sgw	s8-downlnk-qci7totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI 7 on S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI 7 on S8 interface	Per S-GW Service	Standard
sgw	s8-downlnk-qci7totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI 7 on S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI 7 on S8 interface	Per S-GW Service	Standard
sgw	s8-downlnk-qci8totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI 8 on S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI 8 on S8 interface	Per S-GW Service	Standard
sgw	s8-downlnk-qci8totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI 8 on S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI 8 on S8 interface	Per S-GW Service	Standard
sgw	s8-downlnk-qci9totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI 9 on S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI 9 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci9totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI 9 on S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI 9 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci65totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by S-GW for a bearer with QCI 65 on the S8 interface.	Increments when a S-GW accepts a downlink data byte for a bearer with QCI 65 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci65totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by S-GW for a bearer with QCI 65 on the S8 interface.	Increments when a S-GW accepts a downlink data packet for a bearer with QCI 65 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by S-GW for a bearer with QCI 66 on the S8 interface.	Increments when a S-GW accepts a downlink data byte for a bearer with QCI 66 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by S-GW for a bearer with QCI 66 on the S8 interface.	Increments when a S-GW accepts a downlink data packet for a bearer with QCI 66 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by S-GW for a bearer with QCI 69 on the S8 interface.	Increments when a S-GW accepts a downlink data byte for a bearer with QCI 69 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by S-GW for a bearer with QCI 69 on the S8 interface.	Increments when a S-GW accepts a downlink data packet for a bearer with QCI 69 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by S-GW for a bearer with QCI 70 on the S8 interface.	Increments when a S-GW accepts a downlink data byte for a bearer with QCI 70 on the S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s8-downlnk-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by S-GW for a bearer with QCI 70 on the S8 interface.	Increments when a S-GW accepts a downlink data packet for a bearer with QCI70 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-othertotbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI other than 1 to 9, 65, 66, 69 and 70 on S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI other than 1 to 9, 65, 66, 69 and 70 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-othertotpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI other than 1 to 9, 65, 66, 69 and 70 on S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI other than 1 to 9, 65, 66, 69 and 70 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci1totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI1 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI1 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci1totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI1 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI1 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci2totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI2 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI2 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci2totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI2 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI2 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci3totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI3 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI3 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci3totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI3 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI3 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci4totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI4 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI4 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci4totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI4 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI4 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci5totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI5 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI5 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci5totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI5 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI5 on S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s8-downlnk-drop-qci6totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI5 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI5 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci6totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI6 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI6 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci7totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI7 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI7 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci7totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI7 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI7 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci8totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI8 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI8 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci8totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI8 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI8 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci9totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI9 on S8 interface.	Increments when S-GW drops downlink data byte for bearer with QCI9 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci9totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI9 on S8 interface.	Increments when S-GW drops downlink data packet for bearer with QCI9 on S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci65totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 65 on the S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 65 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci65totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 65 on the S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 65 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 66 on the S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 66 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 66 on the S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 66 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 69 on the S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 69 on the S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s8-downlnk-drop-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 69 on the S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 69 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 70 on the S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 70 on the S8 interface.	Per S-GW Service	Standard
sgw	s8-downlnk-drop-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 70 on the S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 70 on the S8 interface.	Per S-GW Service	Standard

sgw	s5s8-uplnk-drop-qci6totpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW for bearer with QCI6 on S5/S8 interface.	Increments when S-GW drops uplink data packet for bearer with QCI6 on S5/S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s5s8-uplnk-drop-qci7totbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW for bearer with QCI7 on S5/S8 interface.	Increments when S-GW drops uplink data byte for bearer with QCI7 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci7totpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW for bearer with QCI7 on S5/S8 interface.	Increments when S-GW drops uplink data packet for bearer with QCI7 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci8totbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW for bearer with QCI8 on S5/S8 interface.	Increments when S-GW drops uplink data byte for bearer with QCI8 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci8totpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW for bearer with QCI8 on S5/S8 interface.	Increments when S-GW drops uplink data packet for bearer with QCI8on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci9totbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW for bearer with QCI9 on S5/S8 interface.	Increments when S-GW drops uplink data byte for bearer with QCI9 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci9totpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW for bearer with QCI9 on S5/S8 interface.	Increments when S-GW drops uplink data packet for bearer with QCI9 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci65totbyte	INT64	Incremental	active	The total number of uplink data bytes dropped by S-GW for a bearer with QCI 65 on the S5/S8 interface.	Increments when a S-GW drops an uplink data byte for a bearer with QCI 65 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci65totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by S-GW for a bearer with QCI 65 on the S5/S8 interface.	Increments when a S-GW drops an uplink data packet for a bearer with QCI 65 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci66totbyte	INT64	Incremental	active	The total number of uplink data bytes dropped by S-GW for a bearer with QCI 66 on the S5/S8 interface.	Increments when a S-GW drops an uplink data byte for a bearer with QCI 66 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci66totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by S-GW for a bearer with QCI 66 on the S5/S8 interface.	Increments when a S-GW drops an uplink data packet for a bearer with QCI 66 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci69totbyte	INT64	Incremental	active	The total number of uplink data bytes dropped by S-GW for a bearer with QCI 69 on the S5/S8 interface.	Increments when a S-GW drops an uplink data byte for a bearer with QCI 69 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci69totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by S-GW for a bearer with QCI 69 on the S5/S8 interface.	Increments when a S-GW drops an uplink data packet for a bearer with QCI 69 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-qci70totbyte	INT64	Incremental	active	The total number of uplink data bytes dropped by S-GW for a bearer with QCI 70 on the S5/S8 interface.	Increments when a S-GW drops an uplink data byte for a bearer with QCI 70 on the S5/S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s5s8-uplnk-drop-qci70totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by S-GW for a bearer with QCI 70 on the S5/S8 interface.	Increments when a S-GW drops an uplink data packet for a bearer with QCI 70 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-othertotbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW for bearer with QCI other than 1 to 9 on S5/S8 interface.	Increments when S-GW drops uplink data byte for bearer with QCI other than 1 to 9 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-uplnk-drop-otherpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW for bearer with QCI other than 1 to 9 on S5/S8 interface.	Increments when S-GW drops uplink data packet for bearer with QCI other than 1 to 9 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci1totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI1 on S5/S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI1 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci1totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI1 on S5/S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI1 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci2totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI2 on S5/S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI2 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci2totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI2 on S5/S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI2 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci3totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI3 on S5/S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI3 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci3totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI3 on S5/S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI3 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci4totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI4 on S5/S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI4 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci4totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI4 on S5/S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI4 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci5totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI5 on S5/S8 interface.	Increments when S-GW accepts downlink data byte for bearer with QCI5 on S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-qci5totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI5 on S5/S8 interface.	Increments when S-GW accepts downlink data packet for bearer with QCI5 on S5/S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary

sgw	trafpol-downlnk-pkts-xmitted	INT64	Incremental	active	Total downlink packets transmitted with traffic policing.	Increments when downlink packet is transmitted with traffic policing.	Per S-GW Service	Standard
sgw	trafpol-downlnk-bytes-dropped	INT64	Incremental	active	Total downlink bytes dropped with traffic policing.	Increments when downlink byte is dropped with traffic policing.	Per S-GW Service	Standard
sgw	trafpol-downlnk-bytes-low_ip_prec	INT64	Incremental	active	Total downlink bytes marked for low IP precedence with traffic policing.	Increments when downlink byte is marked for low IP precedence with traffic policing.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	trafpol-downlnk-bytes-xmitted	INT64	Incremental	active	Total downlink bytes transmitted with traffic policing.	Increments when downlink byte is transmitted with traffic policing.	Per S-GW Service	Standard
sgw	ddn-notifications-throttled	INT32	Incremental	active	Total number of DDNs throttled.	Increments when DDN message is throttled.	Per S-GW Service	Standard
sgw	lcl-cleanup-bearer-not-in-same-state	INT32	Incremental	active	The total number of EGTPC removals that occurred due to the cleanup bearer not being in the same state.	Increments when EGTPC removes the bearer which is not in same state.	Per S-GW Service	Standard
sgw	lcl-cleanup-bearer-not-in-correct-state	INT32	Incremental	active	The total number of EGTPC removals that occurred due to the cleanup bearer not being in the correct state.	Increments when EGTPC removes the bearer which is not in correct state.	Per S-GW Service	Standard
sgw	lcl-cleanup-dup-data-teid	INT32	Incremental	active	The total number of EGTPC removals that occurred due to duplicate data tunnel endpoint identifiers.	Increments when EGTPC removes call due to the duplicate data tunnel endpoint indentifiers.	Per S-GW Service	Standard
sgw	lcl-cleanup-remote-addr-not-compatible	INT32	Incremental	active	The total number of EGTPC removals that occurred due a remote address that was not compatible.	Increments when EGTPC removes the call due a remote address that was not compatible.	Per S-GW Service	Standard
sgw	lcl-cleanup-bad-peer	INT32	Incremental	active	The total number of EGTPC removals that occurred due to the a bad peer.	Increments when EGTPC removes the call due to bad peer.	Per S-GW Service	Standard
sgw	lcl-cleanup-bearer-ctxt-missing	INT32	Incremental	active	The total number of EGTPC removals that occurred due to the cleanup bearer having a missing context.	Increments when EGTPC removes the call due to the bearer having missing context.	Per S-GW Service	Standard
sgw	ntsr-peer-failure-pdn-retained	INT32	Incremental	active	The total number of PDNs retained for Network Triggered Service Restoration (NTSR) with a peer node failure.	Increments when PDN is retained for NTSR with a peer node failure.	Per S-GW Service	Standard
sgw	ntsr-peer-failure-pdn-restored	INT32	Incremental	active	The total number of PDNs restored for Network Triggered Service Restoration (NTSR) with a peer node failure. PDN is restored after receiving Modify Bearer Request from alternate MME.	Increments when PDN is restored for NTSR with peer node restart after MBR from alternate MME/S4-SGSN.	Per S-GW Service	Standard
sgw	ntsr-peer-failure-pdn-released	INT32	Incremental	active	The total number of PDNs released for Network Triggered Service Restoration (NTSR) with a peer node failure after NTSR session hold timer.	Increments when PDN is released after NTSR session hold timer with a peer node failure.	Per S-GW Service	Standard
sgw	ntsr-peer-restart-pdn-retained	INT32	Incremental	active	The total number of PDNs retained for Network Triggered Service Restoration (NTSR) with a peer node restart.	Increments when PDN is retained for NTSR with a peer node restart.	Per S-GW Service	Standard
sgw	ntsr-peer-restart-pdn-restored	INT32	Incremental	active	The total number of PDNs restored for Network Triggered Service Restoration (NTSR) with peer node restart. PDN is restored after receiving Modify Bearer Request from restarted MME/S4-SGSN.	Increments when PDN is restored for NTSR with peer node restart after MBR from restarted MME/S4-SGSN.	Per S-GW Service	Standard
sgw	ntsr-peer-restart-pdn-released	INT32	Incremental	active	The total number of PDNs released for Network Triggered Service Restoration (NTSR) with a peer node failure after NTSR session hold timer.	Increments when PDN is released after NTSR session hold timer with a peer restart.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	sessstat-pdn-emps-current-active	INT32	Gauge	active	The total number of currently active SGW eMPS PDNs.	Increments when any S-GW PDN is setup as an eMPS PDN or upgrades to an eMPS PDN. Decrements when an eMPS S-GW PDN is released or when it degrades to a non-eMPS PDN.	Per S-GW Service	Standard
sgw	sessstat-pdn-emps-cumulative-activated	INT32	Incremental	active	The total number of SGW PDNs that are either setup as an eMPS PDN or upgrades to an eMPS PDN.	Increments when any S-GW PDN is setup as an eMPS PDN or upgrades to an eMPS PDN.	Per S-GW Service	Standard
sgw	sessstat-pdn-emps-cumulative-deactivated	INT32	Incremental	active	The total number of SGW PDNs that were either released or degrades to a non-eMPS PDN.	Increments when an eMPS S-GW PDN is released or when it degrades to a non-eMPS PDN.	Per S-GW Service	Standard
sgw	sessstat-pdn-dcnr-current-active	INT32	Gauge	active	The total number of currently active SGW DCNR PDNs.	Increments when any S-GW PDN is setup as a DCNR PDN. Decrements when a S-GW DCNR PDN is released.	Per S-GW Service	Standard
sgw	sessstat-pdn-dcnr-cumulative-activated	INT32	Incremental	active	The total number of SGW PDNs that are setup as a DCNR PDN.	Increments when any S-GW PDN is setup as a DCNR PDN.	Per S-GW Service	Standard
sgw	sessstat-pdn-dcnr-cumulative-activated	INT32	Incremental	active	PDN.	PDN.	Per S-GW Service	Standard
sgw	sessstat-pdn-dcnr-cumulative-deactivated	INT32	Incremental	active	The total number of SGW DCNR PDNs released.	Increments when a S-GW DCNR PDN is released .	Per S-GW Service	Standard
sgw	totepsbearactive-qci80	INT32	Gauge	active	Total EPS Bearers Active with QCI value of 80.	Increments when QCI80 bearer is created and decrements when its released.	Per S-GW Service	Standard
sgw	totepsbearactive-qci82	INT32	Gauge	active	Total EPS Bearers Active with QCI value of 82.	Increments when QCI82 bearer is created and decrements when its released.	Per S-GW Service	Standard
sgw	totepsbearactive-qci83	INT32	Gauge	active	Total EPS Bearers Active with QCI value of 83.	Increments when QCI83 bearer is created and decrements when its released.	Per S-GW Service	Standard
sgw	totepsbearsetup-qci80	INT32	Incremental	active	Total EPS Bearers Setup with QCI value of 80.	Increments when QCI80 bearer is setup.	Per S-GW Service	Standard
sgw	totepsbearsetup-qci82	INT32	Incremental	active	Total EPS Bearers Setup with QCI value of 82.	Increments when QCI82 bearer is setup.	Per S-GW Service	Standard
sgw	totepsbearsetup-qci83	INT32	Incremental	active	Total EPS Bearers Setup with QCI value of 83.	Increments when QCI83 bearer is setup.	Per S-GW Service	Standard
sgw	totepsbearrel-qci80	INT32	Incremental	active	Total EPS Bearers Released with QCI value of 80 .	Increments when QCI80 EPS bearer is released.	Per S-GW Service	Standard
sgw	totepsbearrel-qci82	INT32	Incremental	active	Total EPS Bearers Released with QCI value of 82 .	Increments when QCI82 EPS bearer is released.	Per S-GW Service	Standard
sgw	totepsbearrel-qci83	INT32	Incremental	active	Total EPS Bearers Released with QCI value of 83 .	Increments when QCI83 EPS bearer is released.	Per S-GW Service	Standard
sgw	totepsbearmod-qci80	INT32	Incremental	active	Total EPS Bearers Modified with QCI value of 80.	Increments when QCI80 EPS bearer is modified.	Per S-GW Service	Standard
sgw	totepsbearmod-qci82	INT32	Incremental	active	Total EPS Bearers Modified with QCI value of 82.	Increments when QCI82 EPS bearer is modified.	Per S-GW Service	Standard
sgw	totepsbearmod-qci83	INT32	Incremental	active	Total EPS Bearers Modified with QCI value of 83.	Increments when QCI83 EPS bearer is modified.	Per S-GW Service	Standard

sgw	s5s8-downlnk-drop-qci80totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 80 on the S5/S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 80 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-drop-qci82totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 82 on the S5/S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 82 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-drop-qci83totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by S-GW for a bearer with QCI 83 on the S5/S8 interface.	Increments when a S-GW drops a downlink data byte for a bearer with QCI 83 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-drop-qci80totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 80 on the S5/S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 80 on the S5/S8 interface.	Per S-GW Service	Standard
sgw	s5s8-downlnk-drop-qci82totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 82 on the S5/S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 82 on the S5/S8 interface.	Per S-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
sgw	s5s8-downlnk-drop-qci83totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by S-GW for a bearer with QCI 83 on the S5/S8 interface.	Increments when a S-GW drops a downlink data packet for a bearer with QCI 83 on the S5/S8 interface.	Per S-GW Service	Standard
pgw	vpnname	STRING	Primary-key	active	The name of the context configured on the system that is currently facilitating the P-GW service.	Configuration	Per Context	Standard
pgw	vpnid	INT32	Primary-key	active	The identification number of the context configured on the system that is currently facilitating the P-GW service. This is an internal reference number.	Generated During System Startup	Per Context	Standard
pgw	servname	STRING	Primary-key	active	Displays the name of the P-GW service for which the statistics are displayed.	Configuration	Per PGW Service	Standard
pgw	servid	INT32	Primary-key	active	The identification number of the service configured on the system that is currently facilitating the P-GW service. This is an internal reference number.	Generated During System Startup	Per P-GW Service	Standard
pgw	sess-cur	INT32	Gauge	active	The total number of sessions currently established on this system.	Increments on PGW call establishment. Decrements on PGW call release.	Per P-GW Service	Standard
pgw	ue-active	INT32	Gauge	active	The total number of active subscribers.	Increments on PGW Call establishment. Decrements on PGW Call release.	Per P-GW Service	Standard
pgw	ue-s6b-assume-positive	INT32	Gauge	active	Current S6b assumed positive subscriber count.	Total number of active subscribers for which S6b auth assumed positive.	Per P-GW Service	Standard
pgw	sessstat-bearact-def	INT32	Gauge	active	Session Statistics - Total default bearers active	Increments on PGW Call establishment. Decrements on PGW Call release.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-def	INT32	Gauge	active	Session Statistics - Total emergency default bearers active.	Increments on PGW Emergency call establishment. Decrements on PGW Emergency call release.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-auth-imsi-def	INT32	Gauge	active	Session Statistics - Total emergency default bearers (Auth-IMSI) active.	Increments when PGW Authorized IMSI Emergency default bearer is created. Decrements when PGW Authorized IMSI Emergency default bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-unauth-imsi-def	INT32	Gauge	active	Session Statistics - Total emergency default bearers (Unauth-IMSI) active.	Increments when PGW Un-authorized IMSI Emergency default bearer is created. Decrements when PGW Un-authorized IMSI Emergency default bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-only-imei-def	INT32	Gauge	active	Session Statistics - Total emergency default bearers (Only IMEI) active.	Increments when PGW IMEI-only Emergency default bearer is created. Decrements when PGW IMEI-only Emergency default bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-ded	INT32	Gauge	active	Session Statistics - Total dedicated bearers active	Increments when PGW Dedicated bearer is created. Decrements when PGW Dedicated bearer is deleted.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-bearact-ue-init-ded	INT32	Gauge	active	Session Statistics - Total bearers active - UE-initiated	Increments when PGW UE-initiated Dedicated bearer is created. Decrements when PGW UE-initiated Dedicated bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-nw-init-ded	INT32	Gauge	active	Session Statistics - Total bearers active - Network-initiated	Increments when PGW Network-initiated Dedicated bearer is created. Decrements when PGW Network-initiated Dedicated bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-ded	INT32	Gauge	active	Session Statistics - Total emergency dedicated bearers active	Increments when PGW Emergency dedicated bearer created. Decrements when PGW Emergency dedicated bearer deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-auth-imsi-ded	INT32	Gauge	active	Session Statistics - Total emergency dedicated bearers (Auth-IMSI) active	Increments when PGW Authorized IMSI Emergency dedicated bearer is created. Decrements when PGW Authorized IMSI Emergency dedicated bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-unauth-imsi-ded	INT32	Gauge	active	Session Statistics - Total emergency dedicated bearers (Unauth-IMSI) active	Increments when PGW Un-authorized IMSI Emergency dedicated bearer is created. Decrements when PGW Un-authorized IMSI Emergency dedicated bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-emergency-only-imei-ded	INT32	Gauge	active	Session Statistics - Total emergency dedicated bearers (Only IMEI) active	Increments when PGW IMEI-only Emergency dedicated bearer is created. Decrements when PGW IMEI-only Emergency dedicated bearer is deleted.	Per P-GW Service	Standard
pgw	sessstat-bearact-nw-init-ded-att	INT32	Gauge	active	Session Statistics - Total bearers - Network-initiated dedicated bearers attempted	Network-initiated dedicated bearers creation attempted.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-def	INT32	Incremental	active	Session Statistics - Total default bearers setup.	Increments whenever a default bearer gets created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-def	INT32	Incremental	active	Session Statistics - Total emergency default bearers setup	Increments whenever an Emergency call is setup.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-auth-imsi-def	INT32	Incremental	active	Session Statistics - Total emergency default bearers (Auth-IMSI) setup	Increments whenever an Authorized IMSI emergency call setup.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-unauth-imsi-def	INT32	Incremental	active	Session Statistics - Total emergency default bearers (Unauth-IMSI) setup	Increments whenever an Un-authorized IMSI emergency call setup.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-only-imei-def	INT32	Incremental	active	Session Statistics - Total emergency default bearers (Only IMEI) setup	Increments whenever an IMEI-only emergency call setup.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-ded	INT32	Incremental	active	Session Statistics - Total dedicated bearers setup	Increments whenever a Dedicated bearer created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-ue-init-ded	INT32	Incremental	active	Session Statistics - Total bearers setup - Dedicated bearers - UE-intitiated	Increments whenever an UE-Initiated dedicated bearer created.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-bearsetup-nw-init-ded	INT32	Incremental	active	Session Statistics - Total bearers setup - Dedicated bearers - Network-initiated	Increments whenever a Network-Initiated dedicated bearers created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-ded	INT32	Incremental	active	Session Statistics - Total emergency dedicated bearers setup	Increments whenever an Emergency dedicated bearer created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-auth-imsi-ded	INT32	Incremental	active	Session Statistics - Total emergency dedicated bearers (Auth-IMSI) setup	Increments whenever an Authorized IMSI emergency dedicated bearer created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-unauth-imsi-ded	INT32	Incremental	active	Session Statistics - Total emergency dedicated bearers (Unauth-IMSI) setup	Increments whenever an Un-authorized IMSI emergency dedicated bearer created.	Per P-GW Service	Standard
pgw	sessstat-bearsetup-emergency-only-imei-ded	INT32	Incremental	active	Session Statistics - Total emergency dedicated bearers (Only IMEI) setup	Increments whenever an IMEI-only emergency dedicated bearer created.	Per P-GW Service	Standard
pgw	sessstat-bearrel-def	INT32	Incremental	active	Session Statistics - Total default bearers released	Increments whenever a Call is released	Per P-GW Service	Standard
pgw	sessstat-bearrel-ded	INT32	Incremental	active	Session Statistics - Total dedicated bearers released	Increments whenever a Dedicated bearer is deleted	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefadmin	INT32	Incremental	active	Session Statistics - Total default bearers released due to Admin disconnect	Increments whenever a Default Bearer is deleted due to Admin disconnect.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefgtp	INT32	Incremental	active	Session Statistics - Total default bearers released due to GTP-U error ind	Increments whenever a Default Bearer deleted due to GTP-U error ind.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefsgw	INT32	Incremental	active	Session Statistics - Total default bearers released due to S-GW Path failure	Increments whenever a Default Bearer deleted due to S-GW path failure.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefs4sgsn	INT32	Incremental	active	Session Statistics - Total default bearers released due to S4 SGSN initiated release	Increments whenever a PDN session is released by S4 SGSN (2G & 3G).	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefmme	INT32	Incremental	active	Session Statistics - Total default bearers released due to MME initiated release	Increments whenever a PDN session is released by MME (4G).	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdeflocalfallbacktimeout	INT32	Incremental	active	Session Statistics - Total default bearers released due to local policy initiated release after timeout.	Whenever a P-GW call falls back to a local (QoS) policy, the policy can have a timer configured for fallback events. When this timer expires, and the policy activates an action to terminate the session, this counter is incremented.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdefpcscf	INT32	Incremental	active	Total default bearers released due to UE P-CSCF Reselection not being supported.	Increments whenever a default bearer is deleted when P-CSCF Restoration happens without UE P-CSCF Reselection capability.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdedadmin	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to Admin disconnect	Increments whenever a Dedicated Bearer deleted due to Admin disconnect.	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdedgtp	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to GTP-U error ind	Increments whenever a Dedicated Bearer deleted due to GTP-U error ind	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-bearrel-nwdedmme	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to MME initiated release	Increments whenever a Dedicated Bearer deleted due to MME initiated release	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdeddefbear	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to Default bearer release	Increments whenever a Dedicated Bearer deleted due to default bearer deletion	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdedgxdisc	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to GX Disconnect	Increments whenever a Dedicated Bearer deleted due to disconnect from Gx	Per P-GW Service	Standard
pgw	sessstat-bearrel-nwdeds4sgsn	INT32	Incremental	active	Session Statistics - Total dedicated bearers released due to S4 SGSN initiated release	Increments whenever a Dedicated Bearer deleted due to S4 SGSN initiated release	Per P-GW Service	Standard
pgw	sessstat-bearrelfail-def	INT32	Incremental	active	Session Statistics - Total bearers release failure - Default bearers	Increments whenever a Default bearer deletion fails	Per P-GW Service	Standard
pgw	sessstat-bearrelfail-ded	INT32	Incremental	active	Session Statistics - Total bearers release failure - Dedicated bearers	Increments whenever a Dedicated bearer deletion fails	Per P-GW Service	Standard
pgw	sessstat-bearrej-def	INT32	Incremental	active	Session Statistics - Total bearers rejected - Default bearers.	Increments whenever a default bearer creation gets rejected.	Per P-GW Service	Standard
pgw	sessstat-bearrej-ded	INT32	Incremental	active	Session Statistics - Total bearers rejected - Dedicated bearers	Increments whenever a dedicated bearer creation gets rejected.	Per P-GW Service	Standard
pgw	sessstat-bearrej-emergency-def	INT32	Incremental	active	Session Statistics - Total bearers rejected - Emergency default bearers	Increments whenever an emergency default bearer creation gets rejected.	Per P-GW Service	Standard
pgw	sessstat-bearrej-emergency-ded	INT32	Incremental	active	Session Statistics - Total bearers rejected - Emergency dedicated bearers	Increments whenever an emergency dedicated bearer creation gets rejected.	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource	Increments whenever a bearer creation gets rejected due to No resource.	Per P-GW Service	Standard
pgw	sessstat-bearrej-uereq	INT32	Incremental	active	Session Statistics - Total bearers rejected - UE-req reject	Increments whenever an ue-requested bearer creation gets rejected.	Per P-GW Service	Standard
pgw	sessstat-bearrej-uereq-nores	INT32	Incremental	active	Session Statistics - Total bearers rejected - UE-req reject - No Resource	Increments whenever an UE-requested bearer creation gets rejected due to No resource.	Per P-GW Service	Standard
pgw	sessstat-bearrej-misapn	INT32	Incremental	active	Session Statistics - Total bearers rejected - Missing or unknown APN	Increments whenever a bearer creation gets rejected due to missing or unknown APN	Per P-GW Service	Standard
pgw	sessstat-bearrej-nwreq	INT32	Incremental	active	Session Statistics - Total bearers rejected - Network-req reject	Increments whenever an network-requested bearer creation gets rejected.	Per P-GW Service	Standard

pgw	sessstat-rat-init-geran	INT32	Incremental	active	Number of initiated GERAN PDNs	Incremented when new PDN request is received for RAT Type GERAN	Per PGW Service	Standard
pgw	sessstat-rat-init-ehrpd	INT32	Incremental	active	Number of initiated EHRPD PDNs	Incremented when new PDN request is received for RAT Type EHRPD	Per PGW Service	Standard
pgw	sessstat-rat-init-s2a-gtp	INT32	Incremental	active	Number of initiated S2a GTP PDNs (with RAT Type WIRELESS_LAN)	Incremented when new PDN request is received for RAT Type WIRELESS_LAN on S2a GTP	Per PGW Service	Standard
pgw	sessstat-rat-init-s2b-gtp	INT32	Incremental	active	Number of initiated S2b GTP PDNs (with RAT Type WIRELESS_LAN)	Incremented when new PDN request is received for RAT Type WIRELESS_LAN on S2b GTP	Per PGW Service	Standard
pgw	sessstat-rat-init-nb-iot-gtp	INT32	Incremental	active	Number of initiated NB-IoT PDNs (with RAT Type NB-IoT)	Incremented when new PDN request is received for RAT Type NB-IoT	Per PGW Service	Standard
pgw	sessstat-rat-init-s2b-pmip	INT32	Incremental	active	Number of initiated S2b PMIP PDNs (with RAT Type WIRELESS_LAN)	Incremented when new PDN request is received for RAT Type WIRELESS_LAN on S2b PMIP	Per PGW Service	Standard
pgw	sessstat-pdn-ipv4active	INT32	Gauge	active	Session Statistics - Total PDN-Type Statistics - IPv4 Active	Increments when IPv4 PDN is activated. Decrements when IPv4 PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv4setup	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv4 Setup	Increments when IPv4 PDN is setup.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv4rel	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv4 Released	Increments when IPv4 PDN is released.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-pdn-ipv6active	INT32	Gauge	active	Session Statistics - Total PDN-Type Statistics - IPv6 Active	Increments when IPv6 PDN is activated. Decrements when IPv6 PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv6setup	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv6 Setup	Increments when IPv6 PDN is setup.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv6rel	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv6 Released	Increments when IPv6 PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv4v6active	INT32	Gauge	active	Session Statistics - Total PDN-Type Statistics - IPv4v6 Active	Increments when IPv4v6 PDN is activated. Decrements when IPv4v6 PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv4v6setup	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv4v6 Setup	Increments when IPv4v6 PDN is setup.	Per P-GW Service	Standard
pgw	sessstat-pdn-ipv4v6rel	INT32	Incremental	active	Session Statistics - Total PDN-Type Statistics - IPv4v6 Released	Increments when IPv4v6 PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-emps-current-active	INT32	Gauge	active	Session Statistics - eMPS PDN-Type Statistics - Current Active	Increments when any PDN is setup as an eMPS PDN or upgrades to an eMPS PDN. Decrements when an eMPS PDN is released or when it degrades to a non-eMPS PDN.	Per P-GW Service	Standard
pgw	sessstat-pdn-emps-cumulative-activated	INT32	Incremental	active	Session Statistics - eMPS PDN-Type Statistics - Cumulative PDNs Activated	Increments when any PDN is setup as an eMPS PDN or upgrades to an eMPS PDN.	Per P-GW Service	Standard
pgw	sessstat-pdn-emps-cumulative-deactivated	INT32	Incremental	active	Session Statistics - eMPS PDN-Type Statistics - Cumulative PDNs Deactivated	Increments when an eMPS PDN is released or when it degrades to a non-eMPS PDN.	Per P-GW Service	Standard
pgw	sessstat-pdn-dcnr-current-active	INT32	Gauge	active	Session Statistics - DCNR PDN-Type Statistics - Current Active	Increments when any PDN is setup as an DCNR PDN. Decrements when an DCNR PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-dcnr-cumulative-activated	INT32	Incremental	active	Session Statistics - DCNR PDN-Type Statistics - Cumulative PDNs Activated	Increments when any PDN is setup as an DCNR PDN.	Per P-GW Service	Standard
pgw	sessstat-pdn-dcnr-cumulative-deactivated	INT32	Incremental	active	Session Statistics - DCNR PDN-Type Statistics - Cumulative PDNs Deactivated	Increments when an DCNR PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-non-ip-active	INT32	Gauge	active	This statistic indicates the total number of active non-IP PDNs at P-GW	Increments when non-IP PDN is activated. Decrements when non-IP PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-non-ip-setup	INT32	Incremental	active	This statistic indicates the total number of non-IP PDNs setup at P-GW	Increments when non-IP PDN is setup.	Per P-GW Service	Standard
pgw	sessstat-pdn-non-ip-rel	INT32	Incremental	active	This statistic indicates the total number of non-IP PDNs released at P-GW	Increments when non-IP PDN is released.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-1	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 1.	Increments when PDN connection is established for Restoration-Priority-Level 1. Decrements when PDN connection is released for Restoration-Priority-Level 1.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-pdn-restore-priority-2	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 2.	Increments when PDN connection is established for Restoration-Priority-Level 2. Decrements when PDN connection is released for Restoration-Priority-Level 2.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-3	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 3.	Increments when PDN connection is established for Restoration-Priority-Level 3. Decrements when PDN connection is released for Restoration-Priority-Level 3.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-4	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 4.	Increments when PDN connection is established for Restoration-Priority-Level 4. Decrements when PDN connection is released for Restoration-Priority-Level 4.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-5	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 5.	Increments when PDN connection is established for Restoration-Priority-Level 5. Decrements when PDN connection is released for Restoration-Priority-Level 5.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-6	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 6.	Increments when PDN connection is established for Restoration-Priority-Level 6. Decrements when PDN connection is released for Restoration-Priority-Level 6.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-7	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 7.	Increments when PDN connection is established for Restoration-Priority-Level 7. Decrements when PDN connection is released for Restoration-Priority-Level 7.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-8	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 8.	Increments when PDN connection is established for Restoration-Priority-Level 8. Decrements when PDN connection is released for Restoration-Priority-Level 8.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-9	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 9.	Increments when a PDN connection is established for Restoration-Priority-Level 9. Decrements when a PDN connection is released for Restoration-Priority-Level 9.	Per P-GW Service	Standard
pgw	sessstat-pdn-restore-priority-10	INT32	Gauge	active	The current number of PDN connections for Restoration-Priority-Level 10.	Increments when a PDN connection is established for Restoration-Priority-Level 10. Decrements when a PDN connection is released for Restoration-Priority-Level 10.	Per P-GW Service	Standard

pgw	sessstat-sgwrstr-dnlkbytedrop	INT64	Incremental	active	Total number of Downlink bytes dropped in SGW Restoration state	Incremented when downlink byte is dropped in SGW Restoration state	Per P-GW Service	Standard
pgw	handoverstat-ltetoS2bPMIPatt	INT32	Incremental	active	Handover Statistics - Number of LTE to S2bPMIP attempted handovers	Incremented when LTE to S2bPMIP Handover is attempted	Per P-GW Service	Standard
pgw	handoverstat-ltetoS2bPMIPsucc	INT32	Incremental	active	Handover Statistics - Number of LTE to S2bPMIP successful handovers	Incremented when LTE to S2bPMIP Handover is successful	Per P-GW Service	Standard
pgw	handoverstat-ltetoS2bPMIPfail	INT32	Incremental	active	Handover Statistics - Number of LTE to S2bPMIP failed handovers	Incremented when LTE to S2bPMIP Handover fails	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtolteatt	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to LTE attempted handovers	Incremented when S2bPMIP to LTE Handover is attempted	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtoltesucc	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to LTE successful handovers	Incremented when S2bPMIP to LTE Handover is successful	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtoltefail	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to LTE failed handovers	Incremented when S2bPMIP to LTE Handover is failed	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtoehrpdatt	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to eHRPD attempted handovers	Increments when S2bPMIP to eHRPD Handover is attempted	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtoehrpdsucc	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to eHRPD successful handovers	Incremented when S2bPMIP to eHRPD Handover is successful	Per P-GW Service	Standard
pgw	handoverstat-S2bPMIPtoehrpdfail	INT32	Incremental	active	Handover Statistics - Number of S2bPMIP to eHRPD failed handovers	Incremented when S2bPMIP to eHRPD Handover is failed	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	handoverstat-ehrpdtoS2bPMIPatt	INT32	Incremental	active	Handover Statistics - Number of eHRPD to S2bPMIP attempted handovers	Incremented when eHRPD to S2bPMIP Handover is attempted	Per P-GW Service	Standard
pgw	handoverstat-ehrpdtoS2bPMIPsucc	INT32	Incremental	active	Handover Statistics - Number of eHRPD to S2bPMIP successful handovers	Incremented when eHRPD to S2bPMIP Handover is successful	Per P-GW Service	Standard
pgw	handoverstat-ehrpdtoS2bPMIPfail	INT32	Incremental	active	Handover Statistics - Number of eHRPD to S2bPMIP failed handovers	Incremented when eHRPD to S2bPMIP Handover is failed	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-s6brad-ip	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - s6b or radius ip validation failed	Increments when bearer is rejected due to s6b or radius ip validation failure	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-ims-auth-failed	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - IMS - Auth-Failed	Increments when bearer is rejected due to IMS Authentication failure	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-chrgsvc-auth-failed	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - Charging service - Auth-Failed	Increments when bearer is rejected due to Charging service Authentication failure	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-dhcp-ip-failed	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - DHCP - IP-Alloc -Failed	Increments when bearer is rejected due to DHCP IP Allocation failure	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-setup-timeout	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - Setup- Timeout	Increments when bearer is rejected due to Setup Timer timeout	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-aaa-auth-exceed	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - AAA - Auth-Exceeded	Increments when bearer is rejected due to AAA Authetication exceed	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-no-sess-aaa	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - No sessions - AAA	Increments when bearer is rejected due to no sessions at AAA	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-conflict-ip-addr	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - Conflict - IP address	Increments when bearer is rejected due to conflict in IP address	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-static-ip	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - Static - IP - Not - Present	Increments when bearer is rejected due to invalid Static IP	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-msreq-invalid-ip	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - MS Request - Invalid-IP	Increments when bearer is rejected due to invalid IP in MS Request	Per P-GW Service	Standard
pgw	sessstat-bearrej-nores-other-reason	INT32	Incremental	active	Session Statistics - Total bearers rejected - No Resource - Other Reason	Increments when bearer is rejected due to any reason other than s6b or radius ip validation failure, IMS authentication failure, Charging service authentication failure, DHCP IP aloocation failure, Setup timer timeout, AAA Authentication exceed, No sessions at AAA, Confliction IP Address, Invalid static IP or invalid IP in MS request	Per P-GW Service	Standard

pgw	epdg-sel-ipv4-pco-req-rcvd	INT32	Incremental	active	The total number of DNS requests made to a P-GW in a PCO IE for IPv4 ePDG addresses.	Increments when a P-GW receives a request from a UE for IPv4 ePDG addresses in a PCO IE.	Per PGW	Proprietary
pgw	epdg-sel-ipv4-pco-rsp-sent	INT32	Incremental	active	The total number of successful DNS responses sent by the P-GW in a PCO IE populated with IPv4 ePDG addresses.	Increments when a P-GW sends a response consisting of IPv4 ePDG addresses in a PCO IE.	Per PGW	Proprietary
pgw	epdg-sel-ipv4-pco-rsp-fail-conf-absent	INT32	Incremental	active	The total number of unsuccessful responses for IPv4 ePDG addresses due to a missing FQDN configuration.	Increments when a P-GW fails torespond with IPv4 ePDG addresses in a PCO IE due to a missing FQDN configuration.	Per PGW	Proprietary
pgw	epdg-sel-ipv4-pco-rsp-fail-dns-query-failed	INT32	Incremental	active	The total number of DNS queries for IPv4 ePDG addresses that failed or expired.	Increments when a P-GW fails to respond with IPv4 ePDG addresses in a PCO IE due to failed or expired DNS queries.	Per PGW	Proprietary
pgw	epdg-sel-ipv6-pco-req-rcvd	INT32	Incremental	active	The total number of DNS requests made to a P-GW in a PCO IE for IPv4 ePDG addresses.	Increments when a P-GW receives a request from a UE for IPv6 ePDG addresses in a PCO IE.	Per PGW	Proprietary
pgw	epdg-sel-ipv6-pco-rsp-sent	INT32	Incremental	active	The total number of successful DNS responses sent by the P-GW in a PCO IE populated with IPv6 ePDG addresses.	Increments when a P-GW sends a response consisting of IPv6 ePDG addresses in a PCO IE.	Per PGW	Proprietary
pgw	epdg-sel-ipv6-pco-rsp-fail-conf-absent	INT32	Incremental	active	The total number of unsuccessful responses for IPv6 ePDG addresses due to a missing FQDN configuration.	Increments when a P-GW fails to respond with IPv6 ePDG addresses in a PCO IE due to a missing FQDN configuration.	Per PGW	Proprietary
pgw	epdg-sel-ipv6-pco-rsp-fail-dns-query-failed	INT32	Incremental	active	The total number of DNS queries for IPv6 ePDG addresses that failed or expired.	Increments when a P-GW fails to respond with IPv6 ePDG addresses in a PCO IE due to failed or expired DNS queries.	Per PGW	Proprietary
pgw	sessstat-s6b-pcscf-recovery-count	INT32	Incremental	active	The total number of P-CSCF Restoration Required Indications received from the s6b AAA server through a RAR for a WLAN.	Increments when an s6b RAR is received with P-CSCF Restoration Indication.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-pcrf-pcscf-recovery-count	INT32	Incremental	active	The total number of P-CSCF Restoration Required Indications received from the PCRF through RAR.	Increments when a RAR is received from the PCRF for a P-CSCF Restoration Indication.	Per P-GW Service	Standard
pgw	sessstat-pcscf-recovery-basic-count	INT32	Incremental	active	The total number of basic P-CSCF Restorations performed for restoration indications received from the MME/S-GW.	Increments when basic P-CSCF Restoration is performed for restoration indication received from the MME/S-GW.	Per P-GW Service	Standard
pgw	sessstat-s6b-pcscf-recovery-basic-count	INT32	Incremental	active	The total number of basic P-CSCF Restorations performed for restoration indications received from an s6b AAA server through a RAR for a WLAN.	Increments when basic P-CSCF Restoration is performed for an s6b RAR with a P-CSCF restoration indication.	Per P-GW Service	Standard
pgw	sessstat-pcrf-pcscf-recovery-basic-count	INT32	Incremental	active	The total number of basic P-CSCF Restorations performed for restoration indications received from PCRF through a RAR.	Increments when a basic P-CSCF Restoration is performed for a P-CSCF Restoration Indication RAR received from a PCRF.	Per P-GW Service	Standard
pgw	sessstat-pcscf-recovery-extension-count	INT32	Incremental	active	The total number of P-CSCF Restoration extension performed for restoration indications received from the MME/S-GW.	Increments when a P-CSCF Restoration extension is performed for a restoration indication received from the MME/S-GW.	Per P-GW Service	Standard
pgw	sessstat-s6b-pcscf-recovery-extension-count	INT32	Incremental	active	The total number of P-CSCF Restoration extension performed for restoration indications received from an s6b AAA server through a RAR for a WLAN.	Increments when a P-CSCF Restoration extension is performed for an s6b RAR with a P-CSCF restoration indication.	Per P-GW Service	Standard
pgw	sessstat-pcrf-pcscf-recovery-extension-count	INT32	Incremental	active	The total number of P-CSCF Restoration extension performed for restoration indications received from a PCRF through a RAR.	Increments when a P-CSCF Restoration extension is performed for a P-CSCF Restoration Indication RAR received from a PCRF.	Per P-GW Service	Standard
pgw	sessstat-nonstdqci-nongbr-bearrel-ded-idle-inact	INT32	Incremental	active	The total number of P-GW/GGSN non-GBR dedicated bearers with a non-standard QCI released due to an idle or bearer inactivity timeout.	Increments when a P-GW/GGSN non-GBR dedicated bearer with a non-standard QCI is released due to an idle or bearer inactivity timeout.	Per P-GW Service	Standard
pgw	sessstat-nonstdqci-gbr-bearrel-ded-idle-inact	INT32	Incremental	active	The total number of P-GW/GGSN GBR dedicated bearers with a non-standard QCI released due to an idle or bearer inactivity timeout.	Increments when a P-GW/GGSN GBR dedicated bearer with a non-standard QCI is released due to an idle or bearer inactivity timeout.	Per P-GW Service	Standard
pgw	sessstat-stdqci-nongbr-bearrel-ded-idle-inact	INT32	Incremental	active	The total number of P-GW/GGSN non-GBR dedicated bearers with a standard QCI released due to an idle or bearer inactivity timeout.	Increments when a P-GW/GGSN non-GBR dedicated bearer with a standard QCI is released due to an idle or bearer inactivity timeout.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	sessstat-stdqci-gbr-bearrel-ded-idle-inact	INT32	Incremental	active	The total number of P-GW/GGSN GBR dedicated bearers with a standard QCI released due to an idle or bearer inactivity timeout.	Increments when a P-GW/GGSN GBR dedicated bearer with a standard QCI is released due to an idle or bearer inactivity timeout.	Per P-GW Service	Standard
pgw	ue-in-psm	INT32	Gauge	active	Number of UEs currently in eDRx mode	Increments when a P-GW call goes to eDRx mode and decrements when it moves out of eDRx	Per P-GW Service	Standard
pgw	sessstat-rej-pdn-backofftimer	INT32	Incremental	active	Number of LAPI (Low Access Priority Indicator) PDN sessions that are rejected due to overload (e.g. M2M sessions).	Incremented when Create Session Request is received with Signal Priority IE or PDN is configured as LAPI (Low Access Priority Indicator) and system is in overload state and Backoff timer is configured for the APN(s).	Per PGW Service	Standard
pgw	handoverstat-ltetos2bgtpsucc-timerexpiry	INT32	Incremental	active	Handover Statistics - Number of LTE to GTP S2b successful handovers on Timer Expiry	Incremented when LTE to GTP S2b Handover is successful upon Timer Expiry	Per P-GW Service	Standard
pgw	handoverstat-ltetos2bgtpsucc-uplnkdata	INT32	Incremental	active	Handover Statistics - Number of LTE to GTP S2b successful handovers on Uplink Data on S2b tunnel	Incremented when LTE to GTP S2b Handover is successful upon Uplink Data on S2b tunnel	Per P-GW Service	Standard
pgw	subqosstat-bearact-qci80	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 80	Increments when a subscriber activates a bearer having QCI 80. Decrements when a subscriber releases bearer having QCI 80.	Per P-GW Service	Standard
pgw	subqosstat-bearact-qci82	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 82	Increments when a subscriber activates a bearer having QCI 82. Decrements when a subscriber releases bearer having QCI 82.	Per P-GW Service	Standard
pgw	subqosstat-bearact-qci83	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 83	Increments when a subscriber activates a bearer having QCI 83. Decrements when a subscriber releases bearer having QCI 83.	Per P-GW Service	Standard
pgw	subqosstat-bearsetup-qci80	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 80	Increments when a subscriber establishes a bearer having QCI 80.	Per P-GW Service	Standard
pgw	subqosstat-bearsetup-qci82	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 82	Increments when a subscriber establishes a bearer having QCI 82.	Per P-GW Service	Standard
pgw	subqosstat-bearsetup-qci83	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 83	Increments when a subscriber establishes a bearer having QCI 83.	Per P-GW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
pgw	subqosstat-bearrel-qci80	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 80	Increments when a subscriber releases a bearer having QCI 80.	Per P-GW Service	Standard
pgw	subqosstat-bearrel-qci82	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 82	Increments when a subscriber releases a bearer having QCI 82.	Per P-GW Service	Standard
pgw	subqosstat-bearrel-qci83	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 83	Increments when a subscriber releases a bearer having QCI 83.	Per P-GW Service	Standard
pgw	subdatastat-uppktfwd-qci80	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 80	Increments when a subscriber uplink data packet is forwarded on a bearer with QCI 80.	Per P-GW Service	Standard
pgw	subdatastat-uppktfwd-qci82	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 82	Increments when a subscriber uplink data packet is forwarded on a bearer with QCI 82.	Per P-GW Service	Standard
pgw	subdatastat-uppktfwd-qci83	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 83	Increments when a subscriber uplink data packet is forwarded on a bearer with QCI 83.	Per P-GW Service	Standard
pgw	subdatastat-upbytefwd-qci80	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 80	Increments by the number of subscriber uplink data bytes sent on a bearer with QCI 80.	Per P-GW Service	Standard
pgw	subdatastat-upbytefwd-qci82	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 82	Increments by the number of subscriber uplink data bytes sent on a bearer with QCI 82.	Per P-GW Service	Standard
pgw	subdatastat-upbytefwd-qci83	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 83	Increments by the number of subscriber uplink data bytes sent on a bearer with QCI 83.	Per P-GW Service	Standard
pgw	subdatastat-downpktfwd-qci80	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 80	Increments when a subscriber downlink data packet is forwarded on a bearer with QCI 80	Per P-GW Service	Standard
pgw	subdatastat-downpktfwd-qci82	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 82	Increments when a subscriber downlink data packet is forwarded on a bearer with QCI 82	Per P-GW Service	Standard
pgw	subdatastat-downpktfwd-qci83	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 83	Increments when a subscriber downlink data packet is forwarded on a bearer with QCI 83	Per P-GW Service	Standard
pgw	subdatastat-downbytefwd-qci80	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 80	Increments by the number of subscriber downlink data bytes sent on a bearer with QCI 80.	Per P-GW Service	Standard
pgw	subdatastat-downbytefwd-qci82	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 82	Increments by the number of subscriber downlink data bytes sent on a bearer with QCI 82.	Per P-GW Service	Standard

Increments on SGW PDN establishment with RAT other than EUTRAN, GERAN, UTRAN or RAT changed to other and decrements when other RAT PDN is released or RAT changed from other.	Per SAEGW Service	Standard
saegw	sgw-sessstat-totsetup-ue	INT32	Incremental	active	Total Setup - UE on SGW (part of SAEGW).	Increments when new SGW call is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-totsetup-pdn	INT32	Incremental	active	Total number of PDN's setup on SGW (part of SAEGW).	Increments when a new SGW PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-totcur-pdn-paused-charging	INT32	Gauge	active	Total Current PDN with Paused Charging on SGW (part of SAEGW).	Increments when SGW PDN charging is paused and decrements when charging is again enabled.	Per SAEGW Service	Standard
saegw	sgw-sessstat-totsetup-bearers	INT32	Incremental	active	Total number of Bearers setup on SGW (part of SAEGW).	Increments when new SGW bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetuptype-ipv4	INT32	Incremental	active	Total number of IPv4 PDN setup on SGW (part of SAEGW).	Increments when new IPv4 SGW PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetuptype-ipv6	INT32	Incremental	active	Total number of IPv6 PDN setup on SGW (part of SAEGW).	Increments when new IPv6 SGW PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetuptype-ipv4v6	INT32	Incremental	active	Total number of IPv4v6 PDN setup on SGW (part of SAEGW).	Increments when new IPv4v6 SGW PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetupintrface-s11	INT32	Incremental	active	Total PDNs Setup with Interface - S11 on SGW (part of SAEGW).	Increments when new SGW PDN is setup with S11 interface.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetupintrface-s4	INT32	Incremental	active	Total PDNs Setup with Interface - S4 on SGW (part of SAEGW).	Increments when new SGW PDN is setup with S4 interface.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-sessstat-pdnsetups5proto-gtp	INT32	Incremental	active	Total PDNs Setup with S5 Proto - GTP on SGW (part of SAEGW).	Increments when new SGW PDN setup with S5 proto GTP.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnsetups5proto-pmip	INT32	Incremental	active	Total PDNs Setup with S5 Proto - PMIP on SGW (part of SAEGW).	Increments when new SGW PDN setup with S5 proto PMIP.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrel-ipv4	INT32	Incremental	active	Total IPv4 PDNs Released on SGW (part of SAEGW).	Increments when SGW IPv4 PDN is released.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrel-ipv6	INT32	Incremental	active	Total IPv6 PDNs Released on SGW (part of SAEGW).	Increments when SGW IPv6 PDN is released.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrel-ipv4v6	INT32	Incremental	active	Total IPv4v6 PDNs Released on SGW (part of SAEGW).	Increments when SGW IPv4v6 PDN is released.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-mme	INT32	Incremental	active	Total PDNs Released with reason MME Initiated on SGW (part of SAEGW).	Increments on MME initiated SGW PDN release.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pgw	INT32	Incremental	active	Total PDNs Released with reason PGW Initiated on SGW (part of SAEGW).	Increments when PGW initiated SGW PDN release.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pcrf	INT32	Incremental	active	Total PDNs Released with reason PCRF Initiated on SGW (part of SAEGW).	Increments when PCRF initiated SGW PDN release	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-local	INT32	Incremental	active	Total PDNs Released with local reason on SGW (part of SAEGW).	Increments when SGW PDN is released by local reason.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-s1err	INT32	Incremental	active	Total PDNs Released with reason S1 Error Ind on SGW (part of SAEGW).	Increments when SGW PDN is released by S1 error indication.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-s11err	INT32	Incremental	active	Total PDNs Released with reason S11 Error Ind on SGW (part of SAEGW).	Increments when SGW PDN is released by S11 error indication.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-s5err	INT32	Incremental	active	Total PDNs Released with reason S5 Error Ind on SGW (part of SAEGW).	Increments when SGW PDN is released by S5 error indication.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-s4err	INT32	Incremental	active	Total PDNs Released with reason S4 Error Indication on SGW (part of SAEGW).	Increments when SGW PDN is released by S4 error indication.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-s12err	INT32	Incremental	active	Total PDNs Released with reason S12 Error Ind on SGW (part of SAEGW).	Increments when SGW PDN is released by S12 error indication.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S11	INT32	Incremental	active	Total PDNs Released with reason S11 Path Failure on SGW (part of SAEGW).	Increments when SGW PDN is released by S11 path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S5	INT32	Incremental	active	Total PDNs Released with reason S5 Path Failure on SGW (part of SAEGW).	Increments when SGW PDN is released by S5 path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S5-u	INT32	Incremental	active	Total PDNs Released with reason Path Failure S5-U on SGW (part of SAEGW).	Increments when SGW PDN is released by S5U path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S1-u	INT32	Incremental	active	Total PDNs Released with reason Path Failure S1-U on SGW (part of SAEGW).	Increments when SGW PDN is released by S1U path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S4	INT32	Incremental	active	Total PDNs Released with reason path failure S4 on SGW (part of SAEGW).	Increments when SGW PDN is released by S4 path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S12	INT32	Incremental	active	Total PDNs Released with reason Path Failure S12 on SGW (part of SAEGW).	Increments when SGW PDN is released by S12 path failure.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-sessstat-pdnrelrsn-pathfail-S4-u	INT32	Incremental	active	Total PDNs Released with reason Path Failure S4-U on SGW (part of SAEGW).	Increments when SGW PDN is released by S4U path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-pathfail-S11-u	INT32	Incremental	active	Total PDNs Released with reason Path Failure S11-U on SGW (part of SAEGW).	Increments when SGW PDN is released by S11U path failure.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrelrsn-other	INT32	Incremental	active	Total PDNs Released by local reason/ no resource on SGW (part of SAEGW).	Increments when SGW PDN is released by local reason	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrej-ipv4	INT32	Incremental	active	Total IPv4 PDNs Rejected on SGW (part of SAEGW).	Increments when SGW IPv4 PDN is rejected.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrej-ipv6	INT32	Incremental	active	Total IPv6 PDNs Rejected on SGW (part of SAEGW).	Increments when SGW IPv6 PDN is rejected.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrej-ipv4v6	INT32	Incremental	active	Total IPv4v6 PDNs Rejected on SGW (part of SAEGW).	Increments when SGW IPv4v6 PDN is rejected.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-pgw	INT32	Incremental	active	Total PDNs Rejected with reason P-GW Reject on SGW (part of SAEGW).	Increments when the S-GW receives a PDN Connection Reject from the P-GW.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-license	INT32	Incremental	active	Total PDNs Rejected with reason License limit exceed on SGW (part of SAEGW).	Increments when a New PDN Connection (Initial Attach) is rejected because of License Limit.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-newcall-policy	INT32	Incremental	active	Total PDNs Rejected with reason New Call Policy on SGW (part of SAEGW).	Increments when a New PDN Connection (Initial Attach) is rejected because a New Call Reject Policy is enabled.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-overload	INT32	Incremental	active	Total PDNs Rejected with reason Overload on SGW (part of SAEGW).	Increments when a New PDN Connection (Initial Attach) is rejected because Overload conditions are reached.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-cong	INT32	Incremental	active	Total PDNs Rejected with reason congestion on SGW (part of SAEGW).	Increments when a New PDN Connection (Initial Attach) is rejected because Congestion configuration is applied.	Per SAEGW Service	Standard
saegw	sgw-sessstat-pdnrejrsn-other	INT32	Incremental	active	Total PDNs Rejected with local reason on SGW (part of SAEGW).	Increments when the S-GW PDN is rejected by local reason	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-curr-active-sess	INT32	Gauge	active	Total Current Active Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR is enabled on SGW active call and decrements when ISR is disabled.	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-curr-idle-sess	INT32	Gauge	active	Total Current Idle Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR is enabled on SGW idle call and decrements when ISR is disabled.	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-activations-mme	INT32	Incremental	active	Total MME Activated Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR enabled from MME on SGW call.	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-activations-s4sgsn	INT32	Incremental	active	Total S4-SGSN Activated Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR enabled from S4SGSN on SGW call.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-sessstat-isr-deactivations-mme	INT32	Incremental	active	Total MME Deactivations Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR is disabled from MME on SGW call.	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-deactivations-s4sgsn	INT32	Incremental	active	Total S4-SGSN Deactivations Idle-mode Signaling Reduction Sessions on SGW (part of SAEGW).	Increments when ISR is disabled from MME on SGW call.	Per SAEGW Service	Standard
saegw	sgw-sessstat-isr-deactivations-callclear	INT32	Incremental	active	Total Call Cleared in ISR state on SGW (part of SAEGW).	Increments when call is cleared in ISR state.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci1	INT32	Gauge	active	Total EPS Bearers Active with QCI1 on SGW (part of SAEGW).	Increments when QCI1 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci2	INT32	Gauge	active	Total EPS Bearers Active with QCI2 on SGW (part of SAEGW).	Increments when QCI2 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci3	INT32	Gauge	active	Total EPS Bearers Active with QCI3 on SGW (part of SAEGW).	Increments when QCI3 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci4	INT32	Gauge	active	Total EPS Bearers Active with QCI4 on SGW (part of SAEGW).	Increments when QCI4 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci5	INT32	Gauge	active	Total EPS Bearers Active with QCI5 on SGW (part of SAEGW).	Increments when QCI5 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci6	INT32	Gauge	active	Total EPS Bearers Active with QCI6 on SGW (part of SAEGW).	Increments when QCI6 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci7	INT32	Gauge	active	Total EPS Bearers Active with QCI7 on SGW (part of SAEGW).	Increments when QCI7 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci8	INT32	Gauge	active	Total EPS Bearers Active with QCI8 on SGW (part of SAEGW).	Increments when QCI8 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci9	INT32	Gauge	active	Total EPS Bearers Active with QCI9 on SGW (part of SAEGW).	Increments when QCI9 bearer is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci65	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 65 on the S-GW (part of SAEGW).	Increments when a QCI 65 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci66	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 66 on the S-GW (part of SAEGW).	Increments when a QCI 66 bearer is created and decrements when it is released.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearact-qci69	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 69 on the S-GW (part of SAEGW).	Increments when a QCI 69 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci70	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 70 on the S-GW (part of SAEGW).	Increments when a QCI 70 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-other	INT32	Gauge	active	Total EPS Bearers Active - Other on SGW (part of SAEGW).	Increments when bearer other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci1	INT32	Incremental	active	Total EPS Bearers Setup with QCI 1 on SGW (part of SAEGW).	Increments when QCI1 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci2	INT32	Incremental	active	Total EPS Bearers Setup with QCI 2 on SGW (part of SAEGW).	Increments when QCI2 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci3	INT32	Incremental	active	Total EPS Bearers Setup with QCI 3 on SGW (part of SAEGW).	Increments when QCI3 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci4	INT32	Incremental	active	Total EPS Bearers Setup with QCI 4 on SGW (part of SAEGW).	Increments when QCI4 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci5	INT32	Incremental	active	Total EPS Bearers Setup with QCI 5 on SGW (part of SAEGW).	Increments when QCI5 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci6	INT32	Incremental	active	Total EPS Bearers Setup with QCI 6 on SGW (part of SAEGW).	Increments when QCI6 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci7	INT32	Incremental	active	Total EPS Bearers Setup with QCI 7 on SGW (part of SAEGW).	Increments when QCI7 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci8	INT32	Incremental	active	Total EPS Bearers Setup with QCI 8 on SGW (part of SAEGW).	Increments when QCI8 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci9	INT32	Incremental	active	Total EPS Bearers Setup with QCI 9 on SGW (part of SAEGW).	Increments when QCI9 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci65	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 65 on the S-GW (part of SAEGW).	Increments when a QCI 65 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci66	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 66 on the S-GW (part of SAEGW).	Increments when a QCI 66 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci69	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 69 on the S-GW (part of SAEGW).	Increments when a QCI 69 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci70	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 70 on the S-GW (part of SAEGW).	Increments when a QCI 70 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-other	INT32	Incremental	active	Total EPS Bearers Setup with QCI Other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 on SGW (part of SAEGW).	Increments when bearer is setup with QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-attempt	INT32	Incremental	active	Total EPS Bearers Setup attempts on SGW (part of SAEGW).	Increments when new EPSB bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod	INT32	Incremental	active	Total EPS Bearers Modified on SGW (part of SAEGW).	Increments when EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci1	INT32	Incremental	active	Total EPS Bearers Released with QCI 1 on SGW (part of SAEGW).	Increments when QCI1 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci2	INT32	Incremental	active	Total EPS Bearers Released with QCI 2 on SGW (part of SAEGW).	Increments when QCI2 EPS bearer is released.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearrel-qci3	INT32	Incremental	active	Total EPS Bearers Released with QCI 3 on SGW (part of SAEGW).	Increments when QCI3 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci4	INT32	Incremental	active	Total EPS Bearers Released with QCI 4 on SGW (part of SAEGW).	Increments when QCI4 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci5	INT32	Incremental	active	Total EPS Bearers Released with QCI 5 on SGW (part of SAEGW).	Increments when QCI5 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci6	INT32	Incremental	active	Total EPS Bearers Released with QCI 6 on SGW (part of SAEGW).	Increments when QCI6 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci7	INT32	Incremental	active	Total EPS Bearers Released with QCI 7 on SGW (part of SAEGW).	Increments when QCI7 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci8	INT32	Incremental	active	Total EPS Bearers Released with QCI 8 on SGW (part of SAEGW).	Increments when QCI8 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci9	INT32	Incremental	active	Total EPS Bearers Released with QCI 9 on SGW (part of SAEGW).	Increments when QCI9 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci65	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 65 on the S-GW (part of SAEGW).	Increments when a QCI 65 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci66	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 66 on the S-GW (part of SAEGW).	Increments when a QCI 66 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci69	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 69 on the S-GW (part of SAEGW).	Increments when a QCI 69 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci70	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 70 on the S-GW (part of SAEGW).	Increments when a QCI 70 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-other	INT32	Incremental	active	Total EPS Bearers Released with QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 on SGW (part of SAEGW).	Increments when EPS bearer is released with QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci1	INT32	Incremental	active	Total EPS Bearers Modified with QCI 1 on SGW (part of SAEGW).	Increments when QCI1 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci2	INT32	Incremental	active	Total EPS Bearers Modified with QCI 2 on SGW (part of SAEGW).	Increments when QCI2 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci3	INT32	Incremental	active	Total EPS Bearers Modified with QCI 3 on SGW (part of SAEGW).	Increments when QCI3 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci4	INT32	Incremental	active	Total EPS Bearers Modified with QCI 4 on SGW (part of SAEGW).	Increments when QCI4 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci5	INT32	Incremental	active	Total EPS Bearers Modified with QCI 5 on SGW (part of SAEGW).	Increments when QCI5 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci6	INT32	Incremental	active	Total EPS Bearers Modified with QCI 6 on SGW (part of SAEGW).	Increments when QCI6 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci7	INT32	Incremental	active	Total EPS Bearers Modified with QCI 7 on SGW (part of SAEGW).	Increments when QCI7 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci8	INT32	Incremental	active	Total EPS Bearers Modified with QCI 8 on SGW (part of SAEGW).	Increments when QCI8 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci9	INT32	Incremental	active	Total EPS Bearers Modified with QCI 9 on SGW (part of SAEGW).	Increments when QCI9 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci65	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 65 on the S-GW (part of SAEGW).	Increments when a QCI 65 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci66	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 66 on the S-GW (part of SAEGW).	Increments when a QCI 66 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci69	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 69 on the S-GW (part of SAEGW).	Increments when a QCI 69 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci70	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 70 on the S-GW (part of SAEGW).	Increments when a QCI 70 EPS bearer is modified.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearmod-other	INT32	Incremental	active	Total EPS Bearers Modified with QCI Other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 on SGW (part of SAEGW).	Increments when EPS bearer is modified with QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw	INT32	Incremental	active	Total dedicated EPS Bearers released with reason PGW Initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci1	INT32	Incremental	active	Total dedicated EPS Bearers of QCI1 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI1 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci2	INT32	Incremental	active	Total dedicated EPS Bearers of QCI2 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI2 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci3	INT32	Incremental	active	Total dedicated EPS Bearers of QCI3 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI3 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci4	INT32	Incremental	active	Total dedicated EPS Bearers of QCI4 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI4 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci5	INT32	Incremental	active	Total dedicated EPS Bearers of QCI5 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI5 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci6	INT32	Incremental	active	Total dedicated EPS Bearers of QCI6 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI6 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci7	INT32	Incremental	active	Total dedicated EPS Bearers of QCI7 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI7 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci8	INT32	Incremental	active	Total dedicated EPS Bearers of QCI8 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI8 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci9	INT32	Incremental	active	Total dedicated EPS Bearers of QCI9 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI9 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci65	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 65 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI65 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci66	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 66 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI66 is released with the reason P-GW initiated.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearrel-dedrsn-pgw-qci69	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 69 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI69 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci70	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 70 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI70 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci-other	INT32	Incremental	active	Total dedicated EPS Bearers of QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 released with reason PGW initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI other than QCI1 to QCI9, QCI65, QCI66, QCI69, QCI70, QCI80, QCI82 and QCI83 is released with reason PGW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pcrf	INT32	Incremental	active	Total dedicated EPS Bearers Released with reason PCRF initiated on SGW (part of SAEGW).	Increments when dedicated EPS bearer is released with reason PCRF initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s1err	INT32	Incremental	active	Total dedicated EPS Bearers released with reason S1 error indication on SGW (part of SAEGW).	Increments when dedicated EPS bearer is released with reason S1 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s1err-qci1	INT32	Incremental	active	Total dedicated EPS Bearers of QCI1 released with reason S1 error indication on SGW (part of SAEGW).	Increments when dedicated EPS bearer of QCI1 is released with reason S1 error indication.	Per SAEGW Service	Standard

saegw	sgw-intersgwhaovstat-intersystem-fail	INT32	Incremental	active	Total Inter system Inter-SGW handover failed for S-GW (part of SAEGW)	Increments when Inter system Inter-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intramme	INT32	Incremental	active	Total Intra-MME Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when Intra-MME Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intramme-success	INT32	Incremental	active	Total Intra-MME Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when Intra-MME Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intramme-fail	INT32	Incremental	active	Total Intra-MME Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when Intra-MME Intra-SGW handover is failed	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-intrasgwhaovstat-intermme	INT32	Incremental	active	Total Inter-MME Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when Inter-MME Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intermme-success	INT32	Incremental	active	Total Inter-MME Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when Inter-MME Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intermme-fail	INT32	Incremental	active	Total Inter-MME Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when Inter-MME Intra-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intrasgsn	INT32	Incremental	active	Total Intra-SGSN Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when Intra-SGSN Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intrasgsn-success	INT32	Incremental	active	Total Intra-SGSN Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when Intra-SGSN Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intrasgsn-fail	INT32	Incremental	active	Total Intra-SGSN Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when Intra-SGSN Intra-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intersgsn	INT32	Incremental	active	Total Inter-SGSN Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when Inter-SGSN Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intersgsn-success	INT32	Incremental	active	Total Inter-SGSN Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when Inter-SGSN Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-intersgsn-fail	INT32	Incremental	active	Total Inter-SGSN Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when Inter-SGSN Intra-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-mme-to-sgsn	INT32	Incremental	active	Total MME-to-SGSN Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when MME-to-SGSN Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-mme-to-sgsn-success	INT32	Incremental	active	Total MME-to-SGSN Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when MME-to-SGSN Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-mme-to-sgsn-fail	INT32	Incremental	active	Total MME-to-SGSN Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when MME-to-SGSN Intra-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-sgsn-to-mme	INT32	Incremental	active	Total SGSN-to-MME Intra-SGW handover attempted for S-GW (part of SAEGW)	Increments when SGSN-to-MME Intra-SGW handover is attempted	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-sgsn-to-mme-success	INT32	Incremental	active	Total SGSN-to-MME Intra-SGW handover succeeded for S-GW (part of SAEGW)	Increments when SGSN-to-MME Intra-SGW handover is succeeded	Per SAEGW Service	Standard
saegw	sgw-intrasgwhaovstat-sgsn-to-mme-fail	INT32	Incremental	active	Total SGSN-to-MME Intra-SGW handover failed for S-GW (part of SAEGW)	Increments when SGSN-to-MME Intra-SGW handover is failed	Per SAEGW Service	Standard
saegw	sgw-pagingstat-req	INT32	Incremental	active	Total Paging Requests for S-GW (part of SAEGW)	Increments when S-GW (part of SAEGW) generates paging request	Per SAEGW Service	Standard
saegw	sgw-pagingstat-rej	INT32	Incremental	active	Total Paging Rejects for S-GW (part of SAEGW)	Increments when S-GW (part of SAEGW) generated paging request is rejected	Per SAEGW Service	Standard
saegw	sgw-pagingstat-fail	INT32	Incremental	active	Total Paging Failures for S-GW (part of SAEGW)	Increments when S-GW (part of SAEGW) generated paging request is failed	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-pagingstat-hlcom-success	INT32	Incremental	active	Indicates the total number of HLCOM sessions successfully created for S-GW (part of SAEGW) during paging.	Increments when S-GW (part of SAEGW) creats HLCOM session during paging	Per SAEGW Service	Standard
saegw	sgw-pagingstat-actidleuetrans	INT32	Incremental	active	Total Active-Idle UE Transitions or S-GW (part of SAEGW)	Increments when UE changes state from Active to Idle	Per SAEGW Service	Standard
saegw	sgw-pagingstat-idleactuetrans	INT32	Incremental	active	Total Idle-Active UE Transitions or S-GW (part of SAEGW)	Increments when UE changes state from Idle to Active	Per SAEGW Service	Standard
saegw	sgw-pagingstat-highpriorityddn-initiated	INT32	Incremental	active	Total high priority DDNs initiated for an S-GW that is associated with an SAEGW service.	Increments when a UE sends a high priority DDN.	Per SAEGW Service	Standard
saegw	sgw-pagingstat-highpriorityddn-suppressed	INT32	Incremental	active	Total high priority DDNs suppressed for an S-GW that is associated with an SAEGW service.	Increments when UE cannot send a high priority DDN because it has already been sent.	Per SAEGW Service	Standard
saegw	sgw-pagingstat-ack-cause110-received	INT32	Incremental	active	The total number of DDN Ack messages received with cause code #110 (temp-ho-rejection) for a standalone S-GW.	Increments when a DDN Ack message with cause code #110 (temp-ho-rejection) is received.	At S-GW service level which is part of SAEGW service.	Standard
saegw	sgw-pagingstat-taurau-triggered-ddn	INT32	Incremental	active	The total number of DDNs triggered due to TAU/RAU requests resulting in a peer node change for a standalone S-GW.	Increments when a DDN is triggered towards the new peer node established due to a TAU/RAU request.	At S-GW service level which is part of SAEGW service.	Standard
saegw	sgw-pagingreldatastat-totbytebuff	INT32	Incremental	active	Total Bytes Buffered by S-GW (part of SAEGW) during Paging	Increments when S-GW (part of SAEGW) buffers data for UE during Paging	Per SAEGW Service	Standard
saegw	sgw-pagingreldatastat-disc	INT32	Incremental	active	Total Bytes Discarded by S-GW (part of SAEGW) during Paging	Increments when S-GW (part of SAEGW) discards data for UE during Paging	Per SAEGW Service	Standard
saegw	sgw-misc-uldatabeformbreq	INT32	Incremental	active	Number of uplink data bytes received before MBReq on SGW (part of SAEGW).	Increments when uplink data byte received before MBReq.	Per SAEGW Service	Standard
saegw	sgw-misc-cbreqrcvbeforcsrsp	INT32	Incremental	active	Number of CBReq received before CSRsp on SGW (part of SAEGW).	Increments when CBReq is received before CSRsp.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totcur-tunnels	INT32	Gauge	active	The total number of current Indirect forwarding tunnels on SGW (part of SAEGW).	Increments when indirect forwading tunnel is created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totcur-bearers	INT32	Gauge	active	The total number of current bearers in indirect forwarding tunnel on SGW (part of SAEGW).	Increments when indirect forwarding bearers are created and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totsetup-tunnels	INT32	Incremental	active	The total number of Indirect forwarding tunnels set up on SGW (part of SAEGW).	Increments when indirect forwading tunnel is created.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totsetup-bearers	INT32	Incremental	active	The total number of bearers setup in indirect forwarding tunnel on SGW (part of SAEGW).	Increments when indirect forwarding bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totrel-tunnels	INT32	Incremental	active	The total number of Indirect forwarding tunnels released on SGW (part of SAEGW).	Increments when indirect forwading tunnel is released	Per SAEGW Service	Standard
saegw	sgw-indftstat-totrel-bearers	INT32	Incremental	active	The total number of Indirect forwarding bearers released on SGW (part of SAEGW).	Increments when indirect forwarding bearer is released.	Per SAEGW Service	Standard
saegw	sgw-indftstat-totfail-tunnels	INT32	Incremental	active	The total number of Indirect forwarding tunnels failed on SGW (part of SAEGW).	Increments when indirect forwarding tunnel creation fails.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-indftstat-data-fwd-pkts	INT32	Incremental	active	The total number of packets forwarded in Indirect forwarding tunnel on SGW (part of SAEGW).	Increments when packet is sent in indirect forwarding tunnel.	Per SAEGW Service	Standard
saegw	sgw-indftstat-data-fwd-bytes	INT32	Incremental	active	The total number of bytes forwarded in Indirect forwarding tunnel on SGW (part of SAEGW).	Increments when bytes are sent in indirect forwarding tunnel.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-home-pdn-active	INT32	Gauge	active	Total Home PDNs active on SGW (part of SAEGW).	Increments when new home PDN is setup and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-home-pdn-setup	INT32	Incremental	active	Total Home PDNs setup on SGW (part of SAEGW).	Increments when new home PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-home-pdn-released	INT32	Incremental	active	Total Home PDNs released on SGW (part of SAEGW).	Increments when home PDN is released.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-roam-pdn-active	INT32	Gauge	active	Total Roaming PDNs active on SGW (part of SAEGW).	Increments when new roaming PDN is setup and decrements when its released.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-roam-pdn-setup	INT32	Incremental	active	Total Roaming PDNs setup on SGW (part of SAEGW).	Increments when new roaming PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-roam-pdn-released	INT32	Incremental	active	Total Roaming PDNs released on SGW (part of SAEGW).	Increments when roaming PDN is released.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-vist-pdn-active	INT32	Gauge	active	Total Visiting PDNs active on SGW (part of SAEGW).	Increments when new visiting PDN is setup and decrements when its released..	Per SAEGW Service	Standard
saegw	sgw-plmnstat-vist-pdn-setup	INT32	Incremental	active	Total Visiting PDNs setup on SGW (part of SAEGW).	Increments when new visiting PDN is setup.	Per SAEGW Service	Standard
saegw	sgw-plmnstat-vist-pdn-released	INT32	Incremental	active	Total Visiting PDNs released on SGW (part of SAEGW).	Increments when visiting PDN is released.	Per SAEGW Service	Standard
saegw	sgw-ipv4-pdn-to-user-pkt	INT64	Incremental	active	Total number of downlink packets with IPv4 PDN	Increments when downlink data packet is sent with IPv4 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4-pdn-to-user-byte	INT64	Incremental	active	Total number of downlink bytes with IPv4 PDN	Increments when downlink data byte is sent with IPv4 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4-pdn-from-user-pkt	INT64	Incremental	active	Total number of uplink packets with IPv4 PDN	Increments when uplink data packet is received with IPv4 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4-pdn-from-user-byte	INT64	Incremental	active	Total number of uplink bytes with IPv4 PDN	Increments when uplink data byte is received with IPv4 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv6-pdn-to-user-pkt	INT64	Incremental	active	Total number of downlink packets with IPv6 PDN	Increments when downlink data packet is sent with IPv6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv6-pdn-to-user-byte	INT64	Incremental	active	Total number of downlink bytes with IPv6 PDN	Increments when downlink data byte is sent with IPv6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv6-pdn-from-user-pkt	INT64	Incremental	active	Total number of uplink packets with IPv6 PDN	Increments when uplink data packet is received with IPv6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv6-pdn-from-user-byte	INT64	Incremental	active	Total number of uplink bytes with IPv6 PDN	Increments when uplink data byte is received with IPv6 PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-ipv4v6-pdn-ipv4-to-user-pkt	INT64	Incremental	active	Total number of IPv4 downlink packets with IPv4v6 PDN	Increments when IPv4 downlink data packet is sent with IPv4v6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4v6-pdn-ipv4-to-user-byte	INT64	Incremental	active	Total number of IPv4 downlink bytes with IPv4v6 PDN	Increments when IPv4 downlink data byte is sent with IPv4v6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4v6-pdn-ipv4-from-user-pkt	INT64	Incremental	active	Total number of IPv4 uplink packets with IPv4v6 PDN	Increments when IPv4 uplink data packet is received with IPv4v6 PDN.	Per SAEGW Service	Standard
saegw	sgw-ipv4v6-pdn-ipv4-from-user-byte	INT64	Incremental	active	Total number of IPv4 uplink bytes with IPv4v6 PDN	Increments when IPv4 uplink data byte is received with IPv4v6 PDN.	Per SAEGW Service	Standard

Increments when the S-GW (as part of the SAEGW) drops a downlink data packet for a bearer with a QCI of 65 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 66 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data byte for a bearer with a QCI of 66 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 66 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data packet for a bearer with a QCI of 66 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 69 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data byte for a bearer with a QCI of 69 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 69 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data packet for a bearer with a QCI of 69 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data byte for a bearer with a QCI of 70 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S1u interface.	Increments when the S-GW (as part of the SAEGW) drops a downlink data packet for a bearer with a QCI of 70 on the S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-othertotbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S1u interface.	Increments when S-GW (part of SAEGW) drops downlink data byte for bearer with non-standard QCI on S1u interface	Per SAEGW Service	Standard
saegw	sgw-s1u-dl-drop-othertotpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S1u interface.	Increments when S-GW (part of SAEGW) drops downlink data packet for bearer with non-standard QCI on S1u interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s11u-ul-packets	INT64	Incremental	active	Total uplink packets received on S11U interface on SGW (part of SAEGW).	Increments when uplink packet is received on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-bytes	INT64	Incremental	active	Total uplink bytes received on S11U interface on SGW (part of SAEGW).	Increments when uplink byte is received on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-dl-packets	INT64	Incremental	active	Total downlink packets sent on S11U interface on SGW (part of SAEGW).	Increments when downlink packet is sent on S11U interface	Per SAEGW Service	Standard
saegw	sgw-s11u-dl-bytes	INT64	Incremental	active	Total downlink bytes sent on S11U interface on SGW (part of SAEGW).	Increments when downlink byte is sent on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-dropped-packets	INT64	Incremental	active	Total uplink packets dropped on S11U interface on SGW (part of SAEGW).	Increments when uplink packet is dropped on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-dropped-bytes	INT64	Incremental	active	Total uplink bytes dropped on S11U interface on SGW (part of SAEGW).	Increments when uplink byte is dropped on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-dl-dropped-packets	INT64	Incremental	active	Total downlink packets dropped on S11U interface on SGW (part of SAEGW).	Increments when downlink packet is dropped on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-dl-dropped-bytes	INT64	Incremental	active	Total downlink bytes dropped on S11U interface on SGW (part of SAEGW).	Increments when downlink byte is dropped on S11U interface.	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci1totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI1 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI1 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci1totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI1 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI1 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci2totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI2 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI2 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci2totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI2 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI2 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci3totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI3 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI3 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci3totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI3 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI3 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci4totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI4 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI4 on S11u interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s11u-ul-qci4totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI4 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI4 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci5totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI5 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI5 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci5totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI5 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI5 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci6totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI6 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI6 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci6totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI6 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI6 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci7totbyte	INT64	Incremental	active	Total uplink data bytes received by S-GW for bearer with QCI7 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data byte for bearer with QCI7 on S11u interface	Per SAEGW Service	Standard
saegw	sgw-s11u-ul-qci7totpkt	INT64	Incremental	active	Total uplink data packets received by S-GW for bearer with QCI7 on S11u interface on SGW (part of SAEGW).	Increments when S-GW receives uplink data packet for bearer with QCI7 on S11u interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s12-ul-drop-qci70totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data packet for a bearer with a QCI of 70 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-ul-drop-othertotbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S12 interface.	Increments when S-GW (part of SAEGW) drops uplink data byte for bearer with non-standard QCI on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-ul-drop-otherpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S12 interface.	Increments when S-GW (part of SAEGW) drops uplink data packet for bearer with non-standard QCI on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci1totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 1 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 1 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci1totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 1 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 1 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci2totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 2 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 2 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci2totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 2 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 2 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci3totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 3 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 3 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci3totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 3 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 3 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci4totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 4 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 4 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci4totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 4 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 4 on S12 interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s12-dl-qci5totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 5 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 5 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci5totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 5 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 5 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci6totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 6 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 6 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci6totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 6 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 6 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci7totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 7 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 7 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci7totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 7 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 7 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci8totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 8 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 8 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci8totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 8 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 8 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci9totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 9 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with QCI 9 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci9totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 9 on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with QCI 9 on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci65totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 65 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data byte for a bearer with a QCI of 65 on the S12 interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s12-dl-qci65totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 65 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data packet for a bearer with a QCI of 65 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 66 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data byte for a bearer with a QCI of 66 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 66 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data packet for a bearer with a QCI of 66 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 69 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data byte for a bearer with a QCI of 69 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 69 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data packet for a bearer with a QCI of 69 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data byte for a bearer with a QCI of 70 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S12 interface.	Increments when the S-GW (as part of the SAEGW) accepts a downlink data packet for a bearer with a QCI of 70 on the S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-othertotbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with non-standard QCI on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data byte for bearer with non-standard QCI on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-othertotpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with non-standard QCI on S12 interface.	Increments when S-GW (part of SAEGW) accepts downlink data packet for bearer with non-standard QCI on S12 interface	Per SAEGW Service	Standard
saegw	sgw-s12-dl-drop-qci1totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW (part of SAEGW) for bearer with QCI 1 on S12 interface.	Increments when S-GW (part of SAEGW) drops downlink data byte for bearer with QCI 1 on S12 interface	Per SAEGW Service	Standard

Increments when the S-GW (as part of the SAEGW) drops an uplink data byte for a bearer with a QCI of 69 on the S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-ul-drop-qci69totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 69 on the S8 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data packet for a bearer with a QCI of 69 on the S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-ul-drop-qci70totbyte	INT64	Incremental	active	The total number of uplink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S8 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data byte for a bearer with a QCI of 70 on the S8 interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s8-ul-drop-qci70totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 70 on the S8 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data packet for a bearer with a QCI of 70 on the S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-ul-drop-othertotbyte	INT64	Incremental	active	Total uplink data bytes dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S8 interface.	Increments when S-GW (part of SAEGW) drops uplink data byte for bearer with non-standard QCI on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-ul-drop-otherpkt	INT64	Incremental	active	Total uplink data packets dropped by S-GW (part of SAEGW) for bearer with non-standard QCI on S8 interface.	Increments when S-GW (part of SAEGW) drops uplink data packet for bearer with non-standard QCI on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci1totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 1 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 1 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci1totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 1 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 1 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci2totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 2 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 2 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci2totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 2 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 2 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci3totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 3 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 3 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci3totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 3 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 3 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci4totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 4 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 4 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci4totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 4 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 4 on S8 interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s8-dl-qci5totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 5 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 5 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci5totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 5 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 5 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci6totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 6 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 6 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci6totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 6 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 6 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci7totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 7 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 7 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci7totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 7 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 7 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci8totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW (part of SAEGW) for bearer with QCI 8 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data byte for bearer with QCI 8 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci8totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW (part of SAEGW) for bearer with QCI 8 on S8 interface.	Increments when S-GW (part of SAEGW) accpets downlink data packet for bearer with QCI 8 on S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci9totbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI9 on S8 interface on SGW (part of SAEGW).	Increments when S-GW accepts downlink data byte for bearer with QCI9 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci9totpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI9 on S8 interface on SGW (part of SAEGW).	Increments when S-GW accepts downlink data packet for bearer with QCI9 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci65totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 65 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 65 on the S8 interface.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s8-dl-qci65totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 65 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 65 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 66 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 66 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 66 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 66 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 69 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 69 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 69 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 69 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 70 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 70 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 70 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 70 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-othertotbyte	INT64	Incremental	active	Total downlink data bytes accepted by S-GW for bearer with QCI other than 1 to 9 on S8 interface on SGW (part of SAEGW).	Increments when S-GW accepts downlink data byte for bearer with QCI other than 1 to 9 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-othertotpkt	INT64	Incremental	active	Total downlink data packets accepted by S-GW for bearer with QCI other than 1 to 9 on S8 interface on SGW (part of SAEGW).	Increments when S-GW accepts downlink data packet for bearer with QCI other than 1 to 9 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci1totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI1 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI1 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci1totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI1 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI1 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci2totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI2 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI2 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci2totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI2 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI2 on S8 interface.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s8-dl-drop-qci3totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI3 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI3 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci3totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI3 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI3 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci4totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI4 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI4 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci4totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI4 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI4 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci5totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI5 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI5 on S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci5totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI5 on S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI5 on S8 interface.	Per SAEGW Service	Standard

saegw	sgw-s5s8-dl-drop-qci2totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI2 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI2 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci3totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI3 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI3 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci3totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI3 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI3 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci4totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI4 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI4 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci4totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI4 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI4 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci5totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI5 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI5 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci5totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI5 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI5 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci6totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI6 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI6 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci6totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI6 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI6 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci7totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI7 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI7 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci7totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI7 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI7 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci8totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI8 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI8 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci8totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI8 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI8 on S5/S8 interface.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-s5s8-dl-drop-qci9totbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI9 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI9 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci9totpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI9 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI9 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci65totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 65 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 65 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci65totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 65 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 65 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci66totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 66 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 66 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci66totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 66 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 66 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci69totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 69 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 69 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci69totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 69 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 69 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci70totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 70 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 70 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-qci70totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 70 on the S5/S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 70 on the S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-othertotbyte	INT64	Incremental	active	Total downlink data bytes dropped by S-GW for bearer with QCI other than 1 to 9 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data byte for bearer with QCI other than 1 to 9 on S5/S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s5s8-dl-drop-othertotpkt	INT64	Incremental	active	Total downlink data packets dropped by S-GW for bearer with QCI other than 1 to 9 on S5/S8 interface on SGW (part of SAEGW).	Increments when S-GW drops downlink data packet for bearer with QCI other than 1 to 9 on S5/S8 interface.	Per SAEGW Service	Standard

Decrements when bearer with QCI 4 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subqosstat-bearact-qci5	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - QCI 5	Increments when bearer with QCI 5 become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when bearer with QCI 5 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci6	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - QCI 6	Increments when bearer with QCI 6 become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when bearer with QCI 6 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci7	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - QCI 7	Increments when bearer with QCI 7 become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when bearer with QCI 7 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci8	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - QCI 8	Increments when bearer with QCI 8 become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when bearer with QCI 8 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci9	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - QCI 9	Increments when bearer with QCI 9 become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when bearer with QCI 9 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci65	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 65 become active for a P-GW PDN. Decrements when a bearer with QCI 65 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci66	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 66 become active for a P-GW PDN. Decrements when a bearer with QCI 66 is released for a P-GW PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subqosstat-bearact-qci69	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 69 become active for a P-GW PDN. Decrements when a bearer with QCI 69 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qci70	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 70 become active for a P-GW PDN. Decrements when a bearer with QCI 70 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qcinongbr	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - Non-Standard QCI (Non-GBR)	Increments when Non-GBR bearer with Non-Standard QCI become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when Non-GBR bearer with Non-Standard QCI is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearact-qcigbr	INT32	Gauge	active	P-GW Subscriber QoS Statistics: Total bearers active - Non-Standard QCI (GBR)	Increments when GBR bearer with Non-Standard QCI become active for PGW anchored/GGSN anchored/Collapsed PDN. Decrements when GBR bearer with Non-Standard QCI is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci1	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 1	Increments when bearer with QCI 1 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci2	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 2	Increments when bearer with QCI 2 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci3	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 3	Increments when bearer with QCI 3 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci4	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 4	Increments when bearer with QCI 4 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci5	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 5	Increments when bearer with QCI 5 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subqosstat-bearset-qci6	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 6	Increments when bearer with QCI 6 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci7	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 7	Increments when bearer with QCI 7 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci8	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 8	Increments when bearer with QCI 8 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci9	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - QCI 9	Increments when bearer with QCI 9 is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci65	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 65 is setup for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci66	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 66 is setup for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci69	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 69 is setup for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qci70	INT32	Incremental	active	The total number of subscriber bearers setup with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 70 is setup for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qcinongbr	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - Non-Standard QCI (Non-GBR)	Increments when Non-GBR bearer with Non-Standard QCI is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearset-qcigbr	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers setup - Non-Standard QCI (GBR)	Increments when GBR bearer with Non-Standard QCI is setup for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci1	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 1	Increments when bearer with QCI 1 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci2	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 2	Increments when bearer with QCI 2 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci3	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 3	Increments when bearer with QCI 3 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci4	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 4	Increments when bearer with QCI 4 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subqosstat-bearrel-qci5	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 5	Increments when bearer with QCI 5 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci6	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 6	Increments when bearer with QCI 6 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci7	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 7	Increments when bearer with QCI 7 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci8	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 8	Increments when bearer with QCI 8 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci9	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - QCI 9	Increments when bearer with QCI 9 is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci65	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 65 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci66	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 66 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci69	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 69 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qci70	INT32	Incremental	active	The total number of subscriber bearers released with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments when a bearer with QCI 70 is released for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qcinongbr	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - Non-Standard QCI (Non-GBR)	Increments when Non-GBR bearer with Non-Standard QCI is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subqosstat-bearrel-qcigbr	INT32	Incremental	active	P-GW Subscriber QoS Statistics: Total bearers released - Non-Standard QCI (GBR)	Increments when GBR bearer with Non-Standard QCI is released for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-totulpktfwd	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded	Increments when uplink data packet is forwarded for any PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci1	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - QCI 1	Increments when uplink data packet of bearer with QCI 1 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-ulpktfwd-qci2	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - QCI 2	Increments when uplink data packet of bearer with QCI 2 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci3	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 3	Increments when uplink data packet of bearer with QCI 3 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci4	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 4	Increments when uplink data packet of bearer with QCI 4 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci5	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 5	Increments when uplink data packet of bearer with QCI 5 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci6	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 6	Increments when uplink data packet of bearer with QCI 6 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci7	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 7	Increments when uplink data packet of bearer with QCI 7 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci8	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 8	Increments when uplink data packet of bearer with QCI 8 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci9	INT32	Incremental	active	P-GW Subscriber Data Statistics:Total Uplink packets forwarded - QCI 9	Increments when uplink data packet of bearer with QCI 9 is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci65	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments when an uplink data packet of bearer with QCI 65 is forwarded for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci66	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments when an uplink data packet of bearer with QCI 66 is forwarded for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qci69	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments when an uplink data packet of bearer with QCI 69 is forwarded for a P-GW PDN	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-ulpktfwd-qci70	INT32	Incremental	active	The total number of subscriber uplink data packets forwarded on a bearer with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments when an uplink data packet of bearer with QCI 70 is forwarded for a P-GW PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-stdqcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Standard QCI (Non-GBR)	Increments when uplink data packet of Non-GBR bearer with Standard QCI is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-stdqcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Standard QCI (GBR)	Increments when uplink data packet of GBR bearer with Standard QCI is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Non-Standard QCI (Non-GBR)	Increments when uplink data packet of Non-GBR bearer with Non-Standard QCI is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-qcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Non-Standard QCI (GBR)	Increments when uplink data packet of GBR bearer with Non-Standard QCI is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-totgbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Total GBR	Increments when uplink data packet of GBR bearer is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulpktfwd-totnongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink packets forwarded - Total Non-GBR	Increments when uplink data packet of Non-GBR bearer is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-totulbytefwd	INT64	Incremental	active	P-GW Subscriber Data Statistics: Total Uplink bytes forwarded	Increments by number of byte when uplink data packet is forwarded for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci1	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 1	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 1 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-ulbytefwd-qci2	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 2	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 2 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci3	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 3	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 3 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci4	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 4	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 4 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci5	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 5	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 5 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci6	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 6	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 6 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci7	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 7	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 7 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci8	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 8	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 8 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-ulbytefwd-qci9	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - QCI 9	Increments by the number of bytes in packet when the uplink data packet is forwarded for a QCI 9 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci65	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when the an uplink data packet is forwarded for a QCI 65 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci66	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when the an uplink data packet is forwarded for a QCI 66 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci69	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when the an uplink data packet is forwarded for a QCI 69 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qci70	INT64	Incremental	active	The total number of subscriber uplink data bytes forwarded on a bearer with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when the an uplink data packet is forwarded for a QCI 70 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-stdqcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - Standard QCI (Non-GBR)	Increments by bytes in packet when uplink data packet is forwarded for standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-stdqcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - Standard QCI (GBR)	Increments by bytes in packet when uplink data packet is forwarded for standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service.	Standard
saegw	pgw-subdatastat-ulbytefwd-qcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - Non-Standard QCI (Non-GBR)	Increments by bytes in packet when uplink data packet is forwarded for Non-standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-ulbytefwd-qcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - Non-Standard QCI (GBR)	Increments by bytes in packet when uplink data packet is forwarded for Non-standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-ulbytefwd-totgbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Uplink bytes forwarded - Total GBR	Increments by bytes in packet when uplink data packet is forwarded for GBR bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlpktfwd-qci8	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - QCI 8	Increments when downlink data packet is forwarded for a QCI 8 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qci9	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - QCI 9	Increments when downlink data packet is forwarded for a QCI 9 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qci65	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is forwarded for a QCI 65 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qci66	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is forwarded for a QCI 66 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qci69	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is forwarded for a QCI 69 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qci70	INT32	Incremental	active	The total number of subscriber downlink data packets forwarded on a bearer with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is forwarded for a QCI 70 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-stdqcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Standard QCI (Non-GBR)	Increments when downlink data packet is forwarded for standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-stdqcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Standard QCI (GBR)	Increments when downlink data packet is forwarded for standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Non-Standard QCI (Non-GBR)	Increments when downlink data packet is forwarded for Non-standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-qcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Non-Standard QCI (GBR)	Increments when downlink data packet is forwarded for Non-standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktfwd-totgbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Total GBR	Increments when downlink data packet is forwarded for GBR bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlpktfwd-totnongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets forwarded - Total Non-GBR	Increments when downlink data packet is forwarded for Non-GBR bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-totdlbytefwd	INT64	Incremental	active	P-GW Subscriber Data Statistics: Total Downlink bytes forwarded	Increments by bytes in packet when downlink data packet is forwarded for a PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci1	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 1	Increments by bytes in packet when downlink data packet is forwarded for QCI-1 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci2	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 2	Increments by bytes in packet when downlink data packet is forwarded for QCI-2 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci3	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 3	Increments by bytes in packet when downlink data packet is forwarded for QCI-3 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci4	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 4	Increments by bytes in packet when downlink data packet is forwarded for QCI-4 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci5	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 5	Increments by bytes in packet when downlink data packet is forwarded for QCI-5 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci6	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 6	Increments by bytes in packet when downlink data packet is forwarded for QCI-6 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci7	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 7	Increments by bytes in packet when downlink data packet is forwarded for QCI-7 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlbytefwd-qci8	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 8	Increments by bytes in packet when downlink data packet is forwarded for QCI-8 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci9	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - QCI 9	Increments by bytes in packet when downlink data packet is forwarded for QCI-9 bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci65	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 65 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is forwarded for QCI-65 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci66	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 66 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is forwarded for QCI-66 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci69	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 69 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is forwarded for QCI-69 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qci70	INT64	Incremental	active	The total number of subscriber downlink data bytes forwarded on a bearer with a QCI of 70 on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is forwarded for QCI-70 bearer of P-GW PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-stdqcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - Standard QCI (Non-GBR)	Increments by bytes in packet when downlink data packet is forwarded for standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-stdqcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - Standard QCI (GBR)	Increments by bytes in packet when downlink data packet is forwarded for standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-qcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - Non-Standard QCI (Non-GBR)	Increments by bytes in packet when downlink data packet is forwarded for Non-standard QCI (Non-GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlbytefwd-qcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - Non-Standard QCI (GBR)	Increments by bytes in packet when downlink data packet is forwarded for Non-standard QCI (GBR) bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytefwd-totgbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes forwarded - Total GBR	Increments by bytes in packet when downlink data packet is forwarded for GBR bearer of PGW anchored/GGSN anchored/Collapsed PDN.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlpktdropmbrexc-qci65	INT32	Incremental	active	The total number of subscriber downlink data packets dropped on a bearer with a QCI of 65 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 65	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-qci66	INT32	Incremental	active	The total number of subscriber downlink data packets dropped on a bearer with a QCI of 66 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 66	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-qci69	INT32	Incremental	active	The total number of subscriber downlink data packets dropped on a bearer with a QCI of 69 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 69	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-qci70	INT32	Incremental	active	The total number of subscriber downlink data packets dropped on a bearer with a QCI of 70 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 70	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-stdqcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Standard QCI (Non-GBR	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Standard QCI Non-GBR bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-stdqcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Standard QCI (GBR)	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Standard QCI (GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-qcinongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Non-Standard QCI (Non-GBR)	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Non-Standard QCI (Non-GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-qcigbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Non-Standard QCI (GBR)	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Non-Standard QCI(GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlpktdropmbrexc-totgbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Total GBR	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN all GBR QCI's (Standard + Non-Standard) bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlpktdropmbrexc-totnongbr	INT32	Incremental	active	P-GW Subscriber Data Statistics: Downlink packets dropped due to MBR exceed - Total NON-GBR	Increments when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN all Non-GBR QCI's (Standard + Non-Standard) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-totdlbytedropmbrexc	INT64	Incremental	active	P-GW Subscriber Data Statistics: Total Downlink bytes dropped due to MBR exceed	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci1	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 1	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 1 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci2	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 2	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 2 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci3	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed- QCI 3	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 3 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci4	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 4	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 4 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci5	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed- QCI 5	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 5 bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlbytedropmbrexc-qci6	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 6	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 6 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci7	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 7	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 7 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci8	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 8	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 8 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci9	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - QCI 9	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN QCI 9 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci65	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 65 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 65 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci66	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 65 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 66 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qci69	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 65 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 69 bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlbytedropmbrexc-qci70	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 65 due to MBR exceeded on a P-GW (as part of the SAEGW)	Increments by the number of bytes in packet when a downlink data packet is dropped due to MBR exceed on a P-GW PDN having a bearer with QCI 70 bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-stdqcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Standard QCI (Non-GBR)	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Standard QCI (Non-GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-stdqcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Standard QCI (GBR)	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Standard QCI (GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qcinongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Non-Standard QCI (Non-GBR)	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Non-Standard QCI (Non-GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-qcigbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Non-Standard QCI (GBR)	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Non-Standard QCI (GBR) bearer	Per SAEGW Service	Standard
saegw	pgw-subdatastat-dlbytedropmbrexc-totgbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Total GBR	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN GBR bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-subdatastat-dlbytedropmbrexc-totnongbr	INT64	Incremental	active	P-GW Subscriber Data Statistics: Downlink bytes dropped due to MBR exceed - Total NON-GBR	Increments by number of bytes in packet when a downlink data packet is dropped due to MBR exceed, for PGW anchored/GGSN anchored/Collapsed PDN Non-GBR bearer	Per SAEGW Service	Standard
saegw	pgw-apnambrratelimit-ulpktdrop	INT32	Incremental	active	APN AMBR Rate Limiting Statistics: Uplink packets dropped	Increments when uplink data packet is dropped due to APN AMBR Rate limiting, for PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-apnambrratelimit-dlpktdrop	INT32	Incremental	active	APN AMBR Rate Limiting Statistics: Downlink packets dropped	Increments when downlink data packet is dropped due to APN AMBR Rate limiting, for PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-apnambrratelimit-ulbytedrop	INT64	Incremental	active	APN AMBR Rate Limiting Statistics: Uplink bytes dropped	Increments by number of bytes when uplink data packet is dropped due to APN AMBR Rate limiting, for PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-apnambrratelimit-dlbytedrop	INT64	Incremental	active	APN AMBR Rate Limiting Statistics: Downlink bytes dropped	Increments by number of bytes when downlink data packet is dropped due to APN AMBR Rate limiting, for PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4-pdn-to-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink data packets sent on IPv4 PDN	Increments when downlink data packet is sent, for IPv4 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4-pdn-to-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink data bytes sent on IPv4 PDN	Increments by number of bytes when downlink data packet is sent, for IPv4 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4-pdn-from-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink data packets sent on IPv4 PDN	Increments when uplink data packet is sent, for IPv4 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-ipv4-pdn-from-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink data bytes sent on IPv4 PDN	Increments by number of bytes when uplink data packet is sent, for IPv4 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv6-pdn-to-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink data packets sent on IPv6 PDN	Increments when downlink data packet is sent, for IPv6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv6-pdn-to-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink data bytes sent on IPv6 PDN	Increments by number of bytes when downlink data packet is sent, for IPv6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv6-pdn-from-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink data packets sent on IPv6 PDN	Increments when uplink data packet is sent, for IPv6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv6-pdn-from-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink data bytes sent on IPv6 PDN	Increments by number of bytes when uplink data packet is sent, for IPv6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv4-to-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink IPv4 data packets sent on IPv4v6 PDN	Increments when IPv4 downlink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv4-to-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink IPv4 data bytes sent on IPv4v6 PDN	Increments by number of bytes when IPv4 downlink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv4-from-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink IPv4 data packets sent on IPv4v6 PDN	Increments when IPv4 uplink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv4-from-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink IPv4 data bytes sent on IPv4v6 PDN	Increments by number of bytes when IPv4 uplink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-ipv4v6-pdn-ipv6-to-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink IPv6 data packets sent on IPv4v6 PDN	Increments when IPv6 downlink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv6-to-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Downlink IPv6 data bytes sent on IPv4v6 PDN	Increments by number of bytes when IPv6 downlink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv6-from-user-pkt	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink IPv6 data packets sent on IPv4v6 PDN	Increments when IPv6 uplink data packet is sent, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-ipv4v6-pdn-ipv6-from-user-byte	INT64	Incremental	active	P-GW Subscriber Data Statistics: Number of Uplink IPv6 data bytes sent on IPv4v6 PDN	Increments by number of bytes when IPv6 uplink data byte is received, for IPv4v6 PGW anchored/GGSN anchored/Collapsed PDN bearer	Per SAEGW Service	Standard
saegw	pgw-sessstat-ovrchrgprtctn-pdns-ovrchrg-paused	INT32	Incremental	active	Total number of PDN's in Overcharge-Protection Paused state.	Incremented when PDN moved to Overcharging paused state	Per SAEGW Service	Standard
saegw	pgw-sessstat-ovrchrgprtctn-uplkpktdrop	INT32	Incremental	active	Total number of Uplink Packets dropped in Overcharge-Protection state	Increments when uplink packet is dropped, for PGW anchored/Collapsed PDN bearers in overcharging-protection state	Per SAEGW Service	Standard
saegw	pgw-sessstat-ovrchrgprtctn-uplkbytedrop	INT64	Incremental	active	Total number of Uplink bytes dropped in Overcharge-Protection state	Increments by number of bytes when uplink packet is dropped, for PGW anchored/Collapsed PDN bearer in overcharging-protection state	Per SAEGW Service	Standard
saegw	pgw-sessstat-ovrchrgprtctn-dnlkpktdrop	INT32	Incremental	active	Total number of Downlink Packets dropped in Overcharge-Protection state.	Increments when downlink packet is dropped for PGW anchored/Collapsed PDN bearer in overcharging-protection state	Per SAEGW Service	Standard
saegw	pgw-sessstat-ovrchrgprtctn-dnlkbytedrop	INT64	Incremental	active	Total number of Downlink bytes dropped in Overcharge-Protection state.	Increments by number of bytes when downlink packet is dropped for PGW anchored/Collapsed PDN bearer in overcharging-protection state	Per SAEGW Service	Standard
saegw	pgw-transrate-sessevt-cumlt	INT64	Incremental	active	Cumulative Session Events: Pegged on receiving new PDN session creation or deletion request	On receiving new PDN session creation or deletion request	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	pgw-transrate-succ-sessevt-cumlt	INT64	Incremental	active	Cumulative Successful Session Events: Pegged on sending successful new PDN session creation or deletion response	On sending successful PDN session creation or deletion respose	Per SAEGW Service	Standard
saegw	pgw-transrate-unsucc-sessevt-cumlt	INT64	Incremental	active	Cumulative Unsuccessful Session Events: Pegged on sending unsuccessful new PDN session creation or deletion response	On sending unsuccessful PDN session creation or deletion respose	Per SAEGW Service	Standard
saegw	pgw-transrate-nwinit-setupteardown-evt-cumlt	INT64	Incremental	active	Cumulative N/w Initiated Setup/Teardown Events: Pegged on sending bearer creation or deletion request	On sending bearer creation or deletion request	Per SAEGW Service	Standard
saegw	pgw-transrate-succ-nwinit-setupteardown-evt-cumlt	INT64	Incremental	active	Cumulative Successful N/w Initiated Setup/Teardown Events: Pegged on receiving successful bearer creation or deletion response	On receiving successful bearer creation or deletion response	Per SAEGW Service	Standard
saegw	pgw-transrate-unsucc-nwinit-setupteardown-evt-cumlt	INT64	Incremental	active	Cumulative Unsuccessful N/w Initiated Setup/Teardown Events: Pegged on receiving unsuccessful bearer creation or deletion response	On receiving unsuccessful bearer creation or deletion response	Per SAEGW Service	Standard
saegw	pgw-transrate-sessevt-bkt1	FLOAT	Gauge	active	Session Events Rate: Transaction Rate at which new PDN session creation or deletion request are received (In a given interval)	On receiving new PDN session creation or deletion request	Per SAEGW Service	Standard
saegw	pgw-transrate-sessevt-bkt2	FLOAT	Gauge	active	Session Events Rate: Transaction Rate at which new PDN session creation or deletion request are received (In a given interval)	On receiving new PDN session creation or deletion request	Per SAEGW Service	Standard
saegw	pgw-transrate-sessevt-bkt3	FLOAT	Gauge	active	Session Events Rate: Transaction Rate at which new PDN session creation or deletion request are received (In a given interval)	On receiving new PDN session creation or deletion request	Per SAEGW Service	Standard

saegw	collapsed-subdatastat-dlbytedrop-qci5	INT64	Incremental	active	The sum of pgw-subdatastat-dlbytedrop-qci5 and sgw-datastat-dl-dropstat-qci5totbyte in SAEGW schema for a collapsed call only.	Incremented for a collapsed call per QCI 5 when the DL data packet is dropped by P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci6	INT64	Incremental	active	The sum of pgw-subdatastat-dlbytedrop-qci6 and sgw-datastat-dl-dropstat-qci6totbyte in SAEGW schema for a collapsed call only.	Incremented for a collapsed call per QCI 6 when the DL data packet is dropped by P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci7	INT64	Incremental	active	The sum of pgw-subdatastat-dlbytedrop-qci7 and sgw-datastat-dl-dropstat-qci7totbyte in SAEGW schema for a collapsed call only.	Incremented for a collapsed call per QCI 7 when the DL data packet is dropped by P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci8	INT64	Incremental	active	The sum of pgw-subdatastat-dlbytedrop-qci8 and sgw-datastat-dl-dropstat-qci8totbyte in SAEGW schema for a collapsed call only.	Incremented for a collapsed call per QCI 8 when the DL data packet is dropped by P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci9	INT64	Incremental	active	The sum of pgw-subdatastat-dlbytedrop-qci9 and sgw-datastat-dl-dropstat-qci9totbyte in SAEGW schema for a collapsed call only.	Incremented for a collapsed call per QCI 9 when the DL data packet is dropped by P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci65	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 65 on a SAEGW	Incremented for a collapsed call per QCI 65 when the DL data packet is dropped by the P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci66	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 66 on a SAEGW	Incremented for a collapsed call per QCI 66 when the DL data packet is dropped by the P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subdatastat-dlbytedrop-qci69	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 69 on a SAEGW	Incremented for a collapsed call per QCI 69 when the DL data packet is dropped by the P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	collapsed-subdatastat-dlbytedrop-qci70	INT64	Incremental	active	The total number of subscriber downlink data bytes dropped on a bearer with a QCI of 70 on a SAEGW	Incremented for a collapsed call per QCI 70 when the DL data packet is dropped by the P-GW or the DL data packet is dropped by the S-GW.	Per SAEGW Service	Standard
saegw	collapsed-subqosstat-bearact-qci1	INT32	Gauge	active	Collapsed Subscriber QoS Statistics: Total bearers active - QCI 1 .	Increments at sessmgr (P-GW) when the call is successfully setup at P-GW and becomes a collapsed call or when a Pure-P call becomes a collapsed call (S-GW relocation)Decrements when the collapsed call is released or when the collapsed call becomes a Pure-P call (S-GW relocation).	Per SAEGW Service	Standard
saegw	collapsed-subqosstat-bearact-qci2	INT32	Gauge	active	Collapsed Subscriber QoS Statistics: Total bearers active - QCI 2 .	Increments at sessmgr (P-GW) when the call is successfully setup at P-GW and becomes a collapsed call or when a Pure-P call becomes a collapsed call (S-GW relocation)Decrements when the collapsed call is released or when the collapsed call becomes a Pure-P call (S-GW relocation).	Per SAEGW Service	Standard
saegw	collapsed-subqosstat-bearact-qci3	INT32	Gauge	active	Collapsed Subscriber QoS Statistics: Total bearers active - QCI 3 .	Increments at sessmgr (P-GW) when the call is successfully setup at P-GW and becomes a collapsed call or when a Pure-P call becomes a collapsed call (S-GW relocation)Decrements when the collapsed call is released or when the collapsed call becomes a Pure-P call (S-GW relocation).	Per SAEGW Service	Standard
saegw	collapsed-subqosstat-bearact-qci4	INT32	Gauge	active	Collapsed Subscriber QoS Statistics: Total bearers active - QCI 4 .	Increments at sessmgr (P-GW) when the call is successfully setup at P-GW and becomes a collapsed call or when a Pure-P call becomes a collapsed call (S-GW relocation)Decrements when the collapsed call is released or when the collapsed call becomes a Pure-P call (S-GW relocation).	Per SAEGW Service	Standard

saegw	saegw-ggsn-sessstat-bearrel-nwdefsgw	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Default S-GW Path failure	Increments when a GGSN-anchored default bearer is deleted due to s-gw path failure	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-sessstat-bearrel-nwdefs4sgsn	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Default S4 SGSN Path failure	Increments when a GGSN-anchored default bearer is deleted due to s4 sgsn path failure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdefmme	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Default MME initiated release	Increments when a GGSN-anchored default bearer is deleted due to mme initiated release	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdedadmin	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated Admin disconnect	Increments when a GGSN-anchored dedicated bearer is deleted due to admin disconnect	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdedgtp	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated GTP-U error ind	Increments when a GGSN-anchored dedicated bearer is deleted due to gtp-u error ind	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdedmme	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated MME initiated release	Increments when a GGSN-anchored dedicated bearer is deleted due to mme initiated release	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdeddefbear	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated Default bearer release	Increments when a GGSN-anchored dedicated bearer is deleted due to default bearer release	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdedgxdisc	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated GX Disconnect	Increments when a GGSN-anchored dedicated bearer is deleted due to gx disconnect	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrel-nwdeds4sgsn	INT32	Incremental	active	GGSN-anchored session stats - Total bearers released - Network Dedicated S4 SGSN Path failure	Increments when a GGSN-anchored dedicated bearer is deleted due to s4 sgsn path failure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrelfail-def	INT32	Incremental	active	GGSN-anchored session stats - Total bearers release failure - Default bearers	Increments when a GGSN-anchored default bearer release fail	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrelfail-ded	INT32	Incremental	active	GGSN-anchored session stats - Total bearers release failure - Dedicated bearers	Increments when a GGSN-anchored dedicated bearer release fail	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-def	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Default bearers	Increments when a GGSN-anchored default bearer rejected	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-ded	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Dedicated bearers	Increments when a GGSN-anchored dedicated bearer rejected	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-emergency-def	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Default bearers - Emergency	Increments when a GGSN-anchored emergency default bearer rejected	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-emergency-ded	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Dedicated bearers - Emergency	Increments when a GGSN-anchored emergency dedicated bearer rejected	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-nores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - No Resource	Increments when a GGSN-anchored default bearer rejected reason No Resource	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-sessstat-bearrej-uereq	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - UE-req reject	Increments when a GGSN-anchored default bearer rejected reason UE-req reject	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-uereq-nores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - UE-req reject - No Resource	Increments when a GGSN-anchored default bearer rejected reason UE-req reject - No Resource	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-misapn	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Missing or unknown APN	Increments when a GGSN-anchored default bearer rejected reason Missing or unknown APN	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-nwreq	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Network-req reject	Increments when a GGSN-anchored default bearer rejected reason Network-req reject	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-nwreq-nores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Network-req reject - No Resource	Increments when a GGSN-anchored default bearer rejected reason Network-req reject - No Resource	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-nwreq-nomem	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Network-req reject - No memory available	Increments when a GGSN-anchored default bearer rejected reason Network-req reject - No memory available	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-nwreq-sysfail	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Network-req reject - System failure	Increments when a GGSN-anchored default bearer rejected reason Network-req reject - System failure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-apnmode	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - APN selection - Mode mismatch	Increments when a GGSN-anchored default bearer rejected reason APN selection - Mode mismatch	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-pdn	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Pref PDN-Type not supported	Increments when a GGSN-anchored default bearer rejected reason Pref PDN-Type not supported	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-apnrestr	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - APN restr violation	Increments when a GGSN-anchored default bearer rejected reason APN restr violation	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-subsauth	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Subs auth failed	Increments when a GGSN-anchored default bearer rejected reason Subs auth failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-subsaddrnotallow	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Subs static address not allowed	Increments when a GGSN-anchored default bearer rejected reason Subs static address not allowed	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-subsaddrnotalloc	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Subs static address not allocated	Increments when a GGSN-anchored default bearer rejected reason Subs static address not allocated	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-sessstat-bearrej-dynaddrnotalloc	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Dynamic address not allocated	Increments when a GGSN-anchored default bearer rejected reason Dynamic address not allocated	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearrej-subsaddrnotpres	INT32	Incremental	active	GGSN-anchored session stats - Total bearers rejected - Subs static address not present	Increments when a GGSN-anchored default bearer rejected reason Subs static address not present	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-ueinit	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - UE-initiated modification	Increments when a GGSN-anchored bearer updated due to ue initiated procedure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-nwinit	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated modification	Increments when a GGSN-anchored bearer updated due to network initiated procedure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-ueqos	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - UE-initiated QOS modification	Increments when a GGSN-anchored bearer updated due to UE-initiated QOS modification	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-uetft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - UE-initiated TFT modification	Increments when a GGSN-anchored bearer updated due to UE-initiated TFT modification	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-nwqos	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated QOS modification	Increments when a GGSN-anchored bearer updated due to Network-initiated QOS modification	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmod-nwtft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated TFT modification	Increments when a GGSN-anchored bearer updated due to Network-initiated TFT modification	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-ueinit	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated modification failed	Increments when a GGSN-anchored bearer modification fail due to UE-initiated modification failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwinit	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated modification failed	Increments when a GGSN-anchored bearer modification fail due to Network-initiated modification failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-uenores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated No resources available	Increments when a GGSN-anchored bearer modification fail due to UE-initiated No resources available	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-uesemtft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated Semantic error in TFT operation	Increments when a GGSN-anchored bearer modification fail due to UE-initiated Semantic error in TFT operation	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-uesyntft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated Syntactic error in TFT operation	Increments when a GGSN-anchored bearer modification fail due to UE-initiated Syntactic error in TFT operation	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-sessstat-bearmodfail-uesempkt	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated Semantic error in packet filter	Increments when a GGSN-anchored bearer modification fail due to UE-initiated Semantic error in packet filter	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-uesynpkt	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - UE-initiated Syntactic error in packet filter	Increments when a GGSN-anchored bearer modification fail due to UE-initiated Syntactic error in packet filter	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwnores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated No resources available	Increments when a GGSN-anchored bearer modification fail due to Network-initiated No resources available	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwnomem	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated No memory available	Increments when a GGSN-anchored bearer modification fail due to Network-initiated No memory available	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwsysfail	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated System failure	Increments when a GGSN-anchored bearer modification fail due to Network-initiated System failure	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwsemtft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated Semantic error in TFT operation	Increments when a GGSN-anchored bearer modification fail due to Network-initiated Semantic error in TFT operation	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwsyntft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated Syntact error in TFT operation	Increments when a GGSN-anchored bearer modification fail due to Network-initiated Syntact error in TFT operation	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwsempkt	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated Semantic error in packet filter	Increments when a GGSN-anchored bearer modification fail due to Network-initiated Semantic error in packet filter	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-nwsynpkt	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modification failure - Network-initiated Syntactic error in packet filter	Increments when a GGSN-anchored bearer modification fail due to Network-initiated Syntactic error in packet filter	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-qos-uenores	INT32	Incremental	active	GGSN-anchored session stats - Total bearers QOS modification failure - UE-initiated No resource available	Increments when a GGSN-anchored bearer QOS modification fail due to UE-initiated No resource available	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-bearmodfail-qos-uesemtft	INT32	Incremental	active	GGSN-anchored session stats - Total bearers QOS modification failure - UE-initiated Semantic error in TFT operation	Increments when a GGSN-anchored bearer QOS modification fail due to UE-initiated Semantic error in TFT operation	Per SAEGW Service	Standard

saegw	saegw-ggsn-sessstat-beardel	INT32	Incremental	active	GGSN-anchored session stats - Total bearers deleted.	Increments when a GGSN-anchored bearer is deleted.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-sessstat-nw-init-qos-update-att	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated QOS modification Attempted	Increments when a GGSN-anchored bearer modified due to Network-initiated QOS modification Attempted	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-nw-init-no-qos-update-att	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated No QOS modification Attempted	Increments when a GGSN-anchored bearer modified due to Network-initiated No QOS modification Attempted	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-nw-init-bearer-fail-cause	INT32	Incremental	active	GGSN-anchored session stats - Total bearers modified - Network-initiated bearer failure cause	Increments when a GGSN-anchored bearer modification fail due to Network-initiated bearer failure cause	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipv4addaloc	INT32	Incremental	active	GGSN-anchored session stats - IPv4 address allocation stats	Increments when a GGSN-anchored IPv4 address allocation success	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipaddaloc-ipv4loacalpool	INT32	Incremental	active	GGSN-anchored session stats - IP address allocation stats - IPv4 Local pool address assign	Increments when a GGSN-anchored IPv4 address allocation success for IPv4 local pool address assign	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipaddaloc-ipv4staticaddr	INT32	Incremental	active	GGSN-anchored session stats - IP address allocation stats - - IPv4 Static address assign	Increments when a GGSN-anchored IPv4 address allocation success for IPv4 Static address assign	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipaddaloc-ipv4radaddr	INT32	Incremental	active	GGSN-anchored session stats - IP address allocation stats - IPv4 Radius provided address assign	Increments when a GGSN-anchored IPv4 address allocation success for IPv4 Radius provided address assign	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipv6addaloc	INT32	Incremental	active	GGSN-anchored session stats - IPv6 address allocation stats	Increments when a GGSN-anchored IPv6 address allocation success	Per SAEGW Service	Standard
saegw	saegw-ggsn-sessstat-ipaddaloc-ipv6auto	INT32	Incremental	active	GGSN-anchored session stats - IP address allocation stats - IPv6 Stateless auto configuration	Increments when a GGSN-anchored IPv6 address allocation success for IPv6 Stateless auto configuration	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-homesubact	INT32	Gauge	active	GGSN-anchored Subscriber PLMN Stats - Home subscribers sessions active	Increments when GGSN-anchored home subscribers session is created	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-homesubsetup	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Home subscribers sessions setup	Increments when established GGSN-anchored home subscribers session request is received	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-homesubrel	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Home subscribers sessions released	Increments when release GGSN-anchored home subscribers session request is received	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-roamsubact	INT32	Gauge	active	GGSN-anchored Subscriber PLMN Stats - Roaming subscribers sessions active	Increments when GGSN-anchored roaming subscribers session is created	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-roamsubsetup	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Roaming subscribers sessions setup	Increments when established GGSN-anchored roaming subscribers session request is received	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-subplmnstat-roamsubrel	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Roaming subscribers sessions released	Increments when release GGSN-anchored roaming subscribers session request is received	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-visitsubact	INT32	Gauge	active	GGSN-anchored Subscriber PLMN Stats - Visiting subscribers sessions active	Increments when GGSN-anchored visiting subscribers session is created	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-visitsubsetup	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Visiting subscribers sessions setup	Increments when established GGSN-anchored visiting subscribers session request is received	Per SAEGW Service	Standard
saegw	saegw-ggsn-subplmnstat-visitsubrel	INT32	Incremental	active	GGSN-anchored Subscriber PLMN Stats - Visiting subscribers sessions released	Increments when release GGSN-anchored visiting subscribers session request is received	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-intersgsnatt	INT32	Incremental	active	GGSN-anchored Handover stats - inter SGSN attempted	Increments when a GGSN-anchored inter SGSN handover attempted	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-intersgsnsucc	INT32	Incremental	active	GGSN-anchored Handover stats - inter SGSN succeeded	Increments when a GGSN-anchored inter SGSN handover succeeded	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-intersgsnfail	INT32	Incremental	active	GGSN-anchored Handover stats - inter SGSN failed	Increments when a GGSN-anchored inter SGSN handover failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-gngptolteatt	INT32	Incremental	active	GGSN-anchored Handover stats - GNGP to LTE attempted	Increments when a GGSN-anchored GNGP to LTE handover attempted	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-gngptoltesucc	INT32	Incremental	active	GGSN-anchored Handover stats - GNGP to LTE succeeded	Increments when a GGSN-anchored GNGP to LTE handover succeeded	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-gngptoltefail	INT32	Incremental	active	GGSN-anchored Handover stats - GNGP to LTE failed	Increments when a GGSN-anchored GNGP to LTE handover failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-ltetogngpatt	INT32	Incremental	active	GGSN-anchored Handover stats - LTE to GNGP attempted	Increments when a GGSN-anchored LTE to GNGP handover attempted	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-ltetogngpsucc	INT32	Incremental	active	GGSN-anchored Handover stats - LTE to GNGP succeeded	Increments when a GGSN-anchored LTE to GNGP handover succeeded	Per SAEGW Service	Standard
saegw	saegw-ggsn-handoverstat-ltetogngpfail	INT32	Incremental	active	GGSN-anchored Handover stats - LTE to GNGP failed	Increments when a GGSN-anchored LTE to GNGP handover failed	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci1	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 1	Increments/decrements respectively on creation/deletion of bearer for QCI-1	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci2	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 2	Increments/decrements respectively on creation/deletion of bearer for QCI-2	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci3	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 3	Increments/decrements respectively on creation/deletion of bearer for QCI-3	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-subqosstat-bearact-qci4	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 4	Increments/decrements respectively on creation/deletion of bearer for QCI-4	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci5	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 5	Increments/decrements respectively on creation/deletion of bearer for QCI-5	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci6	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 6	Increments/decrements respectively on creation/deletion of bearer for QCI-6	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci7	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 7	Increments/decrements respectively on creation/deletion of bearer for QCI-7	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci8	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 8	Increments/decrements respectively on creation/deletion of bearer for QCI-8	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci9	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - QCI 9	Increments/decrements respectively on creation/deletion of bearer for QCI-9	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci65	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 65 on a GGSN (as part of the SAEGW)	Increments when a bearer with QCI 65 become active for a GGSN. Decrements when a bearer with QCI 65 is released for a GGSN. (both as part of the SAEGW)	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci66	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 66 on a GGSN (as part of the SAEGW)	Increments when a bearer with QCI 66 become active for a GGSN. Decrements when a bearer with QCI 66 is released for a GGSN. (both as part of the SAEGW)	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci69	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 69 on a GGSN (as part of the SAEGW)	Increments when a bearer with QCI 69 become active for a GGSN. Decrements when a bearer with QCI 69 is released for a GGSN. (both as part of the SAEGW)	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qci70	INT32	Gauge	active	The total number of subscriber bearers active with a QCI of 70 on a GGSN (as part of the SAEGW)	Increments when a bearer with QCI 70 become active for a GGSN. Decrements when a bearer with QCI 70 is released for a GGSN. (both as part of the SAEGW)	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	saegw-ggsn-subqosstat-bearact-qcinongbr	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - Non-Std QCI (Non-GBR)	Increments/decrements respectively on creation/deletion of bearer for Non-Std QCI (Non-GBR)	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearact-qcigbr	INT32	Gauge	active	GGSN-anchored Subscriber QoS Stats - Total bearers active - Non-Std QCI (GBR)	Increments/decrements respectively on creation/deletion of bearer for Non-Std QCI (GBR)	Per SAEGW Service	Standard
saegw	saegw-ggsn-subqosstat-bearset-qci1	INT32	Incremental	active	GGSN-anchored Subscriber QoS Stats - Total bearers setup - QCI 1	Increments when a bearer is created for QCI-1	Per SAEGW Service	Standard

Increments when a P-CSCF Restoration extension is performed for a P-CSCF Restoration Indication RAR received from a PCRF, for PGW anchored/Collapsed PDNs.	Per SAEGW Service	Standard
saegw	ue-in-psm	INT32	Gauge	active	Number of UEs currently in eDRx mode	Increments when UE goes to eDRx mode and decrements when it moves out of eDRx	Per SAEGW Service	Standard
saegw	external-id-active-sessions	INT32	Gauge	active	Number of active sessions with external-id from s6b	Increments when an external-id is received from s6b and the session is successful.	Per SAEGW Service	Standard
saegw	external-id-total-sessions	INT64	Incremental	active	Number of total sessions with external-id from s6b	Increments when an external-id is received from s6b and the session is successful.	Per SAEGW Service	Standard
saegw	pgw-sessstat-rej-pdn-backofftimer	INT32	Incremental	active	Number of LAPI (Low Access Priority Indicator) PDN sessions that are rejected due to overload (e.g. M2M sessions).	Incremented when Create Session Request is received with Signal Priority IE or PDN is configured as LAPI (Low Access Priority Indicator) and system is in overload state and Backoff timer is configured for the APN(s).	Per SAEGW Service	Standard
saegw	pgw-handoverstat-ltetos2bgtpsucc-timerexpiry	INT32	Incremental	active	P-GW Handover Statistics - Number of LTE to GTP S2b successful handover on Timer Expiry	Increments when LTE to GTP S2b handover is succeeded upon Timer Expiry, for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	pgw-handoverstat-ltetos2bgtpsucc-uplnkdata	INT32	Incremental	active	P-GW Handover Statistics - Number of LTE to GTP S2b successful handover on Uplink Data on S2b tunnel	Increments when LTE to GTP S2b handover is succeeded upon Uplink Data on S2b tunnel, for PGW anchored/GGSN anchored/Collapsed PDN	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci80	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 80 on the S-GW (part of SAEGW).	Increments when a QCI 80 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci82	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 82 on the S-GW (part of SAEGW).	Increments when a QCI 82 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearact-qci83	INT32	Gauge	active	The total number of EPS Bearers Active with a QCI 83 on the S-GW (part of SAEGW).	Increments when a QCI 83 bearer is created and decrements when it is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci80	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 80 on the S-GW (part of SAEGW).	Increments when a QCI 80 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearset-qci82	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 82 on the S-GW (part of SAEGW).	Increments when a QCI 82 bearer is setup.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearset-qci83	INT32	Incremental	active	The total number of EPS Bearers Setup with a QCI 83 on the S-GW (part of SAEGW).	Increments when a QCI 83 bearer is setup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci80	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 80 on the S-GW (part of SAEGW).	Increments when a QCI 80 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci82	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 82 on the S-GW (part of SAEGW).	Increments when a QCI 82 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-qci83	INT32	Incremental	active	The total number of EPS Bearers Released with a QCI 83 on the S-GW (part of SAEGW).	Increments when a QCI 83 EPS bearer is released.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci80	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 80 on the S-GW (part of SAEGW).	Increments when a QCI 80 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci82	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 82 on the S-GW (part of SAEGW).	Increments when a QCI 82 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearmod-qci83	INT32	Incremental	active	The total number of EPS Bearers Modified with a QCI 83 on the S-GW (part of SAEGW).	Increments when a QCI 83 EPS bearer is modified.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci80	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 80 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI80 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci82	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 82 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI82 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pgw-qci83	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 83 released with the reason P-GW initiated on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI83 is released with the reason P-GW initiated.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s1err-qci80	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 80 released with the reason S1 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI80 is released with the reason S1 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s1err-qci82	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 82 released with the reason S1 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI82 is released with the reason S1 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s1err-qci83	INT32	Incremental	active	The total number of dedicated EPS Bearers of QCI 83 released with the reason S1 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI83 is released with the reason S1 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s5err-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI80 released with the reason S5 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI80 is released with the reason S5 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s5err-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI82 released with the reason S5 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI82 is released with the reason S5 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s5err-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI83 released with the reason S5 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI83 is released with the reason S5 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s4err-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI80 released with the reason S4 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI80 is released with the reason S4 error indication.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearrel-dedrsn-s4err-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI82 released with the reason S4 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI82 is released with the reason S4 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s4err-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI83 released with the reason S4 Error Indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI83 is released with the reason S4 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s12err-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI80 released with the reason S12 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI80 is released with the reason S12 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s12err-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI82 released with the reason S12 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI82 is released with the reason S12 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-s12err-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI83 released with the reason S12 error indication on the S-GW (as part of SAEGW).	Increments when dedicated EPS bearer of QCI83 is released with the reason S12 error indication.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-local-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 80 released with local reason on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 80 is released with local reason.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-local-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 82 released with local reason on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 82 is released with local reason.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-local-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 83 released with local reason on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 83 is released with local reason.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pdn-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 80 released due to PDN cleanup on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 80 is released due to PDN cleanup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pdn-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 82 released due to PDN cleanup on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 82 is released due to PDN cleanup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pdn-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 83 released due to PDN cleanup on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 83 is released due to PDN cleanup.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s1-u-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 80 released with the reason S1-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 80 is released with the reason S1-U path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s1-u-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 82 released with the reason S1-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 82 is released with the reason S1-U path failure.	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearrel-dedrsn-pathfail-s1-u-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 83 released with the reason S1-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 83 is released with the reason S1-U path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-u-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 80 released with the reason S5-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 80 is released with the reason S5-U path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-u-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 82 released with the reason S5-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 82 is released with the reason S5-U path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-u-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 83 released with the reason S5-U path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 83 is released with the reason S5-U path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-qci80	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 80 released with the reason S5 path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 80 is released with the reason S5 path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-qci82	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 82 released with the reason S5 path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 82 is released with the reason S5 path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s5-qci83	INT32	Incremental	active	The total number of dedicated EPS bearers of QCI 83 released with the reason S5 path failure on the S-GW (as part of SAEGW).	Increments when a dedicated EPS bearer of QCI 83 is released with the reason S5 path failure.	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s11-qci80	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 80 released due to Path Failure on the S11 interface.	Increments when a dedicated bearer with QCI 80 is released due to a Path failure on the S11 interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s11-qci82	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 82 released due to Path Failure on the S11 interface.	Increments when a dedicated bearer with QCI 82 is released due to a Path failure on the S11 interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s11-qci83	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 83 released due to Path Failure on the S11 interface.	Increments when a dedicated bearer with QCI 83 is released due to a Path failure on the S11 interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s12-qci80	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 80 released due to Path Failure on S12 interface.	Increments when a dedicated bearer with QCI 80 is released due to a Path failure on S12 interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s12-qci82	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 82 released due to Path Failure on S12 interface.	Increments when a dedicated bearer with QCI 82 is released due to a Path failure on S12 interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s12-qci83	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 83 released due to Path Failure on S12 interface.	Increments when a dedicated bearer with QCI 83 is released due to a Path failure on S12 interface	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-totepsbearrel-dedrsn-pathfail-s4-u-qci80	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 80 released due to Path Failure on S4-U interface.	Increments when a dedicated bearer with QCI 80 is released due to a Path failure on S4-U interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s4-u-qci82	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 82 released due to Path Failure on S4-U interface.	Increments when a dedicated bearer with QCI 82 is released due to a Path failure on S4-U interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-pathfail-s4-u-qci83	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 83 released due to Path Failure on S4-U interface.	Increments when a dedicated bearer with QCI 83 is released due to a Path failure on S4-U interface	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-inactivity-timeout-qci80	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 80 released due to the Inactivity Timeout	Increments when a dedicated bearer with QCI 80 is released due to the Inactivity Timeout	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-inactivity-timeout-qci82	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 82 released due to the Inactivity Timeout	Increments when a dedicated bearer with QCI 82 is released due to the Inactivity Timeout	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-inactivity-timeout-qci83	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 83 released due to the Inactivity Timeout	Increments when a dedicated bearer with QCI 83 is released due to the Inactivity Timeout	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-other-qci80	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 80 released due to Other reason.	Increments when a dedicated bearer with QCI 80 is released due to Other reason	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-other-qci82	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 82 released due to Other reason.	Increments when a dedicated bearer with QCI 82 is released due to Other reason	Per SAEGW Service	Standard
saegw	sgw-totepsbearrel-dedrsn-other-qci83	INT32	Incremental	active	The total number of Dedicated Bearers with QCI 83 released due to Other reason.	Increments when a dedicated bearer with QCI 83 is released due to Other reason	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-qci80totbyte	INT32	Incremental	active	The total number of uplink data bytes received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 80	Increments when the S-GW (as part of the SAEGW) receives an uplink data byte for a bearer with a QCI of 80	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-qci82totbyte	INT32	Incremental	active	The total number of uplink data bytes received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 82	Increments when the S-GW (as part of the SAEGW) receives an uplink data byte for a bearer with a QCI of 82	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-qci83totbyte	INT32	Incremental	active	The total number of uplink data bytes received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 83	Increments when the S-GW (as part of the SAEGW) receives an uplink data byte for a bearer with a QCI of 83	Per SAEGW Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
saegw	sgw-datastat-ul-qci80totpkt	INT32	Incremental	active	The total number of uplink data packets received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 80	Increments when the S-GW (as part of the SAEGW) receives an uplink data packet for a bearer with a QCI of 80	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-qci82totpkt	INT32	Incremental	active	The total number of uplink data packets received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 82	Increments when the S-GW (as part of the SAEGW) receives an uplink data packet for a bearer with a QCI of 82	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-qci83totpkt	INT32	Incremental	active	The total number of uplink data packets received by the S-GW (as part of the SAEGW) for a bearer with a QCI of 83	Increments when the S-GW (as part of the SAEGW) receives an uplink data packet for a bearer with a QCI of 83	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-dropstat-qci80totbyte	INT32	Incremental	active	The total number of uplink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 80	Increments when the S-GW (as part of the SAEGW) drops an uplink data byte for a bearer with a QCI of 80	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-dropstat-qci82totbyte	INT32	Incremental	active	The total number of uplink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 82	Increments when the S-GW (as part of the SAEGW) drops an uplink data byte for a bearer with a QCI of 82	Per SAEGW Service	Standard
saegw	sgw-datastat-ul-dropstat-qci83totbyte	INT32	Incremental	active	The total number of uplink data bytes dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 83	Increments when the S-GW (as part of the SAEGW) drops an uplink data byte for a bearer with a QCI of 83	Per SAEGW Service	Standard

saegw	sgw-s8-ul-drop-qci82totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 82 on the S8 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data packet for a bearer with a QCI of 82 on the S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-ul-drop-qci83totpkt	INT64	Incremental	active	The total number of uplink data packets dropped by the S-GW (as part of the SAEGW) for a bearer with a QCI of 83 on the S8 interface.	Increments when the S-GW (as part of the SAEGW) drops an uplink data packet for a bearer with a QCI of 83 on the S8 interface	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci80totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 80 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 80 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci82totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 82 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 82 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci83totbyte	INT64	Incremental	active	The total number of downlink data bytes accepted by the S-GW for a bearer with a QCI 83 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data byte for a bearer with a QCI 83 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci80totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 80 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 80 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci82totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 82 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 82 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-qci83totpkt	INT64	Incremental	active	The total number of downlink data packets accepted by the S-GW for a bearer with a QCI 83 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW accepts a downlink data packet for a bearer with a QCI 83 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci80totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 80 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 80 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci82totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 82 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 82 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci83totbyte	INT64	Incremental	active	The total number of downlink data bytes dropped by the S-GW for a bearer with a QCI 83 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data byte for a bearer with a QCI 83 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci80totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 80 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 80 on the S8 interface.	Per SAEGW Service	Standard
saegw	sgw-s8-dl-drop-qci82totpkt	INT64	Incremental	active	The total number of downlink data packets dropped by the S-GW for a bearer with a QCI 82 on the S8 interface on the SGW (as part of the SAEGW).	Increments when the S-GW drops a downlink data packet for a bearer with a QCI 82 on the S8 interface.	Per SAEGW Service	Standard

epdg	roaming-ho-sess-uicc-active	INT32	Gauge	active	Total number of active ePDG roaming handoff sessions.	Increases/decreases respectively on creation/deletion of ePDG roaming-handoff session.	ePDG Service. Statistics type: Gauge	Standard
epdg	roaming-ho-sess-uicc-setup	INT32	Incremental	active	Total number of ePDG roaming handoff session setup success.	Increments when a ePDG roaming-handoff session is created..	ePDG Service. Statistics type: Counter	Standard
epdg	roaming-ho-sess-uicc-attempts	INT32	Incremental	active	Total number of ePDG roaming handoff session setup attempts.	Increments when a ePDG roaming-handoff session is attempted.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	roaming-ho-sess-uicc-failures	INT32	Incremental	active	Total number of ePDG roaming handoff session attempts failed.	Increments upon failure of ePDG roaming-handoff session.	ePDG Service. Statistics type: Counter	Standard
epdg	roaming-sess-non-uicc-active	INT32	Gauge	active	Total number of active ePDG roaming non UICC sessions.	Increases/decreases respectively on creation/deletion of ePDG roaming non UICC session.	ePDG Service. Statistics type: Gauge	Standard
epdg	roaming-sess-non-uicc-setup	INT32	Incremental	active	Total number of ePDG roaming non UICC session setup success.	Increments when a ePDG roaming non UICC session is created..	ePDG Service. Statistics type: Counter	Standard
epdg	roaming-sess-non-uicc-attempts	INT32	Incremental	active	Total number of ePDG roaming non UICC session setup attempts.	Increments when a ePDG roaming non UICC session is attempted.	ePDG Service. Statistics type: Counter	Standard
epdg	roaming-sess-non-uicc-failures	INT32	Incremental	active	Total number of ePDG roaming non UICC session attempts failed.	Increments upon failure of ePDG roaming non UICC session.	ePDG Service. Statistics type: Counter	Standard
epdg	alt-epdg-selection-mandatory	INT32	Incremental	active	Total number of ePDG sessions for which alternate ePDG zone record with action mandate is selected.	Increments when a zone record with action mandate is seleceted.	ePDG Service. Statistics type: Counter	Standard
epdg	dbr-from-pgw	INT32	Incremental	active	Indicates the number of disconnected sessions due to Delete Bearer Request GTP message coming from PGW.	When call is cleared from PGW.	ePDG Service. Statistics type: Counter	Standard
epdg	gtpc-abort-sess-cmd	INT32	Incremental	active	Indicates the number of disconnected sessions due to GTP control plane path failure.	When GTP control plane path failure occurs between PGW and ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg	gtpu-abort-sess-cmd	INT32	Incremental	active	Indicates the number of disconnected sessions due to GTP user plane path failure.	when GTP user plane path failure occurs between PGW and ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg	gtpu-error-indication	INT32	Incremental	active	Indicates the number of disconnected sessions due to error indication message on GTP user plane.	When PGW sends a GTP error indication message for the default bearer.	ePDG Service. Statistics type: Counter	Standard
epdg	pgw-not-reachable	INT32	Incremental	active	Indicates the number of disconnected sessions due to PGW being down.	When PGW is unreachable/down.	ePDG Service. Statistics type: Counter	Standard
epdg	reject-from-pgw	INT32	Incremental	active	Indicates the number of disconnected sessions due to PGW rejecting the create session request.	When PGW rejects the Create Session Request sent by ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg	invalid-apn	INT32	Incremental	active	: ePDG shall be rejecting the IKE_AUTH_REQUEST message if invalid APN is received and increment this bulkstats before communicating over SWm interface.	UE sending invalid APN in terms of format or length over SWu interface in IKE_AUTH_REQUEST message.	ePDG Service. Statistics type: Counter	Standard
epdg	totattempt-failure	INT32	Incremental	active	Total number of epdg session attempts failed.	Increments upon failure of creating IPv4/IPv6/Dual Stack ePDG sessions.	ePDG Service. Statistics type: Counter	Standard
epdg	totpmipv6-attempt	INT32	Incremental	active	Total number of PMIPv6 attempts.	Increments upon attempting to send PBU over PMIPv6 (S2b) Interface after successful authentication with AAA for ePDG session establishment.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	totpmipv6-success	INT32	Incremental	active	Total number of PMIPv6 success.	Increments upon successful IPv4/IPv6/Dual Stack ePDG session after receiving PBA from PGW over PMIPv6 (S2b) Interface.	ePDG Service. Statistics type: Counter	Standard
epdg	totpmipv6-failure	INT32	Incremental	active	Total number of PMIPv6 failures.	Increments upon failure of IPv4/IPv6/Dual Stack ePDG session establishment for not receiving PBA or invalid PBA is received with MIP-Error-Code over PMIPv6 (S2b) Interface.	ePDG Service. Statistics type: Counter	Standard
epdg	pgw-fallback-attempted	INT32	Incremental	active	Indicates number of PGW fallback attempts made.	Increases with each fallback attempt of contacting new PGW based on DNS query resolution.	ePDG Service. Statistics type: Counter	Standard
epdg	pgw-fallback-succeeded	INT32	Incremental	active	Indicates number of PGW fallback attempts successfully completed.	Increases when PGW has responded for the fallback attempt.	ePDG Service. Statistics type: Counter	Standard
epdg	pgw-fallback-failed	INT32	Incremental	active	Indicates number of PGW fallback attempts failed.	Increases when PGW does not responds for the fallback attempt.	ePDG Service. Statistics type: Counter	Standard
epdg	pgw-fallback-no-alternate-pgw	INT32	Incremental	active	Indicates number of times the call failed due to no PGW being responding to the fallback attempts from the DNS query resolved PGW candidate list.	None of the PGW from the DNS query resolution list responded to the ePDG call establishment attempt.	ePDG Service. Statistics type: Counter	Standard
epdg	non-uicc-sess-active	INT32	Gauge	active	Number of active non uicc session.	Increases/decreases respectively on creation/deletion of non uicc session .	ePDG Service. Statistics type: Gauge	Standard
epdg	non-uicc-sess-setup	INT32	Incremental	active	Number of non-uicc sessions setup.	Increments when a non uicc session is created.	ePDG Service. Statistics type: Counter	Standard
epdg	non-uicc-sess-released	INT32	Incremental	active	Number of non-uicc sessions released.	Increments when a non uicc session is released.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-ue-support	INT32	Incremental	active	Total number of subscribers sending payload REDIRECTED_TO or REDIRECTED_FROM to ePDG for reselection.	Increments when ePDG receives REDIRECTED_TO or REDIRECTED_FROM payload from subscribers.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-pgw-id-not-recv	INT32	Incremental	active	Total number of subscirbers reselection are failed due to pgw-id(PGW IP address/FQDN) is not coming from AAA server.	Increments when AAA server is not sending PGW-ID to EPDG for reselection .	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-curr-epdg-collocated	INT32	Incremental	active	Total number of subscribers reselection aborted due to current ePDG is already closets to selected PGW or reselected ePDG is same to current ePDG.	Increments when current ePDG is already closets to selected PGW or reselected ePDG is same to current ePDG	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-selection-required	INT32	Incremental	active	Total number of subscribers eligible for redirect after checking PGW-ID is present,current ePDG is not closets to selected PGW or reselected ePDG is not same to current ePDG.	Increments when PGW-ID is present,current ePDG is not closets to selected PGW or reselected ePDG is not same to current ePDG	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	redirect-selection-aborted	INT32	Incremental	active	Total number of subscribers reselection aborted due to feature not enabled under apn-profile, local pgw preferred configured under ePDG service or topology not enabled under ePDG service	Increments when feature not enabled under apn-profile, local pgw preferred configured under ePDG service or topology not enabled under ePDG service	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-feature-not-enabled	INT32	Incremental	active	Total number of subscirbers redirection aborted due to feature not enabled.	Increments when redirect feature not enabled under apn-profile.	ePDG Service. Statistics type: Counter	Standard
epdg	redirected-session	INT32	Incremental	active	Total number of subscirbers sending REDIRECTED_FROM payload to ePDG.	Increments when ePDG receives REDIRECTED_FROM payload from subscriber.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-local-pgw-preferred	INT32	Incremental	active	Total number of subscribers redirection aborted due to local pgw selection.	Increments when local pgw selection configured under epdg service.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-topology-not-enabled	INT32	Incremental	active	Total number of subscribers redirection aborted due to topology not enabled.	Increments when topology not configured under epdg service	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-zone-action-ignored	INT32	Incremental	active	Total number of subscriber's redirection aborted due alternate ePDG zone record with action ignore selected.	Increments when a zone record with action ignore is selected.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-selection-initiated	INT32	Incremental	active	Total number of subscirbers redirection initiated to get the alternate ePDG address using DNS server.	Increments when DNS SNAPTR request initiated to get ePDG ip address.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-selection-succeeded	INT32	Incremental	active	Total number of subscribers successfully redirected to new ePDG after receiving the redirected ePDG IP address from DNS server.	Increments after successfully sending redirected ePDG IP address to subscriber.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-selection-failed	INT32	Incremental	active	Total number of subscribers reselection are failed due to no DNS server, no DNS server response,no DNS server records,IP transport mismatch on Swu interface or Multi-PDN.	Increments when no DNS server configured, no DNS server response,no DNS server records,IP transport mismatch on Swu interface or Multi-PDN in reselection.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-dns-failure	INT32	Incremental	active	Total number of subscribers reselection failed due to no DNS configured or no response from DNS server.	Increments when no DNS configured or no response from DNS server	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-dns-no-record	INT32	Incremental	active	Total number of subscribers reselection failed due to no DNS records	Increments when no DNS records response from DNS server.	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-IP-trans-mismatch	INT32	Incremental	active	Total number of subscribers reselection failed due to IP transport mismatch on SWu.	Increments when reselected IP transport mismatch on SWu	ePDG Service. Statistics type: Counter	Standard
epdg	redirect-multi-pdn	INT32	Incremental	active	Total number of subscribers reselection failed due to multi-pdn.	Increments when subscriber already attached to ePDG with different APN.	ePDG Service. Statistics type: Counter	Standard
epdg	totgtp-attempt	INT32	Incremental	active	Total number of GTPv2 call attempts.	Increments upon attempting to send Create Session Request over GTPv2 (S2b) Interface after successful authentication with AAA for ePDG session establishment.	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	totgtp-success	INT32	Incremental	active	Total number of GTPv2 success.	Increments upon successful IPv4/IPv6/Dual Stack ePDG session establishment after receiving Create Session Response from PGW over GTPv2 (S2b) Interface.	ePDG Service Statistics type: Counter	Standard
epdg	totgtp-failure	INT32	Incremental	active	Total number of GTPv2 failures.	Increments upon failure of IPv4/IPv6/Dual Stack ePDG session establishment for not receiving Create Session Response (CSResp) or invalid CSResp is received with EGTP_CAUSE_REQUEST_REJECTED over GTPv2 (S2b) Interface.	ePDG Service Statistics type: Counter	Standard
epdg	totgtp-curr-ue-in-sys	INT32	Gauge	active	Total number of active GTP user equipment (UE) in the system.	Increments upon successful GTP session setup of a new UE; further session setup from the same UE will not increase the variable. Decrements when all the active GTP sessions of a UE are released.	ePDG Service Statistics type: Gauge	Standard
epdg	tot-curr-volte-calls	INT32	Gauge	active	Total number of active GTP user equipment (UE) in the system with VoLTE sessions.	Increments upon successful creation of first VoLTE bearer of new UE; Decrements on deletion of last VoLTE bearer of a UE	ePDG Service Statistics type: Gauge	Standard
epdg	disconnect-total	INT32	Incremental	active	Total number of disconnected sessions.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions locally, remotely (by UE) or by PGW.	ePDG Service. Statistics type: Counter	Standard
epdg	disconnect-local	INT32	Incremental	active	Total number of disconnected sessions locally.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions locally because of unavailable resources, session setup/absolute/long duration timeout and admin clear.	ePDG Service. Statistics type: Counter	Standard
epdg	disconnect-ue	INT32	Incremental	active	Total number of disconnected sessions by UEs.	Increments on UE-initiated call tear down after call setup.	ePDG Service. Statistics type: Counter	Standard
epdg	disconnect-pgw	INT32	Incremental	active	Total number of disconnected sessions by PGW.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions by PGW upon receiving BRI message.	ePDG Service. Statistics type: Counter	Standard
epdg	disconnect-remote	INT32	Incremental	active	Total number of disconnected sessions remotely before connect.	Increments on UE-initiated call tear down before call setup.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	sess-disconnect-remote	INT32	Incremental	active	Total number of sessions disconnected remotely.	A UE-initiated session disconnect in ePDG after the call is in the CONNECTED state.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-admin	INT32	Incremental	active	Total number of sessions disconnected by Admin.	Incremented for all sessions in a CONNECTED state that are cleared due to an Admin Disconnect disconnect reason.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-idle-timeout	INT32	Incremental	active	Total number of sessions disconnected due to idle-timeout.	Number of sessions terminated because of idle timer timeout.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-abs-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Absolute timeout.	Number of sessions terminated because of absolute timeout.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-longdur-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Long duration timeout.	Number of sessions terminated because of long duration timeout.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-sesssetup-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Session setup timeout.	Number of sessions terminated because of session setup timeout.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-noresource	INT32	Incremental	active	Total number of sessions disconnected due to no resource.	Number of sessions terminated because of no resources.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-authfail	INT32	Incremental	active	Total number of sessions disconnected due to Auth failure.	Incremented on receiving a DEA message with invalid result code or with an invalid AVP attribute, DER timeout for not receiving DEA, a missing attribute in DEA message, an invalid W-APN format, or an invalid NAI format.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-flowadd-failure	INT32	Incremental	active	Total number of sessions disconnected due to Flow add failure.	Number of sessions terminated because of flow add failure.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-invalid-dest	INT32	Incremental	active	Total number of sessions disconnected due to Invalid dest-context.	Number of sessions terminated because of invalid destination context. This variable is proprietary.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-srcaddr-violation	INT32	Incremental	active	Total number of sessions disconnected due to Source address violation.	Number of sessions terminated because of source IP address violation.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-lmarevoc	INT32	Incremental	active	Total number of sessions disconnected due to LMA Revocations.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions by LMA upon receiving BRI message.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	sess-disconnect-dupreq	INT32	Incremental	active	Total number of sessions disconnected due to Duplicate Request.	Incremented on receiving a new call when a previous call exists in the CONNECTED state with the same NAI and APN on the same/different Session Manager. When this occurs, the original call is cleared.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-addrassign-failure	INT32	Incremental	active	Total number of sessions disconnected due to Addr assign failure.	Number of sessions terminated because of an address assignment failure. This variable is proprietary.	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-handoff	INT32	Incremental	active	Total number of sessions disconnected due to LTE to Wi-Fi Handoff.	Increases for failed session hand over from LTE to Wi-Fi Network..	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-invalid-qci	INT32	Incremental	active	Total the number of sessions disconnected due to invalid QCI received from AAA server.	Increments when invalid QCI value is received from AAA server	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-misc	INT32	Incremental	active	Total number of sessions disconnected due to Miscellaneous reasons.	Incremented for all failures and all remaining disconnect reasons (for example, for IPSec/PMIPv6, no-response or remote-error-notification).	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-aaa-admin	INT32	Incremental	active	Total number of sessions disconnected due to AAA Admin clear.	ASR triggerred by AAA server received in	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-aaa-no-non-3gpp-subscription	INT32	Incremental	active	Total number of sessions disconnected due to AAA cause codes mapped to 3GPP IKEv2 private notify payload error type #9000 No Non 3gpp Subscription	Increments when AAA rejects with cause no non 3gpp subscription with 3gpp error notify enabled	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-aaa-user-unknown	INT32	Incremental	active	Total number of sessions disconnected due to AAA cause codes mapped to 3GPP IKEv2 private notify payload error type #9001 User Unknown	Increments when AAA rejects with cause user unknwon with 3gpp error notify enabled	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-aaa-illegal-equipment	INT32	Incremental	active	Total number of sessions disconnected due to AAA cause codes mapped to 3GPP IKEv2 private notify error payload type #9006 Illegal ME	Increments when AAA rejects with cause illegal equipment with 3gpp error notify enabled	ePDG Service. Statistics type: Counter	Standard
epdg	sess-disconnect-s2b-network-failure	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type network failure	Increments when any s2b cause code mapped to network failure is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-s2b-msg-failure	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type message failure.	Increments when any s2b cause code mapped to message failure is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-s2b-access-denied	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type access denied.	Increments when any s2b cause code mapped to access denied is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	sess-disconnect-s2b-rat-disallowed	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause code rat disallowed.	Increments when s2b cause rat disallowed is received in create session response	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-roaming-mandatory	INT32	Incremental	active	Total the number of sessions disconnected due to DNS failure when roaming is mandatory.	Increments when DNS query for new EPDG fails (no response or faliure response) for which zone action is mandate.	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-invalid-imei	INT32	Incremental	active	Total the number of sessions disconnected due to Invalid IMEI received from UE.	Increments when Invalid IMEI is received from UE.	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-s2b-context-not-found	INT32	Incremental	active	Total the number of sessions disconnected due GTPv2 cause code Context Not Found.	Increments when PGW sends Context Not Found for any GTPv2 control message.	ePDG Service Statistics type: Counter	Standard
epdg	sess-disconnect-epdg-pcscf-restoration	INT32	Incremental	active	The total number of sessions disconnected due to PGW trigrered Re-Activation request for p-cscf restoration.	Increments when PGW sends Re-Activation Request due to p-cscf restoration	ePDG Service Statistics type: Counter	Standard
epdg	reauth-attempt	INT32	Incremental	active	Total number of fast re-authentication attempts.	Not Defined	Fast re-authentication is not supported for ePDG service. Statistics type: Counter	Standard
epdg	reauth-success	INT32	Incremental	active	Total number of fast re-authentication success.	Not Defined	Fast re-authentication is not supported for ePDG service. Statistics type: Counter	Standard
epdg	reauth-failure	INT32	Incremental	active	Total number of fast re-authentication failure.	Not Defined	Fast re-authentication is not supported for ePDG service. Statistics type: Counter	Standard
epdg	reauthor-attempt	INT32	Incremental	active	Total number of reauthorize attempts.	Increments upon sending an authorize request message to the AAA server.	ePDG Service. Statistics type: Counter	Standard
epdg	reauthor-success	INT32	Incremental	active	Total reauthorize success.	Increments upon receiving an authorize success message from the AAA	ePDG Service. Statistics type: Counter	Standard
epdg	reauthor-failure	INT32	Incremental	active	Total number of reauthorize failure.	Increments upon an authorization failure with the AAA server or if the IPsec tunnel goes down during authorization.	ePDG Service. Statistics type: Counter	Standard
epdg	txbytes	INT64	Incremental	active	The number of bytes transmitted over the port.	Not Defined	EPDG Service	Standard
epdg	txpkts	INT64	Incremental	active	Total IPsec packets sent.	The number of packets transmitted over the port.	ePDG Service. Statistics type: Counter	Standard
epdg	rxbytes	INT64	Incremental	active	The number of bytes received over the port.	Not Defined	ePDG Service	Standard
epdg	rxpkts	INT64	Incremental	active	Total IPsec packets received.	The number of packets received over the port.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	pkt-violation	INT64	Incremental	active	Total packets violations.	Total number of packet violations.	ePDG Service. Statistics type: Counter	Standard

epdg	eap-txinitrequest	INT32	Incremental	active	Total number of EAP request messages forwarded to the EAP server for initial request. This variable is proprietary.	Not Defined	Not Defined	Standard
epdg	eap-txreqfwd	INT32	Incremental	active	Total number of EAP messages transmitted to the EAP server for forward request. This variable is proprietary.	Not Defined	Not Defined	Standard
epdg	eap-rxmobilepassthru	INT32	Incremental	active	Total number of EAP messages received from mobile clients in pass-through mode.	Not Defined	Not Defined	Standard
epdg	eap-rxmobilediscarded	INT32	Incremental	active	Total number of EAP messages transmitted to the EAP server that were discarded. This variable is proprietary.	Not Defined	Not Defined	Standard
epdg	dns-server-not-reachable	INT32	Incremental	active	Indicates number of disconnected sessions due to DNS server not reachable.	When the DNS server is down.	ePDG Service. Statistics type: Counter	Standard
epdg	dns-no-resource-records	INT32	Incremental	active	Indicates number of disconnected sessions when no valid record is fetched from DNS server.	When DNS server has no valid records.	ePDG Service. Statistics type: Counter	Standard
epdg	dns-no-matching-server	INT32	Incremental	active	Indicates number of disconnected sessions when the fetched service parameters from DNS record doesn't matches the configured protocol (GTP/PMIPv6).	When the records at DNS server have no matching service parameters with requested protocol.	ePDG Service. Statistics type: Counter	Standard
epdg	aaa-server-not-reachable	INT32	Incremental	active	Indicates number of disconnected sessions due to AAA server being unreachable from ePDG.	When AAA server is down.	ePDG Service. Statistics type: Counter	Standard
epdg	aaa-invalid-aaa-attribute	INT32	Incremental	active	Indicates number of disconnected sessions due to Authentication failure at AAA server and invalid attributes received in diameter messages coming from AAA server.	When authorization fails at AAA.	ePDG Service. Statistics type: Counter	Standard
epdg	aaa-apn-validation-failed	INT32	Incremental	active	Indicates number of disconnected sessions due to APN mismatch at SWu and SWm interfaces.	APN is different or not present at AAA.	ePDG Service. Statistics type: Counter	Standard
epdg	operator-policy	INT32	Incremental	active	Indicates number of disconnected sessions due to lack of suitable operator policy configuration	When suitable operator policy is not present for a user	ePDG Service. Statistics type: Counter	Standard
epdg	pgwselectfail-initial	INT32	Incremental	active	Indicates number of disconnected sessions due to PGW selection failure in initial state.	PGW selection fails for a new call.	ePDG Service. Statistics type: Counter	Standard
epdg	pgwselectfail-handoff	INT32	Incremental	active	Indicates number of disconnected sessions due to PGW selection failure in handoff state.	PGW selection fails for a handed off call.	ePDG Service. Statistics type: Counter	Standard
epdg	num-disc-invalid-pdn-type	INT32	Incremental	active	Indicates the number of disconnected sessions due to mismatch over PDN type between UE and AAA server.	Incements when there is a mismatch between UE provided and AAA server provided PDN type.	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg	aaa-non-uicc-authorization-failed	INT32	Incremental	active	Indicates number of non-uicc disconnected sessions due to AAA server being.	Increments upon an authorization failure for a non-uicc session with the AAA server.	ePDG Service Statistics type: Counter	Standard
epdg	aaa-network-failure	INT32	Incremental	active	Indicates the number of sessions disconnected due to below specific result code or experimental result code returned by Diameter.	Increments for the diameter result code 3002, 3005, 4003, 5002, 5007-5009, 5012-5016. It also increments for experimental result code 5005.	ePDG Service Statistics type: Counter	Standard
epdg	aaa-network-too-busy	INT32	Incremental	active	Indicates the number of sessions disconnected due to below specific result code or experimental result code returned by Diameter.	Increments for the diameter result code 3004, 4002 and 5006.	ePDG Service Statistics type: Counter	Standard
epdg	aaa-roaming-not-allowed	INT32	Incremental	active	Indicates the number of sessions disconnected due to below specific result code or experimental result code returned by Diameter.	Increments for the diameter experimental result code 5004.	ePDG Service Statistics type: Counter	Standard
epdg	aaa-rat-disallowed	INT32	Incremental	active	Indicates the number of sessions disconnected due to below specific result code or experimental result code returned by Diameter.	Increments for the diameter experimental result code 5450 and 5452.	ePDG Service Statistics type: Counter	Standard
epdg	aaa-no-subscription	INT32	Incremental	active	Indicates the number of sessions disconnected due to below specific result code or experimental result code returned by Diameter.	Increments for the diameter experimental result code 5451.	ePDG Service Statistics type: Counter	Standard
epdg	tx-buffered-pkts	INT64	Incremental	active	Indicates cumulative number of DL packets buffered in the system.	Increments if DL packets are received before Create Session Response is received from PGW.	ePDG Service Statistics type: Counter	Standard
epdg	tx-buffered-bytes	INT64	Incremental	active	Indicates total cumulative number of DL bytes buffered in the system.	Increments if DL bytes are received before Create Session Response is received from PGW.	ePDG Service Statistics type: Counter	Standard
epdg	tx-curr-buffered-pkts	INT64	Gauge	active	Indicates total number of DL packets currently buffered in the system.	Increments if DL packets are received before Create Session Response is received. Decrements after the buffered packets are sent out after Session is Created.	ePDG Service Statistics type: Gauge	Standard
epdg	tx-curr-buffered-bytes	INT64	Gauge	active	Indicates total number of DL bytes currently buffered in the system.	Increments if DL bytes are received before Create Session Response is received from PGW. Decrements after the buffered packets are sent out after Session is Created.	ePDG Service Statistics type: Gauge	Standard
epdg	tx-icmp-error	INT64	Incremental	active	Indicates total number of ICMP error packets sent to the UE.	Increments if any packet is discarded and sent ICMP error message to the UE.	ePDG Service Statistics type: Counter	Standard
epdg	fragmented-pkts	INT64	Incremental	active	Indicates total number of packets fragmented.	Increments if packets are pre fragmented before ESP (Encrypted Security Payload) encapsulation.	ePDG Service Statistics type: Counter	Standard
epdg	tx-fragments	INT64	Incremental	active	Indicates total number of fragments sent to the UE.	Increments for each pre-ESP (Encrypted Security Payload) fragmented packets sent to the UE.	ePDG Service Statistics type: Counter	Standard

epdg-apn	num-qci6_bearer_setup	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-6.	Increments when a dedicated bearer is created for QCI-6.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci6_bearer_released	INT32	Incremental	active	Indicates number of GTP dedicated bearers released for QCI-6.	Increments when a dedicated bearer is released for QCI-6.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci6_bearer_attempt	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-6.	Increments when a dedicated bearer creation starts for QCI-6	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci6_bearer_failure	INT32	Incremental	active	Indicates number of GTP dedicated bearers failed creation for QCI-6.	Increments when a dedicated bearer creation failed for QCI-6.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	num-qci7_bearer_active	INT32	Gauge	active	Indicates number of active GTP dedicated bearers for QCI-7.	Increases/decreases respectively on creation/deletion of dedicated bearer for QCI-7.	ePDG Service Statistics type: Gauge	Standard
epdg-apn	num-qci7_bearer_setup	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-7.	Increments when a dedicated bearer is created for QCI-7.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci7_bearer_released	INT32	Incremental	active	Indicates number of GTP dedicated bearers released for QCI-7.	Increments when a dedicated bearer is released for QCI-7.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci7_bearer_attempt	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-7.	Increments when a dedicated bearer creation starts for QCI-7	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci7_bearer_failure	INT32	Incremental	active	Indicates number of GTP dedicated bearers failed creation for QCI-7.	Increments when a dedicated bearer creation failed for QCI-7.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	num-qci8_bearer_active	INT32	Gauge	active	Indicates number of active GTP dedicated bearers for QCI-8.	Increases/decreases respectively on creation/deletion of dedicated bearer for QCI-8.	ePDG Service Statistics type: Gauge	Standard
epdg-apn	num-qci8_bearer_setup	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-8.	Increments when a dedicated bearer is created for QCI-8.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci8_bearer_released	INT32	Incremental	active	Indicates number of GTP dedicated bearers released for QCI-8.	Increments when a dedicated bearer is released for QCI-8.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci8_bearer_attempt	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-8.	Increments when a dedicated bearer creation starts for QCI-8	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci8_bearer_failure	INT32	Incremental	active	Indicates number of GTP dedicated bearers failed creation for QCI-8.	Increments when a dedicated bearer creation failed for QCI-8.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	num-qci9_bearer_active	INT32	Gauge	active	Indicates number of active GTP dedicated bearers for QCI-9.	Increases/decreases respectively on creation/deletion of dedicated bearer for QCI-9.	ePDG Service Statistics type: Gauge	Standard
epdg-apn	num-qci9_bearer_setup	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-9.	Increments when a dedicated bearer is created for QCI-9.	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg-apn	num-qci9_bearer_released	INT32	Incremental	active	Indicates number of GTP dedicated bearers released for QCI-9.	Increments when a dedicated bearer is released for QCI-9.	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci9_bearer_attempt	INT32	Incremental	active	Indicates number of GTP dedicated bearers setup for QCI-9.	Increments when a dedicated bearer creation starts for QCI-9	ePDG Service Statistics type: Counter	Standard
epdg-apn	num-qci9_bearer_failure	INT32	Incremental	active	Indicates number of GTP dedicated bearers failed creation for QCI-9.	Increments when a dedicated bearer creation failed for QCI-9.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	cursess	INT32	Gauge	active	Total number of current sessions created under epdg-service.	Increments upon successful IPv4/IPv6/Dual stack session created on ePDG over S2b (PMIPv6 or GTPv2) interface and decrements on session teardown.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-pmipv6-ipv4	INT32	Gauge	active	Number of current PMIPv6 IPv4 stack sessions.	Increments upon successful IPv4 stack sessions created on ePDG over PMIPv6 (S2b) and decrements on session teardown.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-pmipv6-ipv6	INT32	Gauge	active	Number of current PMIPv6 IPv6 stack sessions	Increments upon successful IPv6 stack sessions created on ePDG over PMIPv6 (S2b) and decrements on session teardown.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-pmipv6-ipv4v6	INT32	Gauge	active	Number of current PMIPv6 dual stack sessions.	Increments upon successful dual stack sessions created on ePDG over PMIPv6 (S2b) and decrements on session teardown.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-gtp-ipv4	INT32	Gauge	active	Total number of active GTP-IPv4 sessions.	Increases when a new GTP based IPv4 call is successfully created; decreases on releasing the call.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-gtp-ipv6	INT32	Gauge	active	Total number of active GTP-IPv6 sessions.	Increases when a new GTP based IPv6 call is successfully created; decreases on releasing the call.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	curses-gtp-ipv4v6	INT32	Gauge	active	Total number of active GTP-IPv4v6 sessions.	Increases when a new GTP based IPv4v6 (dual stack) call is successfully created; decreases on releasing the call.	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	tot-success-handoff	INT32	Incremental	active	Total Number of handoff sessions.	Incremented for sessions successfully handed over from LTE to Wi-Fi Network.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	tot-success-initial	INT32	Incremental	active	Total Number of Initial attach sessions.	Incremented for sessions established due to initial WLAN attach (non Handoff).	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg-apn	tot-curr-volte-calls	INT32	Gauge	active	Total number of active GTP user equipment (UE) in the system with VoLTE sessions.	Increments upon successful creation of first VoLTE bearer of new UE; Decrements on deletion of last VoLTE bearer of a UE	ePDG Service Statistics type: Gauge	Standard
epdg-apn	totpmipv6-attempt	INT32	Incremental	active	Total number of PMIPv6 attempts.	Increments upon attempting to send PBU over PMIPv6 (S2b) Interface after successful authentication with AAA for ePDG session establishment.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	totpmipv6-success	INT32	Incremental	active	Total number of PMIPv6 success.	Increments upon successful IPv4/IPv6/Dual Stack ePDG session after receiving PBA from PGW over PMIPv6 (S2b) Interface.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	totpmipv6-failure	INT32	Incremental	active	Total number of PMIPv6 failures.	Increments upon failure of IPv4/IPv6/Dual Stack ePDG session establishment for not receiving PBA or invalid PBA is received with MIP-Error-Code over PMIPv6 (S2b) Interface.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	non-uicc-sess-active	INT32	Gauge	active	Number of active non uicc session.	Increases/decreases respectively on creation/deletion of non uicc session .	ePDG Service. Statistics type: Gauge	Standard
epdg-apn	non-uicc-sess-setup	INT32	Incremental	active	Number of non-uicc sessions setup.	Increments when a non uicc session is created.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	non-uicc-sess-released	INT32	Incremental	active	Number of non-uicc sessions released.	Increments when a non uicc session is released.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	totgtp-attempt	INT32	Incremental	active	Total number of GTPv2 call attempts.	Increments upon attempting to send Create Session Request over GTPv2 (S2b) Interface after successful authentication with AAA for ePDG session establishment.	ePDG Service Statistics type: Counter	Standard
epdg-apn	totgtp-success	INT32	Incremental	active	Total number of GTPv2 success.	Increments upon successful IPv4/IPv6/Dual Stack ePDG session establishment after receiving Create Session Response from PGW over GTPv2 (S2b) Interface.	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg-apn	totgtp-failure	INT32	Incremental	active	Total number of GTPv2 failures.	Increments upon failure of IPv4/IPv6/Dual Stack ePDG session establishment for not receiving Create Session Response (CSResp) or invalid CSResp is received with EGTP_CAUSE_REQUEST_REJECTED over GTPv2 (S2b) Interface.	ePDG Service Statistics type: Counter	Standard
epdg-apn	disconnect-total	INT32	Incremental	active	Total number of disconnected sessions.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions locally, remotely (by UE) or by PGW.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	disconnect-local	INT32	Incremental	active	Total number of disconnected sessions locally.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions locally because of unavailable resources, session setup/absolute/long duration timeout and admin clear.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	disconnect-ue	INT32	Incremental	active	Total number of disconnected sessions by UEs.	Increments on UE-initiated call tear down after call setup.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	disconnect-pgw	INT32	Incremental	active	Total number of disconnected sessions by PGW.	Increments upon disconnecting an IPv4/IPv6/Dual Stack sessions by PGW upon receiving BRI message.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	disconnect-aaa	INT32	Incremental	active	Not Defined	Not Defined	ePDG service	Standard
epdg-apn	sess-disconnect-remote	INT32	Incremental	active	Total number of sessions disconnected remotely.	A UE-initiated session disconnect in ePDG after the call is in the CONNECTED state.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-admin	INT32	Incremental	active	Total number of sessions disconnected by Admin.	Incremented for all sessions in a CONNECTED state that are cleared due to an Admin Disconnect disconnect reason.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-idle-timeout	INT32	Incremental	active	Total number of sessions disconnected due to idle-timeout.	Number of sessions terminated because of idle timer timeout.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-abs-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Absolute timeout.	Number of sessions terminated because of absolute timeout.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-longdur-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Long duration timeout.	Number of sessions terminated because of long duration timeout.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-sesssetup-timeout	INT32	Incremental	active	Total number of sessions disconnected due to Session setup timeout.	Number of sessions terminated because of session setup timeout.	ePDG Service. Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg-apn	sess-disconnect-noresource	INT32	Incremental	active	Total number of sessions disconnected due to no resource.	Number of sessions terminated because of no resources.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-dupreq	INT32	Incremental	active	Total number of sessions disconnected due to Duplicate Request.	Incremented on receiving a new call when a previous call exists in the CONNECTED state with the same NAI and APN on the same/different Session Manager. When this occurs, the original call is cleared.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-handoff	INT32	Incremental	active	Total number of sessions disconnected due to LTE to Wi-Fi Handoff.	Increases for failed session hand over from LTE to Wi-Fi Network..	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-misc	INT32	Incremental	active	Total number of sessions disconnected due to Miscellaneous reasons.	Incremented for all failures and all remaining disconnect reasons (for example, for IPSec/PMIPv6, no-response or remote-error-notification).	ePDG Service. Statistics type: Counter	Standard
epdg-apn	dbr-from-pgw	INT32	Incremental	active	Indicates the number of disconnected sessions due to Delete Bearer Request GTP message coming from PGW.	When call is cleared from PGW.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	gtpc-abort-sess-cmd	INT32	Incremental	active	Indicates the number of disconnected sessions due to GTP control plane path failure.	When GTP control plane path failure occurs between PGW and ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	gtpu-abort-sess-cmd	INT32	Incremental	active	Indicates the number of disconnected sessions due to GTP user plane path failure.	when GTP user plane path failure occurs between PGW and ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	gtpu-error-indication	INT32	Incremental	active	Indicates the number of disconnected sessions due to error indication message on GTP user plane.	When PGW sends a GTP error indication message for the default bearer.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	pgw-not-reachable	INT32	Incremental	active	Indicates the number of disconnected sessions due to PGW being down.	When PGW is unreachable/down.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	reject-from-pgw	INT32	Incremental	active	Indicates the number of disconnected sessions due to PGW rejecting the create session request.	When PGW rejects the Create Session Request sent by ePDG.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-aaa-admin	INT32	Incremental	active	Total number of sessions disconnected due to AAA Admin clear.	ASR triggerred by AAA server received in	ePDG Service. Statistics type: Counter	Standard
epdg-apn	sess-disconnect-s2b-network-failure	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type network failure	Increments when any s2b cause code mapped to network failure is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard
epdg-apn	sess-disconnect-s2b-msg-failure	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type message failure.	Increments when any s2b cause code mapped to message failure is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard
epdg-apn	sess-disconnect-s2b-access-denied	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause codes mapped to private IKEv2 notify payload type access denied.	Increments when any s2b cause code mapped to access denied is received in create session response from PGW	ePDG Service Statistics type: Counter	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
epdg-apn	sess-disconnect-s2b-rat-disallowed	INT32	Incremental	active	Total the number of sessions disconnected due to s2b cause code rat disallowed.	Increments when s2b cause rat disallowed is received in create session response	ePDG Service Statistics type: Counter	Standard
epdg-apn	sess-disconnect-s2b-context-not-found	INT32	Incremental	active	Total the number of sessions disconnected due GTPv2 cause code Context Not Found	Increments when PGW sends Context Not Found for any GTPv2 control message.	ePDG Service Statistics type: Counter	Standard
epdg-apn	sess-disconnect-epdg-pcscf-restoration	INT32	Incremental	active	The total number of sessions disconnected due to PGW trigrered Re-Activation request for p-cscf restoration.	Increments when PGW sends Re-Activation Request due to p-cscf restoration	ePDG Service Statistics type: Counter	Standard
epdg-apn	txbytes	INT64	Incremental	active	The number of bytes transmitted over the port.	Not Defined	ePDG service	Standard
epdg-apn	txpkts	INT64	Incremental	active	Total IPsec packets sent.	The number of packets transmitted over the port.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	rxbytes	INT64	Incremental	active	The number of bytes received over the port.	Not Defined	ePDG service	Standard
epdg-apn	rxpkts	INT64	Incremental	active	Total IPsec packets received.	The number of packets received over the port.	ePDG Service. Statistics type: Counter	Standard
epdg-apn	pkt-violation	INT64	Incremental	active	Total packets violations.	Total number of packet violations.	ePDG Service. Statistics type: Counter	Standard
sgs	vpnname	STRING	Primary-key	active	The name of the VPN associated with the interface.	Configuration	Per Context Level	Standard
sgs	vpnid	INT32	Primary-key	active	The identification number of the context configured on the system that is currently facilitating the SGS service. This is an internal reference number.	Generated During System Startup	Per Context Level	Standard
sgs	servname	STRING	Primary-key	active	The name of the SGS-VLR service for which these statistics are being displayed.	Configuration	Per SGS Service	Standard

bcmcs	send-error	INT32	Incremental	active	The total number of registration replies for which errors were experienced during transmission.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	hash-error	INT32	Incremental	active	The total number of registration requests that had internal hash lookup errors.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	decode-error	INT32	Incremental	active	The total number of registration requests that had decode errors.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	unhandled	INT32	Incremental	active	The total number of registration requests that had unhandled errors.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	seqerror	INT32	Incremental	active	The total number of registration requests that had sequence numbers that were not acceptable.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-unspec	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 80H (Registration Denied - reason unspecified)	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-adminprohib	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 81H (Registration Denied - administratively prohibited).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-noresource	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 82H (Registration Denied - insufficient resources).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-auth	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 83H (Registration Denied - mobile node failed authentication).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-idmismatch	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 85H (Registration Denied - identification mismatch).	Not Defined	Per PDSN, per PF, per session	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
bcmcs	deny-badrequest	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 86H (Registration Denied - poorly formed request).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-unknownbsn	INT32	Incremental	active	This proprietary counter indicates the total number of A11-BC registration requests that were denied unknown BSN address.	#NAME?	Per PDSN, per PF, per session	Standard
bcmcs	deny-revtununavail	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 89H (Registration Denied - requested reverse tunnel unavailable).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-revtunreq	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 8AH (Registration Denied - reverse tunnel is mandatory and T-bit not set).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-unrecogvend	INT32	Incremental	active	The total number of registration requests that were denied using reply code of 8DH (Registration Denied - unsupported vendor ID or unable to interpret data in the CVSE).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-sessclosed	INT32	Incremental	active	The total number of registration requests that were denied using an error code 0x8E for absent RP sessions. Refer to the session-already-closed keyword for the registration-deny command in the PDSN Configuration Mode chapter of the Command Line Interface Reference for additional information.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-bsninfo	INT32	Incremental	active	The total number of registration requests that were denied because BSN information was unavailable.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-noresource-nosessmgr	INT32	Incremental	active	The total number of RRQ denied due to Insufficient resource, no session manager reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-noresource-nomem	INT32	Incremental	active	The total number of RRQ denied due to Insufficient resource, no memory reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-noresource-sessmgrretried	INT32	Incremental	active	The total number of RRQ denied due to Insufficient resource, session managers retried reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-noresource-inputq	INT32	Incremental	active	The total number of RRQ denied due to Insufficient resource, input queue exceeded reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-badrequest-alrdorm	INT32	Incremental	active	The total number of RRQ denied due to poorly formed request, session already dormant reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-badrequest-alractive	INT32	Incremental	active	The total number of RRQ denied due to poorly formed request, already active reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-badrequest-other	INT32	Incremental	active	The total number of RRQ denied due to poorly formed request, other reason reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-cong-drop	INT32	Incremental	active	The total number of denied registration replies discarded due to congestion. Refer to the Configuring Congestion Control chapter of this guide for additional information.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-cong-adminprohib	INT32	Incremental	active	The total number of denied registration replies that were sent with a reply code of 81H (Registration Denied - administratively prohibited) due to congestion. Refer to the Configuring Congestion Control chapter of this guide for additional information.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	deny-cong-unknownbsn	INT32	Incremental	active	This proprietary counter indicates the total number of A11-BC service requests denied due to congestion. Refer to the Configuring Congestion Control chapter of this guide for additional information.	#NAME?	Per PDSN, per PF, per session	Standard
bcmcs	upd-total	INT32	Incremental	active	The total number of registration updates that were transmitted.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-accept	INT32	Incremental	active	The total number of registration updates that were accepted by the PCF.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-denied	INT32	Incremental	active	The total number of registration updates that were denied.	Not Defined	Per PDSN, per PF, per session	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
bcmcs	upd-unack	INT32	Incremental	active	The total number of registration updates that were not acknowledged.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-trans	INT32	Incremental	active	The total number of initial registration updates that were transmitted.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-ttlnoretrans	INT32	Incremental	active	The total number of registration updates that were not re-transmitted due to TTL expiration.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-retrans	INT32	Incremental	active	The total number of registration updates that were re-transmitted.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-received	INT32	Incremental	active	The total number of registration acknowledgements that were received.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-ack-received	INT32	Incremental	active	The total number of registration acknowledgements that were received.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-discard	INT32	Incremental	active	The total number of registration acknowledgements that were discarded.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-senderror	INT32	Incremental	active	The total number of registration updates for which errors were experienced during transmission.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-lifetime	INT32	Incremental	active	The total number of registration updates that the send reason was Lifetime Expiry reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-uplyrinit	INT32	Incremental	active	The total number of registration updates that were initiated by upper processing layers. This statistic is obsolete.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-other	INT32	Incremental	active	The total number of registration updates that were sent due to reasons other than those listed here.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upd-smgrexit	INT32	Incremental	active	The total number of registration updates that the send reason was that the session manager exited reported per service.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upddeny-unspec	INT32	Incremental	active	The total number of denied registration updates that were sent with a reply code of 80H (Registration Denied - reason unspecified).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upddeny-adminprohib	INT32	Incremental	active	The total number of denied registration updates that were sent with a reply code of 81H (Registration Denied - administratively prohibited).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upddeny-auth	INT32	Incremental	active	The total number of denied registration updates that were sent with a reply code of 83H (Registration Denied - mobile node failed authentication).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upddeny-idmismatch	INT32	Incremental	active	The total number of denied registration updates that were sent with a reply code of 85H (Registration Denied - identification mismatch).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	upddeny-badrequest	INT32	Incremental	active	The total number of denied registration updates that were sent with a reply code of 86H (Registration Denied - poorly formed request).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-violations	INT32	Incremental	active	The total number of security violations that occurred.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-badauth	INT32	Incremental	active	The total number of security violations that occurred due to a mis-computed authentication field.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-badid	INT32	Incremental	active	The total number of security violations that occurred due to the receipt of a Security Parameter Index (SPI) that is not configured on the PDSN.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-badspi	INT32	Incremental	active	The total number of security violations that occurred due to the receipt of a Security Parameter Index (SPI) that was in the reserved range (0 through 255).	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-mnhaauth	INT32	Incremental	active	The total number of security violations that occurred due to missing mobile node-home agent authentication extensions.	Not Defined	Per PDSN, per PF, per session	Standard
bcmcs	sec-regupdate	INT32	Incremental	active	The total number of security violations that occurred due to missing registration update authentication extensions	Not Defined	Per PDSN, per PF, per session	Standard

ipsg	vpnname	STRING	Primary-key	active	The name of the VPN associated with the interface.	Configuration	Per Context Level	Standard
ipsg	vpnid	INT32	Primary-key	active	The identification number of the context configured on the system that is currently facilitating the IPSG service. This is an internal reference number.	Generated During System Startup	Per Context Level	Standard
ipsg	servname	STRING	Primary-key	active	The name of the IPSG service for which these statistics are being displayed.	Configuration	Per IPSG Service	Standard
ipsg	servid	INT32	Primary-key	active	The identification number of the LCS service for which these statistics are being displayed. This is an internal reference number.	Generated During System Startup	Per IPSG Service	Standard
ipsg	total-start-req-rcv	INT32	Incremental	active	The total number of accounting start requests received by the IPSG service.	Increments when an accounting start message is sent from RADIUS client to IPSG.	Not Defined	Standard
ipsg	total-start-req-retrans-rcv	INT32	Incremental	active	The total number of accounting start request retransmissions received by the IPSG service.	Increments when a retransmitted Accounting-Start message is received. If Accounting-Start message comes again matching an established session with same IP address, Username+MSISDN, APN, NAS-IP-Address, Accounting-Session-ID, and Source-IP address of the IP packet, it is treated as retransmission.	Not Defined	Standard
ipsg	total-start-rsp-sent	INT32	Incremental	active	The total number of start responses sent by the IPSG service.	Increments when an accounting response is sent for Accounting-Start received by IPSG.	Not Defined	Standard
ipsg	total-interim-update-req-rcv	INT32	Incremental	active	The total number of interim update requests received by the IPSG service.	Increments when an interim message is received after call is up.	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
ipsg	total-stop-req-rcv	INT32	Incremental	active	The total number of stop requests received by the IPSG service.	Increments when an Accounting-Stop request is received.	Per IPSG Service	Standard
ipsg	total-unknown-req-rcv	INT32	Incremental	active	The total number of unknown requests received by the IPSG service.	Increments when an accounting message has unknown request. Valid RADIUS requests are Accounting-Start, Accounting-Interim, Accounting-Stop, Accounting-On, Accounting-Off, Access Request. For all other RADIUS messages unknown req will be updated. For eWAG, everything that is not expected to be processed is considered as unknown request. For example, disconnect, status, coa, any other accounting status type, accounting response.	Per IPSG Service	Standard
ipsg	total-rsp-sent	INT32	Incremental	active	The total number of responses sent by the IPSG service.	Increments with every response sent (auth response + accounting response + other messages).	Per IPSG Service	Standard
ipsg	total-discard-msgs-unknown-clnt	INT32	Incremental	active	The total number of messages discarded by IPSG since they were received from an unknown client.	Increments if in accounting messages the IP address does not match the current RADIUS client subscriber. RADIUS client subscribers are configured in IPSG service.	Per IPSG Service	Standard
ipsg	total-discard-msgs-ignore-interim	INT32	Incremental	active	The total number of RADIUS Accounting-Interim messages ignored by IPSG since they were received for non-existing sessions.	Increments on receiving RADIUS Accounting-Interim messages for non-existing session. If session creation based on Accounting-Interim is supported then this counter will never increment.	Per IPSG Service	Standard
ipsg	total-discard-msgs-partial-match-interim	INT32	Incremental	active	Total number of discarded packets with partial match of interim packet. This occurs when session creation with interim is enabled.	Triggers any time an interim packet is discarded due to a partial match.	Per IPSG Service	Standard
ipsg	total-discard-msgs-ignore-stop	INT32	Incremental	active	The total number of RADIUS Accounting-Stop messages ignored by IPSG since they were received for non-existing sessions.	Increments on receiving RADIUS Accounting-Stop messages for non-existing session.	Per IPSG Service	Standard
ipsg	total-discard-msgs-incorrect-secret	INT32	Incremental	active	The total number of messages discarded by IPSG due to an incorrect secret.	Increments on mismatch of shared secrets between RADIUS client/IPSG and IPSG/RADIUS server.	Per IPSG Service	Standard
ipsg	total-discard-msgs-attr-missing	INT32	Incremental	active	The total number of messages discarded by IPSG due to a missing attribute.	Increments if a RADIUS packet does not have the needed attributes.	Per IPSG Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
ipsg	rad-servaddr	STRING	Primary-key	active	IP address of the RADIUS server supporting the service.	Is updated when a RADIUS server is configured.	Not Defined	Standard
ipsg	rad-servport	INT32	Primary-key	active	Port number of the RADIUS server supporting the service.	Is updated when a RADIUS server is configured.	Per IPSG Service	Standard
ipsg	total_sessions_attempt	INT32	Incremental	active	The number of IPSG calls attempted on IPSG service.	Increments when an IPSG call arrives.	Per IPSG Service	Standard
ipsg	total_current_sessions	INT32	Gauge	active	The total number of IPSG calls currently active on IPSG service.	Increments when an IPSG call comes up. Decrements when an IPSG call ends.	Per IPSG Service	Standard
ipsg	total_sessions_setup	INT32	Incremental	active	The total number of calls setup on IPSG service.	Increments when an IPSG call is connected.	Per IPSG Service	Standard
ipsg	total_sessions_replaced	INT32	Incremental	active	The total number of calls replaced by IPSG service.	Increments when an IPSG call is replaced.	Per IPSG Service	Standard
ipsg	total_sessions_released	INT32	Incremental	active	The total number of IPSG calls released by IPSG service.	Increments when an IPSG call is released.	Per IPSG Service	Standard
ipsg	total_interim_update_rsp_sent	INT32	Incremental	active	The total number of interim update response sent by the IPSG service.	Increments when an accounting response is sent for interim request received.	Per IPSG Service	Standard
ipsg	total_stop_rsp_sent	INT32	Incremental	active	The total number of stop response sent by the IPSG service.	Increments when an Accounting-Response is sent for Accounting-Stop received.	Per IPSG Service	Standard
ipsg	total_stop_non-existing_rsp_sent	INT32	Incremental	active	The total number of stop response sent for non-existing sessions sent by the IPSG service.	Increments when an Accounting-Response for non-existing session is sent for Accounting-Stop received.	Per IPSG Service	Standard
ipsg	total_access_req_rcv	INT32	Incremental	active	The total number of Access-Requests received by the IPSG service. For eWAG service this will always be 0. If Access-Request is received it is discarded as service not supported.	Increments on receiving an Access-Request.	Per IPSG Service	Standard
ipsg	total_access_req_retrans_rcv	INT32	Incremental	active	The total number of Access-Request retransmissions received by the IPSG service. In case of EAP-AKA, EAP-SIM authentication multiple Access-Req are received from radius client. After the first Access-req , all next access requests are treated as retransmitted. For eWAG this will always be 0.	Increments when a retransmitted Access-Request message is received.	Per IPSG Service	Standard
ipsg	total_access_challenge_sent	INT32	Incremental	active	Total number of Access-Challenges sent by the IPSG service.	Increments when an Access-Challenge is sent.	Per IPSG Service	Standard
ipsg	total_access_accept_sent	INT32	Incremental	active	The total number of Access-Accept sent by the IPSG service. For eWAG this will always be 0.	Increments when an Access-Accept is sent.	Per IPSG Service	Standard
ipsg	total_access_reject_sent	INT32	Incremental	active	The total number of access reject sent by the IPSG service. For eWAG this will always be 0.	Increments when an Access-Reject is sent.	Per IPSG Service	Standard
ipsg	total_disconnect_msg_sent	INT32	Incremental	active	The total number of disconnect message sent by IPSG service.	Increments when a disconnect message is sent.	Per IPSG Service	Standard
ipsg	total_discarded	INT32	Incremental	active	The total number of IPSG calls rejected by IPSG service. It is the sum of all IPSG RADIUS message disconnect reasons.	Increments when an IPSG call is rejected.	Per IPSG Service	Standard
ipsg	total_discard_msgs_no_resource	INT32	Incremental	active	The total number of messages discarded by IPSG service due to no resource.	Increments when RADIUS message is discarded due to reasons including no resource, CPC failure, and invalid NAT scenarios.	Per IPSG Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
ipsg	total_discard_msgs_ignore_start	INT32	Incremental	active	The total number of RADIUS-Accounting-start messages ignored by IPSG since they were received for non-existing sessions. Applicable in IPSG RADIUS Proxy Mode where Access-Request will trigger session creation and then Accounting-Start is expected. Not applicable to eWAG service. For eWAG, it will always be 0.	Increments on receiving RADIUS Accounting-Start messages for non-existing session.	Per IPSG Service	Standard
ipsg	total_discard_msgs_partial_match_start	INT32	Incremental	active	The total number of discarded packets with partial match of start packet.	Increments any time a start packet is discarded due to a partial match.	Per IPSG Service	Standard
ipsg	total_acct_on_req_rcv	INT32	Incremental	active	The total number of accounting on messages received.	Increments when an Accounting on message is received.	Per IPSG Service	Standard
ipsg	total_acct_on_req_retrans_rcv	INT32	Incremental	active	The total number of accounting on RADIUS messages that are retransmitted.	Increments when a RADIUS message is retransmitted.	Per IPSG Service	Standard
ipsg	total_acct_on_rsp_sent	INT32	Incremental	active	The total number of Accounting on RADIUS response sent.	Increments when an Accounting on RADIUS response is sent.	Per IPSG Service	Standard
ipsg	total_acct_off_req_rcv	INT32	Incremental	active	The total number of Accounting off RADIUS messages received.	Increments when an Accounting off RADIUS message is received.	Per IPSG Service	Standard
ipsg	total_acct_off_req_retrans_rcv	INT32	Incremental	active	The total number of RADIUS Accounting off retransmitted messages received.	Increments when a RADIUS Accounting off retransmitted message is received.	Per IPSG Service	Standard
ipsg	total_acct_off_rsp_sent	INT32	Incremental	active	The total number of RADIUS accounting off responses sent.	Increments when a RADIUS accounting off response is sent.	Per IPSG Service	Standard
ipsg	total_discard_msgs_stale_packets	INT32	Incremental	active	The total number of messages discarded by IPSG as they are stale.	Increments when a stale packet is received (event timestamp mismatch).	Per IPSG Service	Standard
ipsg	total_discard_msgs_svc_not_supported	INT32	Incremental	active	The total number of messages discarded by IPSG if service is not supported.	Increments when Access-Request is received for non RADIUS Proxy Mode. For example, if Access-Request is received eWAG mode will increment svc-not-supported.	Per IPSG Service	Standard
ipsg	total_discard_msgs_internal_error	INT32	Incremental	active	The total number of messages discarded by IPSG due to internal errors. For example, when Demux fails to send notification to SessMgr. Unexpected internal scenarios.	Increments when RADIUS message is discarded due to an internal error.	Per IPSG Service	Standard
ipsg	total_discard_msgs_svc_limit_exceeded	INT32	Incremental	active	The total number of messages discarded by IPSG due to service limit for maximum sessions being exceeded.	Increments on receiving RADIUS message that triggers new session creation and service limit for maximum sessions is exceeded.	Per IPSG Service	Standard
ipsg	total_discard_msgs_license_limit_exceeded	INT32	Incremental	active	The total number of messages discarded by IPSG due to license limit being exceeded.	Increments on receiving RADIUS message that triggers new session creation and license limit is exceeded.	Per IPSG Service	Standard
ipsg	total_discard_msgs_congestion_policy_applied	INT32	Incremental	active	The total number of messages discarded by IPSG due to congestion policy.	Increments on receiving RADIUS message that triggers new session creation and congestion policy is applied.	Per IPSG Service	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
ipsg	total_dhcp_discard_msgs	INT32	Incremental	active	Total number of DHCP messages discarded by the IPSG service. It is the sum of all DHCP discard reasons. (It does not include parse error or format error as those stats are maintained by the DHCP module.)	Increments when DHCP message is discarded.	Per IPSG Service	Standard
ipsg	total_dhcp_discard_msgs_exceed_max_size	INT32	Incremental	active	Total number of DHCP messages discarded by the IPSG service due to maximum size exceeding. Maximum DHCP message size supported by IPSG service is (DHCP_MESSAGE_MAX_SIZE 1000 + UDP_HEADER_LEN 8 + IP_HEADER_LEN 20).	Increments when DHCP message is discarded due to maximum size exceeding.	Per IPSG Service	Standard
ipsg	total_dhcp_discard_msgs_non_existing_session	INT32	Incremental	active	Total number of DHCP messages ignored by IPSG since they were received for non-existing sessions.	Increments on receiving DHCP messages for non-existing session.	Per IPSG Service	Standard
ipsg	total_dhcp_discard_msgs_giaddr_mismatch	INT32	Incremental	active	Total number of DHCP messages discarded by IPSG due to GiAddr field (Relay agent addr) not matching IP in DHCP message.	Increments on receiving RADIUS massage that triggers new session creation, and congestion policy is applied.	Per IPSG Service	Standard
ipsg	total_dhcp_discard_msgs_hw_type_len_unsupported	INT32	Incremental	active	Total number of messages discarded by IPSG due to congestion policy.	Increments on receiving RADIUS message that triggers new session creation, and congestion policy is applied.	Per IPSG Service	Standard
dcca-group	acs-service	STRING	Primary-key	active	Name of the active charging service	Not Applicable	Not Defined	Standard
dcca-group	cc-group	STRING	Primary-key	active	Name of the credit control group.	Not Applicable	Not Defined	Standard
dcca-group	cc-cursess	INT64	Gauge	active	The total number of Credit Control Application (CCA) sessions currently active.	Increments when a Gy session is successfully created Decrements when the Gy session is terminated	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-ttlecsadd	INT64	Incremental	active	The total number of ECS sessions added to CCA.	Increments when a new CC session is being created by ECS.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-ttlstart	INT64	Incremental	active	The total number of CCA sessions started. The CCR-I/CCA-I message exchange occurs when a new session is established.	Increments when CCR-I is successfully sent.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-ttlsessupd	INT64	Incremental	active	The total number of CCA sessions updated.	Increments when a CC session update is sent by ECS to DCCA module.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-ttlterm	INT64	Incremental	active	The total number of CCA sessions terminated.	Increments when a CC session terminate is sent by ECS to DCCA module.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-sessfailover	INT64	Incremental	active	The total number of CCA sessions failed.	Increments when a CC session message is retried on a secondary server due to session failover.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-recv	INT64	Incremental	active	The total number of CCA messages received.	Increments when a CCA message is successfully received	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-sent	INT64	Incremental	active	The total number of CCA messages sent.	Increments when a CCA message is successfully sent to the server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-request	INT64	Incremental	active	The total number of CCR messages that are sent out from the system to the Diameter Server. The CCR can be Initial/Update or Terminate.	Increments when CCR message is sent out from system to the Diameter Server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-answer	INT64	Incremental	active	The total number of CCA messages that are received by the system from the Diameter Server.	Increments when CCA message is received	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccrinit	INT64	Incremental	active	The total number of CCR-Initial messages that are sent out from the system to the Diameter Server. The Credit-Control-Request/Answer-Initial (CCR-I/CCA-I) message exchange occurs when a new session is established.	Increments when CCR-I message is successfully sent	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-msg-ccainit	INT64	Incremental	active	The total number of CCA-Initial messages that are received by the system from the Diameter Server.	Increments when CCA-I message is successfully received	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccainitaccept	INT64	Incremental	active	The total number of CCA-Initial messages that are sent from Diameter Server and accepted by the system	Increments when a CCA-Initial message from Diameter Server is accepted by the system	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccainitreject	INT64	Incremental	active	The total number of CCA-Initial messages that are sent from Diameter Server and rejected by the system. Receiving Error Result-Code in CCAI would be treated as rejection.	Increments when a CCA-Initial message from Diameter Server is rejected by system	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccainittimeout	INT64	Incremental	active	The total number of CCA-Initial Timeout (CCR-I sent but did not receive CCA till the timer expired) messages that are sent to the system from Diameter Server.	Increments when CCR-I is sent but CCA-I is not received till Tx timer expiry.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccrupdate	INT64	Incremental	active	The total number of CCR-Update messages that are sent out from the system to the Diameter Server.	Increments whenever a CCR-Update request is successfully sent from the system.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccaupdate	INT64	Incremental	active	The total number of CCA-Update messages that are received by the system from the Diameter Server.	Increments whenever an update answer message is received from the server.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccaupdatetimeout	INT64	Incremental	active	This indicates the total number of CCR-Update Timeouts (CCR-U sent but did not receive CCA till the timer expired.	Increments when Tx timer expires for a CCR-U sent, without CCA-Update response.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-msg-ccrfinal	INT64	Incremental	active	The total number of CCR-Final messages that are sent out from the system to the Diameter Server. The CCR/CCA-Terminate message exchange occurs when stopping the Credit-Control-Session.	Increments whenever a CCR-Terminate request for a session is successfully sent from the system	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccafinal	INT64	Incremental	active	The total number of CCA-Final messages that are received by the system from Diameter Server.	Increments when the system receives answer message (CCA-T) for Terminate request that was sent	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-ccafinaltimeout	INT64	Incremental	active	The total number of CCA-Final Timeouts (CCR-T sent but did not receive CCA till the timer expired) happened.	Increments when Tx timer expires for a CCR-T sent, without CCA-T response.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-asr	INT64	Incremental	active	The total number of Abort Session Request (ASR) messages that are sent from the Diameter Server to the system. ASR message is used when the Server needs to trigger the graceful termination of the session.	Increments when the system receives an ASR message	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-asa	INT64	Incremental	active	The total number of Abort Session Answer (ASA) messages sent from the system to the Diameter server. This message will be followed by a CCR-Terminate to terminate the session.	Increments when the system replies with an ASA message for the Abort Session Request (ASR) message received from Diameter Server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-rar	INT64	Incremental	active	The total number of Re-Authorization Request (RAR) messages that are received from the Diameter Server to the system. This RAR message is sent by the Server to the Client to request that the user be Re-Authorized or Re-Authenticated.	Increments when a RAR message is received from Diameter Server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msg-raa	INT64	Incremental	active	The total number of Re-Authorization Answer (RAA) messages sent from the system to the Diameter server. This message is followed by a CCR-Update to update the Diameter server about the session.	Increments when the system replies with a RAA message for the RAR received from Diameter Server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-msg-ccadropped	INT64	Incremental	active	The total number of CCA messages dropped by the system. This happens when a Credit-Control-Answer message is received but there is no matching Requests pending.	Increments when the system drops/ignores a CCA message received from the server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-proto	INT64	Incremental	active	The total message errors due to Diameter protocol.	Increments whenever a message with result-codes 3xxx- errors due to Diameter protocol is received from the server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-badanswer	INT64	Incremental	active	This indicates the total CCA messages received which the system couldn't process due to Parsing-Errors. Could be due to an Unknown mandatory AVP received in the response.	Increments when the system receives an undefined mandatory AVP from the server	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-unknownsess	INT64	Incremental	active	The total message errors due to invalid session requests. This can happen when RAR/ASR requests are sent by Server, for Session-IDs that are no longer present in the System.	Increments for every occurrence of invalid session request message	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-unknowncomm	INT64	Incremental	active	The total message errors due to invalid/unknown command code (any commands other than CCA, ASR, RAR).	Increments whenever a response is received for a valid request with corrupted Command Code.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-reqtimeout	INT64	Incremental	active	This shows the total message errors due to request timeout.	Increments whenever a request message is timed-out	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-parse	INT64	Incremental	active	The total message errors due to parsing errors. When an unknown AVP with M flag set, is received it is considered as parse-error.	Increments whenever a message is received with parsing errors	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-msgerr-unkratinggrp	INT64	Incremental	active	The total message errors due to invalid/unknown Rating Groups. Rating group is used to identify a particular type of traffic.	Increments when Unknown Rating-Group is preemptively received from server or a preemptive MSCC is received after session abortion	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-unkrulebase	INT64	Incremental	active	The total message errors due to invalid/unknown Rulebase applied.	Increments when rulebase change is attempted and the system is not able to switch to this because the plan indicated might be unknown/invalid.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-unkfailure	INT64	Incremental	active	The total number of unknown server-provided session failover actions.	Increments when an unknown CCFH action is received from the server (terminate/continue/retry and terminate are considered to be valid CCFH values)	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-msgerr-transfailure	INT64	Incremental	active	The total number of errors resulting from requests that could not be satisfied at the time they were received. The requests may be satisfied in the future.	Increments when CCA messages have been received with a Diameter Result-Code=4XXX.	Per Credit Control Group	Standard
dcca-group	cc-msgerr-permfailure	INT64	Incremental	active	The total number of errors resulting from requests that can never be satisfied.	Increments when CCA messages have been received with a Diameter Result-Code=5XXX.	Per Credit Control Group	Standard
dcca-group	cc-upd-threshold	INT64	Incremental	active	For each Rating group, the Diameter server sends a threshold (this is also configurable in the system) after which an update needs to be sent. For example, a subscriber quota of 1000 bytes with 900 as a threshold is sent to CCA. When 900 bytes have been used by the system, an update message is sent for quota. This counter gives the number of updates sent because of the threshold.	Increments whenever threshold value for a quota-type is reached, for any rating-group and an update request is sent to the server to report the usage.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-qht	INT64	Incremental	active	The total number of updates sent due to expiry of Quota Hold Timer (QHT). Quota-Hold-Time indicates the duration for which the allocated Quota can be retained without traffic. Whenever a packet/traffic is received, Quota-Hold-Timer will be restarted.	Increments when updates are sent due to QHT expiry	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-final	INT64	Incremental	active	The total number of updates sent due to exhaustion/invalidation/service denial.	Increments when updates are sent due to quota exhaustion/invalidation/service denial.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-upd-quotaexhaust	INT64	Incremental	active	The total number of updates sent due to exhaustion of subscriber quota.	Increments when updates are sent because the quota for a particular rating-group is exhausted	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-validitytime	INT64	Incremental	active	The total number of updates sent due to expiry of the session validity time.	Increments when updates are sent due to validity time expiry for a rating-group	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-otherquota	INT64	Incremental	active	The total number of updates sent to report the usage of one quota type, while the other quota reached a trigger condition.	Increments when updates are sent to report the usage of one quota type, while the other quota reached a trigger condition	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-ratingchange	INT64	Incremental	active	The total number of updates sent due to changes in Radio Access Technology (RAT)/Quality of Service (QoS)/SGSN/CELLID/Location Area Code (LAC).	Increments when updates are sent due to changes in RAT/QoS/SGSN/CELLID/LAC	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-forcedreauth	INT64	Incremental	active	The total number of updates sent because of Re-Authorization-Request (RAR). When a RAR is received from Server, the Client is supposed to Re-Authorize the traffic-categories (MSCCs). And this Re-Authorization is done by sending CCR-Updates.	Increments when the server asks for forced-reauthorization of the subscriber and sends the update request	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-upd-titsutime	INT64	Incremental	active	The total number of updates sent due to time interval after tariff switch. This is specific to WiMAX prepaid customers.	Increments when updates are sent due to time interval after tariff switch	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-diamlogout	INT64	Incremental	active	The total number of CCA sessions terminated due to subscriber logout.	Increments when a subscriber initiates termination of a Diameter session	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-term-servnotprov	INT64	Incremental	active	The total number of CCA sessions terminated due to unavailability of service.	Increments when a session is terminated due to unavailability of Diameter service	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-badanswer	INT64	Incremental	active	The total number of CCA sessions terminated due to invalid/unknown response received. On receiving a diameter-message with unknown-application-code, this counter gets incremented.	Increments when a session is terminated due to invalid/unknown/unsuccessful response received	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-admin	INT64	Incremental	active	The total number of CCA sessions terminated by an administrative user.	Increments when a session termination is done by the system - administrative decision taken by our system in relevant scenarios	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-linkbroken	INT64	Incremental	active	The total number of CCA sessions terminated due to broken uplink/downlink (connection between peers).	Increments when a session is terminated because the connection between peers is lost - Diameter link is broken.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-authexpired	INT64	Incremental	active	The total number of CCA sessions terminated due to expiry of subscriber authorization.	Increments when an update is sent to check for the expiry of lifetime authorization of the subscriber and the session gets terminated if the server indicates expiry of authorization.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-usermoved	INT64	Incremental	active	The total number of CCA sessions terminated as subscriber moved out of the service area.	Increments when session termination occurs because the subscriber has moved out of the service area.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-term-sesstimeout	INT64	Incremental	active	The total number of CCA sessions terminated due to timeout.	Increments when a session terminates because the session manager has indicated a session-timeout.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-badans-auth-appid	INT64	Incremental	active	The absence or unexpected value in Auth-Application-Id AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of Auth-Application-Id AVP.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-sessid	INT64	Incremental	active	The absence or unexpected value in Session-Id AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of Session-id AVP	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-cc-req-num	INT64	Incremental	active	The absence or unexpected value in CC-Request-Number AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of CC-Request-Number AVP	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-cc-req-type	INT64	Incremental	active	The absence or unexpected value in CC-Request-Type AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of CC-Request-Type AVP	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-origin-host	INT64	Incremental	active	The absence of Origin-Host AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of Origin-Host AVP	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-origin-realm	INT64	Incremental	active	The absence of Origin-Realm AVP.	Increments when a session is terminated because of Diameter bad answer due to absence or unexpected value of Origin-Realm AVP	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-parsemsg-err	INT64	Incremental	active	The number of parse-errors in the message.	Increments when a session is terminated because of Diameter bad answer due to parsing errors in the message	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-badans-parsemscc-err	INT64	Incremental	active	The number of parse errors in MSCC AVP.	Increments when a session is terminated because of Diameter bad answer due to parsing errors detected while processing the Multiple-Services-Credit-Control (MSCC) AVP in the message	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-badans-misc-err	INT64	Incremental	active	The number of other miscellaneous errors.	Increments when a session is terminated because of Diameter bad answer due to miscellaneous reasons like failure installing the rulebase change/bandwidth/firewall policy, etc.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-catcreate	INT64	Incremental	active	The total traffic categories (MSCC) created.	Increments when a new MSCC is created.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-catdelete	INT64	Incremental	active	The total number of traffic categories (MSCC) deleted.	Increments whenever an MSCC is deleted in an ongoing session.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-catlookup	INT64	Incremental	active	The total number of traffic categories/MSCC lookups failed.	Increments when a lookup operation is performed in the list of MSCCs.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-hits	INT64	Incremental	active	The total number of traffic categories/MSCC lookups successful.	Increments when a lookup of MSCC is successful	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-misses	INT64	Incremental	active	The total number of traffic categories triggered/MSCC lookups failed.	Increments when a lookup operation for a particular MSCC fails.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-traf-triggerevent	INT64	Incremental	active	The total number of triggers for traffic categories/MSCCs.	Increments whenever there is a change in certain trigger parameters like RAT, SGSN-IP-ADDRESS, QOS, CELLID, etc.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-finalunit	INT64	Incremental	active	The total final-units-actions taken on MSCCs.	Increments whenever FUI action is imposed on a particular rating group.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-catsuccess	INT64	Incremental	active	The total number of successful allocation of credits for traffic category/MSCC (result-code 2001).	Increments when the server responds with result-code 2001 indicating successful allocation of credits for traffic category	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-ratingfail	INT64	Incremental	active	The total number of quota retries because of rating failure due to category not recognized (result-code 5031).	Increments when the server responds with result-code 5031 indicating rating failure due to category not recognized	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-servdenied	INT64	Incremental	active	The total number of quota retries due to denial of end user service (result-code 4010).	Increments when the server responds with result-code 4010 indicating end user service denial.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-limitreached	INT64	Incremental	active	The total number of retries due to credit limit reached (result-code 4012).	Increments when the server responds with result-code 4012 indicating that the credit limit has reached	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-traf-authreject	INT64	Incremental	active	The total number of retries due to authorization rejected (result-code 5003).	Increments when the server responds with result-code 5003 indicating authorization rejection.	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-traf-othererror	INT64	Incremental	active	The total number of miscellaneous/unknown errors not specified by the system (Diameter_unable_to_comply [result-code 5012]).	Increments when the server responds with result-code 5012 indicating miscellaneous/unknown errors not specified by the system	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-2001-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=2001 at command level.	Increments when a CCA-I is received with Result-Code=2001	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-5003-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=5003 at command level.	Increments when a CCA-I is received with Result-Code=5003	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-4010-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=4010 at command level.	Increments when a CCA-I is received with Result-Code=4010	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-4011-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=4011 at command level.	Increments when a CCA-I is received with Result-Code=4011	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-4012-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=4012 at command level.	Increments when a CCA-I is received with Result-Code=4012	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-5031-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=5031 at command level.	Increments when a CCA-I is received with Result-Code=5031	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-init-exp-5199-rc	INT64	Incremental	active	The total number of CCA-I messages received with a Diameter Result-Code=5199 (DIAMETER_NEWER_SESSION_DETECTED) at command level. This result code is introduced in Release 19 to maintain session uniqueness and avoid stale message processing.	Increments when a CCA-I is received with Result-Code=5199	Per Credit Control Group	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cca-updt-2001-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=2001 at command level.	Increments when a CCA-U is received with Result-Code=2001	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-updt-5003-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=5003 at command level.	Increments when a CCA-U is received with Result-Code=5003	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-updt-4010-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=4010 at command level.	Increments when a CCA-U is received with Result-Code=4010	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-updt-4011-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=4011 at command level.	Increments when a CCA-U is received with Result-Code=4011	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-updt-4012-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=4012 at command level.	Increments when a CCA-U is received with Result-Code=4012	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-updt-5031-rc	INT64	Incremental	active	The total number of CCA-U messages received with a Diameter Result-Code=5031 at command level.	Increments when a CCA-U is received with Result-Code=5031	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	fail-action-term	INT64	Incremental	active	This variable indicates how many times the DCCA failure handling with action terminate has been invoked in each measurement interval.	Increments when a call is terminated as a result of failure handling actions	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	fail-action-contd	INT64	Incremental	active	This variable indicates how many times the DCCA failure handling with action continue has been invoked in each measurement interval.	Increments when a call is continued as a result of failure handling actions	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	mscc-gsu-null-grant	INT64	Incremental	active	This variable indicates the total number of GSUs with zero grant.	Increments when a zero grant is detected under GSU	Per Credit Control Group	Standard
dcca-group	mscc-fui-redirect	INT64	Incremental	active	This variable indicates the total number of redirections received from OCS.	Increments when a redirection is received from OCS server	Per Credit Control Group	Standard
dcca-group	offline-active-sess	INT64	Gauge	active	The current number of active data sessions that are converted from online to offline charging due to DCCA failure handling	Increments when a call is converted from online to offline Decrements when a offline call is cleared or terminated	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-2xxx-rc	INT64	Incremental	active	Total number of CCA Result-Codes that are received in range of 2000 and 2999 at command level.	Increments when a CCA Result-Code is received in range of 2000 and 2999	Per Credit Control Group	Standard
dcca-group	cca-2001-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=2001 at command level.	Increments when a CCA is received with Result Code=2001	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-2002-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=2002 at command level.	Increments when a CCA is received with Result Code=2002	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-4001-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=4001 at command level.	Increments when a CCA is received with Result Code=4001	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-4002-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=4002 at command level.	Increments when a CCA is received with Result Code=4002	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cca-4010-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=4010 at command level.	Increments when a CCA is received with Result Code=4010	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-4011-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=4011 at command level.	Increments when a CCA is received with Result Code=4011	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-4012-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=4012 at command level.	Increments when a CCA is received with Result Code=4012	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5001-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5001 at command level.	Increments when a CCA is received with Result Code=5001	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5002-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5002 at command level.	Increments when a CCA is received with Result Code=5002	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5003-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5003 at command level.	Increments when a CCA is received with Result Code=5003	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5004-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5004 at command level.	Increments when a CCA is received with Result Code=5004	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cca-5005-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5005 at command level.	Increments when a CCA is received with Result Code=5005	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5006-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5006 at command level.	Increments when a CCA is received with Result Code=5006	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-5031-rc	INT64	Incremental	active	Total number of CCA messages received with a Diameter Result-Code=5031 at command level.	Increments when a CCA is received with Result Code=5031	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cca-other-rc	INT64	Incremental	active	Total number of CCA messages received with all other Diameter Result-Codes.	Increments when a CCA is received with all other result codes	Per Credit Control Group NOTE: In StarOS 14.0 releases after August 2012, this variable has been moved to the DCCA-Group schema.	Standard
dcca-group	cc-ocs-unreachable-txexpiry	INT64	Incremental	active	Total number of tx-expiry happened in case of OCS unreachable. Assume-Positive feature is to specify what to do with the user-traffic when the Online-Charging-Server (OCS) becomes unreachable. Assume-Positive configuration allows to specify how much quota can be used while the service is unavailable, and how many retries should be done.	Increments when a Tx expiry occurs in the event of OCS being unreachable	Per Credit Control Group	Standard
dcca-group	cc-ocs-unreachable-rsp-timeout	INT64	Incremental	active	Total number of response-timeouts happened in case of OCS unreachable.	Increments when a response-timeout is received when the OCS is unreachable	Per Credit Control Group	Standard
dcca-group	cc-ocs-unreachable-conn-fail	INT64	Incremental	active	Total number of times the TCP connection is down when the OCS is unreachable.	Increments whenever the TCP connection is down when OCS is in unreachable state	Per Credit Control Group	Standard
dcca-group	cc-ocs-unreachable-server-retry	INT64	Incremental	active	Total number of times the Server-Retries are performed when OCS is unreachable.	Increments whenever a server-retry is performed when the OCS is unreachable	Per Credit Control Group	Standard
dcca-group	cc-ocs-unreachable-action-cont	INT64	Incremental	active	Total number of times the action continue was applied due to OCS unreachable.	Increments when the action continue is applied in OCS unreachable state	Per Credit Control Group	Standard
dcca-group	cc-ocs-unreachable-action-term	INT64	Incremental	active	Total number of times the action terminate was applied due to OCS unreachable.	Increments when the action terminate is applied in OCS unreachable state	Per Credit Control Group	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
dcca-group	cc-assume-pos-curr-sess	INT64	Gauge	active	The current number of sessions in Assume-Positive state.	Increments whenever a session goes in assume positive state, also decrements whenever a session comes out of Assume Positive state.	Per Credit Control Group	Standard
dcca-group	cc-assume-pos-cumlt-sess	INT64	Incremental	active	Cumulative number of sessions that went into Assume-Positive state.	Increments whenever the cumulative of current sessions is in Assume-Positive state	Per Credit Control Group	Standard
dcca-group	cc-ccr-event	INT64	Incremental	active	Cumulative number of CCR-Event messages that have been sent.	Increments when a CCR-Event message is sent	Per Credit Control Group	Standard
dcca-group	cc-cca-event	INT64	Incremental	active	Cumulative number of CCA-Event messages that have been received.	Increments when a CCA-Event message is received	Per Credit Control Group	Standard
dcca-group	cc-cca-event-timeout	INT64	Incremental	active	Cumulative number of CCA-Event messages that are timed out. Timeout happens when CCR-Event request is sent but there was no response (CCA-E) for this, and timer expired.	Increments when a CCA-Event message times out	Per Credit Control Group	Standard
dcca-group	cc-ccr-event-retry	INT64	Incremental	active	Cumulative number of CCR-Event messages retried. After the Response Timeout, if there are any other active peers available the message will be retried.	Increments when the CCR-Event message is retried	Not Defined	Standard
dcca-group	cca-event-2001-rc	INT64	Incremental	active	Cumulative number of CCA-Event messages that have been received with result code 2001.	Increments when a CCA-Event message with result code 2001 is received	Per Credit Control Group	Standard
dcca-group	cca-event-other-rc	INT64	Incremental	active	Cumulative number of CCA-Event messages that have been received with result code other than 2001.	Increments when a CCA-Event message with result code other than 2001 is received	Per Credit Control Group	Standard
dcca-group	ccrevent-backpressure	INT64	Incremental	active	This variable indicates the number of times backpressure got hit while creating a CCR Event message. Backpressure feature manages the outstanding requests for one peer, and this counter indicates how many times the sending of CCRE messages are affected by this Backpressure limit.	Increments when backpressure is hit while creating a CCR-E message	Per Credit Control Group	Standard
dcca-group	ccri-bp-stats	INT64	Incremental	active	This variable indicates the number of times backpressure got hit while creating a CCR-I message.	Increments when backpressure is hit while creating a CCR-I message	Per Credit Control Group	Standard
dcca-group	ccru-bp-stats	INT64	Incremental	active	This variable indicates the number of times backpressure got hit while creating a CCR-U message.	Increments when backpressure is hit while creating a CCR-U message	Per Credit Control Group	Standard
dcca-group	ccrt-bp-stats	INT64	Incremental	active	This variable indicates the number of times backpressure got hit while creating a CCR-T message.	Increments when backpressure is hit while creating a CCR-T message	Per Credit Control Group	Standard
dcca-group	cc-msg-ccrt-hdd	INT64	Incremental	active	This variable indicates the total count of CCR-T records that are stored in the Hard-Disk-Drive.	Increments when the session is terminated and the failed CCR-Ts are written in HDD.	Per Credit-COntrol-Group	Standard
rlf	rlf-ctx-name	STRING	Primary-key	active	Has the RLF context name	Triggered when a valid RLF template is configured and is bound to an open peer	Not Defined	Standard
rlf	rlf-template-name	STRING	Primary-key	active	Has the RLF template name	Triggered when a valid RLF template is configured	Not Defined	Standard
rlf	rlf-cfg-tps	INT32	Primary-key	active	Has the configured RLF tps	Triggered when TPS is set for a RLF template	Not Defined	Standard
rlf	rlf-state	STRING	Primary-key	active	Has the current RLF state	Triggered when RLF context is created for an open peer	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
rlf	rlf-storage	STRING	Primary-key	active	Has the RLF storage type	Triggered when RLF context is created for an open peer	Not Defined	Standard
rlf	rlf-direction	STRING	Primary-key	active	Has the direction in which messages reach RLF (inbound/outbound peer)	Triggered when RLF context is created for an open peer	Not Defined	Standard
rlf	rlf-tot-active-time	INT32	Incremental	active	Measures the total time in sec, since the first message reached RLF and RLF became active	Triggered when a message reaches RLF	Per RLF context	Standard
rlf	rlf-curr-queue-size	INT32	Gauge	active	Measures the number of messages currently in the RLF queue	Triggered when a message is queued in RLF	Per RLF context	Standard
rlf	rlf-avg-tps	INT32	Gauge	active	Measures the average TPS in which messages flow through RLF	Triggered when the average TPS in which messages flow through RLF changes	Per RLF context	Standard
rlf	rlf-trend-tps	INT32	Gauge	active	Measures the trend TPS of messages flowing through RLF	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-10sec-avg-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 10 seconds	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-30sec-avg-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 20 seconds	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-60sec-avg-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 60 seconds	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-5min-avg-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 5 minutes	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-10min-avg-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 10 minutes	Triggered when there is change in number of messages flowing through RLF	Per RLF context	Standard
rlf	rlf-avg-bypass-tps	INT32	Gauge	active	Measures the average TPS, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard
rlf	rlf-10sec-avg-bypass-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 10 seconds, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard
rlf	rlf-30sec-avg-bypass-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 30 seconds, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard
rlf	rlf-60sec-avg-bypass-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 60 seconds, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard
rlf	rlf-5min-avg-bypass-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 5 minutes, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard
rlf	rlf-10min-avg-bypass-tps	INT32	Gauge	active	Measures the average RLF TPS for the last 10 minutes, when RLF has been bypassed using hidden CLI (rlf-bypass diamproxy)	Triggered when RLF has been bypassed and messages are pumped out	Per RLF context	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
rlf	rlf-threshold-exceeded	INT32	Incremental	active	Measures the number of times the RLF threshold has been exceeded	Triggered when number of messages in the RLF queue exceeds the thresholds	Per RLF context	Standard
rlf	rlf-queued	INT32	Incremental	active	Measures the number of times messages were queued in RLF	Triggered when a message is queued in RLF	Per RLF context	Standard
rlf	rlf-dropped	INT32	Incremental	active	Measures the number of times messages were dropped, as the RLF queue was full	Triggered when a message is dropped from RLF (RLF queue full)	Per RLF context	Standard
rlf	rlf-directly-sent	INT32	Incremental	active	Measures the number of times a message was directly sent out without queueing	Triggered when a message is directly sent out of RLF	Per RLF context	Standard
rlf	rlf-queue-bypassed	INT32	Incremental	active	Measures the number of messages that reached RLF, when it was in bypass	Triggered when RLF is configured to be bypassed and a message reaches RLF	Per RLF context	Standard
rlf	rlf-send-msg-cb-failed	INT32	Incremental	active	Measures the number of times messenger failed to call the callback, after sending out the message from RLF	Triggered when it fails to call the send message callback	Per RLF context	Standard
rlf	rlf-status-update-cb-failed	INT32	Incremental	active	Measures the number of times messenger failed to call the status update callback	Triggered when it fails to call the status update callback	Per RLF context	Standard
rlf-detailed	rlf-ctx-name	STRING	Primary-key	active	Has the RLF context name	Triggered when a valid RLF template is configured and is bound to an open peer	Not Defined	Standard
rlf-detailed	rlf-template-name	STRING	Primary-key	active	Has the RLF template name	Triggered when a valid RLF template is configured	Not Defined	Standard
rlf-detailed	rlf-instance-num	INT32	Primary-key	active	The RLF facility's instance from which detailed stats have been fetched	Triggered when a valid RLF template is configured and is bound to an open peer	Per instance: Per RLF context	Standard
rlf-detailed	rlf-cfg-tps	INT32	Primary-key	active	Has the configured RLF tps	Triggered when TPS is set for a RLF template	Per instance: Per RLF context	Standard
rlf-detailed	rlf-state	STRING	Primary-key	active	Has the current RLF state	Triggered when RLF context is created for an open peer	Not Defined	Standard
rlf-detailed	rlf-curr-queue-size	INT32	Gauge	active	Measures the number of messages currently in the RLF queue	Triggered when a message is queued in RLF	Per instance: Per RLF context	Standard
rlf-detailed	rlf-avg-tps	INT32	Gauge	active	Measures the average TPS in which messages flow through RLF	Triggered when the average TPS in which messages flow through RLF changes	Per instance: Per RLF context	Standard
rlf-detailed	rlf-trend-tps	INT32	Gauge	active	Measures the trend TPS of messages flowing through RLF	Triggered when there is change in number of messages flowing through RLF	Per instance: Per RLF context	Standard
rlf-detailed	rlf-min-achieved-tps	INT32	Gauge	active	Measures the minimum achieved TPS for a particular RLF instance	Triggered when there is change in number of messages flowing through RLF	Per instance: Per RLF context	Standard
rlf-detailed	rlf-max-achieved-tps	INT32	Gauge	active	Measures the maximum achieved TPS for a particular RLF instance	Triggered when there is change in number of messages flowing through RLF	Per instance: Per RLF context	Standard
diameter-tps	diameter-tps-application-id	INT32	Primary-key	active	Indicates the Application ID exchanged in CER/CEA. This statistic is introduced in conjunction with the Diameter Transaction Rate KPI feature.	Not Applicable	App-ID	Standard
diameter-tps	diameter-tps-application-name	STRING	Primary-key	active	Indicates the name of specific Diameter application - Gx, Gy, S6b, STa, S6a, Rf, SWm. This statistic is introduced in conjunction with the Diameter Transaction Rate KPI feature.	Not Applicable	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
diameter-tps	diameter-tps-value	INT32	Gauge	active	Indicates the two minutes average Diameter Transactions per Second (TPS). TPS is computed based on average of sent and received Diameter messages per second. This statistic is introduced in conjunction with the Diameter Transaction Rate KPI feature.	Any Diameter messages sent to or received from the supported applications.	TPS	Standard
diameter	endpoint-name	STRING	Primary-key	active	This is the Diameter endpoint name.	Not Applicable	Not Defined	Standard
diameter	conn-disconnects	INT64	Incremental	active	Measures the number of Diameter connection disconnects	Increments when a Diameter connection disconnects	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-closes	INT64	Incremental	active	Measures the number of closed Diameter connections	Increments when a Diameter connection is closed	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-dhost-requests	INT64	Incremental	active	Measures the number of Diameter dhost requests	Increments when a Diameter dhost connection is requested	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-dhost-removes	INT64	Incremental	active	Measures the number of Diameter dhost removes	Increments when a Diameter dhost connection is removed	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-timeouts	INT64	Incremental	active	Measures the number of Diameter connection timeouts	Increments when a Diameter connection times out	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-binderr	INT64	Incremental	active	Measures the number of Diameter connection bind errors	Increments when a Diameter connection fails due to bind error	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-connecterr	INT64	Incremental	active	Measures the number of Diameter connection errors	Increments when a Diameter connection fails due to connect error	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-addresserr	INT64	Incremental	active	Measures the number of Diameter connection address errors	Increments when a Diameter connection fails due to address error	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-dhosterr	INT64	Incremental	active	Measures the number of Diameter connection dhost errors	Increments when a Diameter connection fails due to dhost error	Per Diameter endpoint/Diamproxy level	Standard
diameter	cer-senderr	INT64	Incremental	active	Measures the number of capability exchange messages send errors	Increments when a CER message failed due to an error	Per Diameter endpoint/Diamproxy level	Standard
diameter	cer-received	INT64	Incremental	active	Measures the number of capability exchange request messages received	Increments when a capability exchange request message is received	Per Diameter endpoint/Diamproxy level	Standard
diameter	cer-createfail	INT64	Incremental	active	Measures the number of capability exchange request message create failures	Increments when a capability exchange request message creation fails	Per Diameter endpoint/Diamproxy level	Standard
diameter	cea-received	INT64	Incremental	active	Measures the number of capability exchange answers received	Increments when a capability exchange answer is received	Per Diameter endpoint/Diamproxy level	Standard
diameter	cea-avpunknown	INT64	Incremental	active	Measures the number of CEAs received with unknown AVPs	Increments when a CEA is received with unknown AVPs	Per Diameter endpoint/Diamproxy level	Standard
diameter	cea-appid-mismatch	INT64	Incremental	active	Measures the number of CEAs received with application ID mismatch	Increments when a CEA is received with application ID mismatch	Per Diameter endpoint/Diamproxy level	Standard
diameter	cea-twexpiry	INT64	Incremental	active	Measures the number of CEA Tw watch dog timer expiries	Increments when a CEA Tw watch dog timer expires	Per Diameter endpoint/Diamproxy level	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
diameter	cea-negotiation-fail	INT64	Incremental	active	Measures the number of CEA Negotiation failures	Increments when a CEA Negotiation fails	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwa-attempts	INT64	Incremental	active	Measures the number of Device Watch dog Answer (DWA) message attempts	Increments when a watch dog answer message is attempted	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwa-allocation-fail	INT64	Incremental	active	Measures the number of DWA message allocation failures	Increments when a DWA message allocation fails	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwa-sent	INT64	Incremental	active	Measures the number of device watch dog answer messages sent	Increments when a device watch dog answer message is sent	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwr-senderr	INT64	Incremental	active	Measures the number of device watch dog answer messages send errors	Increments when a device watch dog answer message sent is failed	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwr-twexpiry	INT64	Incremental	active	Measures the number of DWR Tw watch dog timer expiries	Increments when a DWR Tw watch dog timer expires	Per Diameter endpoint/Diamproxy level	Standard
diameter	dwr-mherr	INT64	Incremental	active	Measures the number of DWR message handle errors	Increments when a DWR message handle error occurs	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpr-sent	INT64	Incremental	active	Measures the number of disconnect peer request messages sent	Increments when a disconnect peer request message is sent	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpr-received	INT64	Incremental	active	Measures the number of disconnect peer request messages received	Increments when a disconnect peer request message is received	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpr-attempts	INT64	Incremental	active	Measures the number of disconnect peer request attempts	Increments when a disconnect peer request is attempted	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpa-sent	INT64	Incremental	active	Measures the number of disconnect peer answers sent	Increments when a disconnect peer answer is sent	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpa-nohosterr	INT64	Incremental	active	Measures the number of DPA messages failed because of no host error	Increments when a DPA message failed because of no host error	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpr-senderr	INT64	Incremental	active	Measures the number of DPR messages failed because of send error	Increments when a DPR message failed because of send error	Per Diameter endpoint/Diamproxy level	Standard
diameter	dpr-imm-closeerr	INT64	Incremental	active	Measures the number of DPR messages failed because of an immediate close error	Increments when a Diameter connection is closed due to an error in en-queuing the message	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-last-rtt	INT64	Gauge	active	Measures the round trip time (RTT) of the last Diameter message (in milliseconds)	This statistics is updated whenever the last RTT is measured	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-route-add	INT64	Incremental	active	Measures the number of Diameter routes added	Increments when a Diameter route is added	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-route-expire	INT64	Incremental	active	Measures the number of route expiry events	Increments when a Diameter route expires	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-route-miss	INT64	Incremental	active	Measures the number of route misses	Increments when a Diameter route is missed	Per Diameter endpoint/Diamproxy level	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
diameter	diam-route-indirect	INT64	Incremental	active	Measures the number of route indirects	Increments when a Diameter route is directed	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-route-install	INT64	Incremental	active	Measures the number of route installs	Increments when a Diameter route is installed	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-dyroute-add	INT64	Incremental	active	Measures the number of dynamic routes installed	Increments when a dynamic route is installed	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-dyroute-remove	INT64	Incremental	active	Measures the number of dynamic routes removed	Increments when a dynamic route is removed	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-dyroute-hit	INT64	Incremental	active	Measures the number of dynamic route hits	Increments when a dynamic route is hit	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-dyroute-expire	INT64	Incremental	active	Measures the number of dynamic route expiries	Increments when a dynamic route expires	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-peer-open	INT64	Incremental	active	Measures the number of open Diameter peer connections	Increments when a Diameter peer connection is opened	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-peer-close	INT64	Incremental	active	Measures the number of closed Diameter peer connections	Increments when a Diameter peer connection is closed	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-newpeer-open	INT64	Incremental	active	Measures the number of new peer open Diameter connections	Increments when a new Diameter peer connection is opened	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-unknown-peererr	INT64	Incremental	active	Measures the number of unknown peer connection errors	Increments when a connection from an unknown peer is received	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-open-miss	INT64	Incremental	active	Measures the number of Diameter connection open misses	Increments when a connection open fails	Per Diameter endpoint/Diamproxy level	Standard
diameter	conn-miscerr	INT64	Incremental	active	Measures the number of connection errors including socket errors	Increments when a connection fails due to socket errors or dhost errors	Per Diameter endpoint/Diamproxy level	Standard
diameter	cer-sent	INT64	Incremental	active	Measures the number of CER messages sent	Increments when a CER message is sent to a peer	Per Diameter endpoint/Diamproxy level	Standard
diameter	diam-avg-rtt	INT64	Gauge	active	Measures the average round trip time (RTT) of the Diameter messages sent so far (in milliseconds)	This statistics is updated whenever the average RTT is measured	Per Diameter endpoint/Diamproxy level	Standard
diameter	read-sdr	INT64	Incremental	active	Indicates the total number of SDR read success at Diamproxy endpoint level	Increments for every successful attempt of SDR read operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	read-sdr-err	INT64	Incremental	active	Indicates the total number of SDR read failure at Diamproxy endpoint level	Increments for every failed attempt of SDR read operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	write-sda	INT64	Incremental	active	Indicates the total number of SDR write success at Diamproxy endpoint level	Increments for every successful attempt of SDR write operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	write-sda-err	INT64	Incremental	active	Indicates the total number of SDR write failure at Diamproxy endpoint level	Increments for every failed attempt of SDR write operation	Per Diameter endpoint/Diamproxy level	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
diameter	sess-not-found	INT64	Incremental	active	Indicates the total number of requests received to recover the session but the session is not found at Diamproxy endpoint level	Increments whenever the requests is received to recover the session but the session is not found at Diamproxy endpoint level	Not Defined	Standard
diameter	read-ssr	INT64	Incremental	active	Indicates the total number of SSR read success at Diamproxy endpoint level	Increments for every successful attempt of SSR read operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	read-ssr-err	INT64	Incremental	active	Indicates the total number of SSR read failure at Diamproxy endpoint level	Increments for every failed attempt of SSR read operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	write-ssa	INT64	Incremental	active	Indicates the total number of SSR write success at Diamproxy endpoint level	Increments for every successful attempt of SSR write operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	write-ssa-err	INT64	Incremental	active	Indicates the total number of SSR write failure at Diamproxy endpoint level	Increments for every failed attempt of SSR write operation	Per Diameter endpoint/Diamproxy level	Standard
diameter	gx-sess-not-found	INT64	Incremental	active	Indicates the total number of requests received to recover the gx session but the gx session is not found at Diamproxy endpoint level	Increments whenever the requests is received to recover the gx session but the gx session is not found at Diamproxy endpoint level	Not Defined	Standard
cscf	vpnname	STRING	Primary-key	active	The name of the VPN associated with the interface.	Configuration	Per Context Level	Standard
cscf	vpnid	INT32	Primary-key	active	The identification number of the context configured on the system that is currently facilitating the CSCF service. This is an internal reference number.	Generated During System Startup	Per Context Level	Standard
cscf	svcname	STRING	Primary-key	active	Internal number that uniquely identifies an interface.	Configuration	Per CSCF Service	Standard
cscf	svcid	INT32	Primary-key	active	The identifier assign by StarOS for this service.	Generated During System Startup	Per CSCF Service	Standard
cscf	curregusers	INT32	Incremental	active	Current Registered Users	Not Defined	Not Defined	Standard
cscf	failedauth	INT64	Incremental	active	Total number of Failed Authentications.	Not Defined	Not Defined	Standard
cscf	regexp	INT64	Incremental	active	Total number of Registration Expires.	Not Defined	Not Defined	Standard
cscf	de-regs	INT64	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-regs	INT64	Incremental	active	Total number of Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-succ-regs	INT64	Incremental	active	Total number of 200 OK Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-fail-regs	INT64	Incremental	active	Total number of Failed Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-regs-403	INT64	Incremental	active	Total number of 403 responses to Registration from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-re-regs	INT64	Incremental	active	Total number of Re-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-succ-re-regs	INT64	Incremental	active	Total number of 200 OK Re-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-fail-re-regs	INT64	Incremental	active	Total number of Failed Re-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-re-regs-403	INT64	Incremental	active	Total number of 403 responses to Re-Registration from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-de-regs	INT64	Incremental	active	Total number of De-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-succ-de-regs	INT64	Incremental	active	Total number of 200 OK De-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-fail-de-regs	INT64	Incremental	active	Total number of Failed De-Registrations from Roaming UE.	Not Defined	Not Defined	Standard
cscf	total-roaming-ue-de-regs-403	INT64	Incremental	active	Total number of 403 responses to De-Registration from Roaming UE.	Not Defined	Not Defined	Standard
cscf	de-regs-fromue	INT64	Incremental	active	Total number of De-registrations from UE.	Not Defined	Not Defined	Standard
cscf	de-regs-fromnw	INT64	Incremental	active	Total number of De-registrations from Network.	Not Defined	Not Defined	Standard
cscf	sec-regs	INT64	Incremental	active	Total number of Secure Registrations.	Not Defined	Not Defined	Standard
cscf	fail-sec-regs	INT64	Incremental	active	Total number of Failed Secure Registrations	Not Defined	Not Defined	Standard
cscf	emerg-regs	INT64	Incremental	active	Total number of Emergency Registrations.	Not Defined	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary

cscf	perf-fail-3rdparty-reg-403	INT64	Incremental	active	Total number of (403 Forbidden) failure responses for 3rd party registrations initiated by S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-3rdparty-reg-404	INT64	Incremental	active	Total number of (404 Not Found) failure responses for 3rd party registrations initiated by S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-3rdparty-reg-420	INT64	Incremental	active	Total number of (420 Bad Extension) failure responses for 3rd party registrations initiated by S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-3rdparty-reg-500	INT64	Incremental	active	Total number of (500 Internal Error) failure responses for 3rd party registrations initiated by S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-3rdparty-reg-other	INT64	Incremental	active	Total number of other failure responses for 3rd party registrations initiated by S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-uar	INT64	Incremental	active	Total number of user registration status query procedures attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-uaa	INT64	Incremental	active	Total number of success response for user registration status queries attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-uaa	INT64	Incremental	active	Total number of failure response for user registration status queries attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-sar	INT64	Incremental	active	Total number of S-CSCF registration/de-registration notification procedures. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-saa	INT64	Incremental	active	Total number of success responses for S-CSCF registration/de-registration notification procedures. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-saa	INT64	Incremental	active	Total number of failure responses for S-CSCF registration/de-registration notification procedures. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-session	INT64	Incremental	active	Total number of attempted session establishments at CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-session-180	INT64	Incremental	active	Total number of 180 responses for successful session establishments at CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-session-200	INT64	Incremental	active	Total number of 200 responses (without 180 response) for successful session establishments at CSCF.	Not Defined	Not Defined	Standard
cscf	perf-ans-session	INT64	Incremental	active	Total number of 200 responses for session establishments at CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-session	INT64	Incremental	active	Total number of failure responses for session establishments at CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-lir	INT64	Incremental	active	Total number of user location query procedures attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-lia	INT64	Incremental	active	Total number of success responses for user location queries attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-lia	INT64	Incremental	active	Total number of failure responses for user location queries attempted at I-CSCF. Applicable only for I-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-session-frm-oth-domain	INT64	Incremental	active	Total number of session establishments from users of other domains. Applicable only for I-CSCF & S-CSCF.	Not Defined	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
cscf	perf-frbdn-session-frm-oth-domain	INT64	Incremental	active	Total number of forbidden sessions for session establishments from users of other domains. Applicable only for I-CSCF & S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-session-to-oth-domain	INT64	Incremental	active	Total number of session establishments to users of other domains. Applicable only for I-CSCF & S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-frbdn-session-to-oth-domain	INT64	Incremental	active	Total number of forbidden sessions for session establishments to users of other domains. Applicable only for I-CSCF & S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-init-reg-visited	INT64	Incremental	active	Total number of initial registrations of visiting users from other IMS network domains. Applicable only for P-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-frbdn-init-reg-visited	INT64	Incremental	active	Total number of forbidden messages sent for the visiting users. Applicable only for P-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-rmg-users-out	INT64	Incremental	active	Total number of roaming users to other network domains. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-mar	INT64	Incremental	active	Total number of Multimedia-Authentication-Requests attempted. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-maa	INT64	Incremental	active	Total number of successful Multimedia-Authentication-Answers received. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-maa	INT64	Incremental	active	Total number of failure Multimedia-Authentication-Answers received. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-ppr	INT64	Incremental	active	Total number of HSS-initiated user profile updates attempted. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-ppa	INT64	Incremental	active	Total number of success responses for HSS-initiated user profile update. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-ppa	INT64	Incremental	active	Total number of failure responses for HSS-initiated user profile update. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-subscribe	INT64	Incremental	active	Total number of subscription procedures attempted at S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-subscribe	INT64	Incremental	active	Total number of success responses for subscriptions. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-subscribe	INT64	Incremental	active	Total number of failure responses for subscriptions. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-att-notify	INT64	Incremental	active	Total number of notify procedures attempted at S-CSCF. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-succ-notify	INT64	Incremental	active	Total number of success responses for notify. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	perf-fail-notify	INT64	Incremental	active	Total number of failure responses for notify. Applicable only for S-CSCF.	Not Defined	Not Defined	Standard
cscf	eatf-request	INT64	Incremental	active	Total number of Emergency call Access Transfer (EATF) requests.	Not Defined	Not Defined	Standard
cscf	eatf-success	INT64	Incremental	active	Total number of Emergency call Access Transfer (EATF) successes.	Not Defined	Not Defined	Standard
cscf	eatf-failures	INT64	Incremental	active	Total number of Emergency call Access Transfer (EATF) failures.	Not Defined	Not Defined	Standard
cscf	eatf-fail-480	INT64	Incremental	active	Total number of 480 responses received.	Not Defined	Not Defined	Standard
cscf	eatf-fail-488	INT64	Incremental	active	Total number of 488 responses received.	Not Defined	Not Defined	Standard
cscf	eatf-fail-4XX	INT64	Incremental	active	Total number of 4XX responses received.	Not Defined	Not Defined	Standard
cscf	eatf-fail-500	INT64	Incremental	active	Total number of 500 responses received.	Not Defined	Not Defined	Standard
cscf	eatf-fail-5XX	INT64	Incremental	active	Total number of 5XX responses received.	Not Defined	Not Defined	Standard
cscf	eatf-fail-internal	INT64	Incremental	active	Total number of internal error responses received.	Not Defined	Not Defined	Standard
cscf	de2a-session-init	INT32	Incremental	active	Total number of DE2A sessions initiated by sending UDR message.	Not Defined	Not Defined	Standard
cscf	de2a-session-active	INT32	Incremental	active	Total number of DE2A sessions currently active.	Not Defined	Not Defined	Standard
cscf	de2a-udr-sent	INT32	Incremental	active	Total number UDR messages sent.	Not Defined	Not Defined	Standard
cscf	de2a-uda-received	INT32	Incremental	active	Total number of UDA messages received	Not Defined	Not Defined	Standard

Schema	Counter	Data-type	Statistics-type	Change	Description	Triggers	Availability	Standard or Proprietary
cscf	de2a-uda-err-3xxx	INT32	Incremental	active	Total number of messages with protocol errors.	Not Defined	Not Defined	Standard
cscf	de2a-uda-parse-err	INT32	Incremental	active	Total number of bad UDA messages received.	Not Defined	Not Defined	Standard
cscf	de2a-udr-err	INT32	Incremental	active	Total number of UDR send errors.	Not Defined	Not Defined	Standard
cscf	total-unsup-volte-saa-attempt	INT64	Incremental	active	Total number of unsupported VoLTE SAR attempts.	Not Defined	Not Defined	Standard
cscf	total-unsup-volte-reg-attempt	INT64	Incremental	active	Total number of unsupported VoLTE Reg attempts.	Not Defined	Not Defined	Standard
cscf	total-unsup-volte-reg-success	INT64	Incremental	active	Total number of unsupported VoLTE registration successes.	Not Defined	Not Defined	Standard
cscf	total-unsup-volte-reg-failure	INT64	Incremental	active	Total number of unsupported VoLTE registration failures.	Not Defined	Not Defined	Standard
pdg	vpnname	STRING	Primary-key	active	The name of the VPN associated with the interface.	Configuration	Per Context Level	Standard
pdg	vpnid	INT32	Primary-key	active	The identification number of the context configured on the system that is currently facilitating the PDG service. This is an internal reference number.	Generated During System Startup	Per Context Level	Standard
pdg	svcname	STRING	Primary-key	active	Internal number that uniquely identifies an interface.	Configuration	Per PDG Service	Standard
pdg	svcid	INT32	Primary-key	active	The identifier assign by StarOS for this service.	Generated During System Startup	Per PDG Service	Standard
pdg	bindaddress	STRING	Primary-key	active	The IP address bound to this PDG service.	Not Defined	Not Defined	Standard
pdg	state	STRING	Primary-key	active	The current state of this service.	Not Defined	Not Defined	Standard
pdg	sess-ttlcursess	INT32	Gauge	active	Number of total current sessions. This variable is proprietary.	Not Defined	IPSec/SSL	Standard
pdg	sess-curact	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curdorm	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curactipv4	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curdormipv4	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curactipv6	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curdormipv6	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curdiripipv4	INT32	Gauge	active	Number of current direct IP IPv4 sessions. This variable is proprietary.	Not Defined	IPSec/SSL	Standard
pdg	sess-curdiripipv6	INT32	Gauge	active	Not Defined	Not Defined	IPSec/SSL	Standard
pdg	sess-curpdgpmipipv4	INT32	Gauge	active	Not Defined	Not Defined	IPSec/SSL	Standard
pdg	sess-curttgipv4	INT32	Incremental	Obsolete	Not Defined	Not Defined	Not Defined	Standard
pdg	sess-curttgipv6	INT32	Gauge	active	Not Defined	Not Defined	IPSec/SSL	Standard
