

# Business Edition 6000S Software Load Summary Export Restricted Version 10X11X-K9-09

This document details the software that has been preloaded on the server module of this product for your convenience.

Every attempt is made to keep the software versions in this build as up to date as possible; however, it may be the case that newer code has been released since this product was manufactured. Before using this software, please ensure that you have the latest versions, available either from [Cisco Software Center](#) (CSC), or via [Cisco Electronic Software Delivery](#) (eSD). Details of how to use Electronic Software Delivery are provided via email when ordering licenses for your chosen applications. Table 2 below lists the included files and indicates where they may be found online for download.

## Installed Applications

Business Edition 6000S server modules ship with a number of application virtual machines preinstalled to simplify system deployment. Unified communications applications are installed to the “skip” configuration point, meaning that they are ready to accept system configuration and complete installation when first started.

Configuration for “skip” installed applications may be entered using the system wizard via the virtual machine console, or by providing a platformConfig.xml configuration file. The installation process completes without further interaction after providing this configuration. Refer to the [Business Edition 6000S Installation Guide](#) for further information. Table 1 summarizes the installed applications for this build.

**Table 1.** Preinstalled Applications (New and updated software **highlighted**)

Application	Version	Scale	Pre-installation Method
<b>Cisco Unified Communications Manager</b>	<b>11.5(1)SU2</b>	150 Users	Partial (skip) installed application
<b>Cisco Unified Communications Manager IM &amp; Presence</b>	<b>11.5(1)SU2</b>	150 Users	Partial (skip) installed application
<b>Cisco Unity Connection</b>	<b>11.5(1)SU2</b>	150 Users	Partial (skip) installed application
Cisco Paging Server	11.5(2)	Standard	Deployed application OVA
<b>Cisco Prime Collaboration Provisioning</b>	<b>11.6</b>	300 Devices	Deployed application OVA

## Preloaded Applications - Version Choice

The hypervisor datastore on the server module includes installation files for Collaboration Solution Release 10 and 11 unified communications (UC) applications (Cisco Unified Communications Manager, Cisco Unity Connection and Cisco Unified Communications Manager Instant Messaging and Presence Server). You may use included versions of Cisco Paging Server and Prime Collaboration Provisioning with either of these UC releases. Unified communications version 10 or 11 applications must be used together.

Table 2 details the files included in the datastore and indicates which to use for either a version 10 or 11 unified communications solution. No other applications are supported by the BE6000S at this time.

**Table 2.** Preloaded Software

Application / File	Filename	Access	Version 10 Solution	Version 11 Solution
<b>Cisco Unified Communications Manager &amp; Cisco Unity Connection<sup>1</sup></b>				
- Common version 10.5(2) application image	Bootable_UCSInstall_UCOS_10.5.2.10000-5.sgn.iso	eSD	✓

<sup>1</sup> Version 10 and 11 upgrade images are available via eSD.

## Patch Files

Where patches and updates for the latest software are available at the time of building the manufacturing image, these have been included in the datastore for your convenience. For UC applications, patch files (also known as COP files) have been bundled in iso format and stored in the /OVA-ISO/App\_Patches/ datastore directory. To use these files, simply connect the appropriate iso image to your UC virtual machine, then follow your application documentation to install the patch(es) from “DVD”.

**Note:** Please check <http://software.cisco.com> for any additional patches or updates that may have been released since the issue of this document.

The following table details the patches included in this release. Please check release information for each patch before applying. In most cases, all patches should be applied immediately after application install completes.

Application Patches and Updates	
<b>Cisco Unified Communications Manager 10.5</b> (UCM10_COP_Files.iso)	
Olson 2016g DST update for 10.5(2x)	<a href="#">ciscocm.dst-updater.2016g-el6-00.10.5.2.cop.sgn</a>
Cisco Unified Communications Manager 10.5(2.15097) Device Package	<a href="#">cmterm-devicepack10.5.2.15097-1.cop.sgn</a>
<b>Cisco Unified Communications Manager 11.5</b> (UCM11_COP_Files.iso)	
Cisco Unified Communications Manager 11.5(1.12022) Device Package	<a href="#">cmterm-devicepack11.5.1.12022-1.cop.sgn</a>

## Locale Files

For additional convenience, software preloads now include locale files for Unified Communications Manager, IM & Presence Server and Unity Connection. Locale files have been packaged in DVD images, allowing them to be installed directly from local media by the applications. Connect the ISO DVD image to your virtual machine using vSphere client prior to installing the locale.

## Additional Software

To ensure consistency across Cisco Collaboration products, licensing purchased with the Business Edition 6000 may also entitle you to use the applications listed in the following table. Software for these applications have not been included in this software bundle as they are not currently supported by the BE6000S. If you would like to use these applications and have the appropriate license and hardware, software may be obtained through eSD or Software Center.

**Table 3.** Additional Software

Application	Entitlement / Requirements	Access
Cisco Prime Collaboration Deployment	Available with all UCM user license purchases. Requires Foundation Hypervisor license for managed hosts.	eSD
Cisco Prime Collaboration Assurance	Standard license available for all UCM deployments.	<a href="#">CSC</a>
Cisco WebEx Meeting Server	Available with CUWL Pro licensing. Requires dedicated server and Foundation Hypervisor license and vSphere license.	eSD
Cisco Prime License Manager	Available as a standalone application if required. Consider using the integrated version provided with each Unified Communications Manager or Unity Connection installation in the first instance.	eSD
Cisco Expressway	Available with all UCM user license purchases.	<a href="#">CSC</a> / eSD
Cisco Telepresence Conductor	Available with CUWL Pro / Personal Multiparty licensing.	<a href="#">CSC</a> / eSD
Cisco Telepresence Server on Virtual Machine	Available with CUWL Pro / Personal Multiparty licensing.	<a href="#">CSC</a> / eSD
