

Release Notes for the Ultra Cloud Core Session Management Function

Version 2021.02.2

First Published: October 29, 2021

Last Updated: October 29, 2021

Introduction

This Release Notes identifies changes and issues related to this software release.

Release Package Version Information

Software Packages	Version
ccg.2021.02.2.SPA.tgz	2021.02.2

NOTE: The *ccg.<version>.SPA.tgz* software package is common to both the cnSGW and SMF 5G Network Functions (NF). The deployment and configuration procedure determines the NF deployment.

Descriptions for the software packages provided with this release are available in the [Release Package Descriptions](#) section.

Verified Compatibility

Products	Version
Ultra Cloud Core SMI	2020.02.2.41
Ultra Cloud CDL	1.4
Ultra Cloud Core UPF	2021.02.2
Ultra Cloud cnSGWc	2021.02.2

Related Documentation

Installation and Upgrade Notes

This Release Notes does not contain general installation and upgrade instructions. Refer to the existing installation documentation for specific installation and upgrade considerations.

Software Integrity Verification

To verify the integrity of the software image you have from Cisco, you can validate the SHA512 checksum information against the checksum identified by Cisco for the software.

Image checksum information is available through **Cisco.com Software Download Details**. To find the checksum, hover the mouse pointer over the software image you have downloaded.

At the bottom you find the SHA512 checksum, if you do not see the whole checksum you can expand it by pressing the "... " at the end.

To validate the information, calculate a SHA512 checksum using the information in [Table 1](#) and verify that it matches the one provided on the software download page.

To calculate a SHA512 checksum on your local desktop please see the table below.

Table 1 – Checksum Calculations per Operating System

Operating System	SHA512 checksum calculation command examples
Microsoft Windows	Open a command line window and type the following command > certutil.exe -hashfile <filename>.<extension> SHA512
Apple MAC	Open a terminal window and type the following command \$ shasum -a 512 <filename>.<extension>
Linux	Open a terminal window and type the following command \$ sha512sum <filename>.<extension> Or \$ shasum -a 512 <filename>.<extension>
NOTES: <filename> is the name of the file. <extension> is the file extension (e.g. .zip or .tgz).	

If the SHA512 checksum matches, you can be sure that no one has tampered with the software image or the image has not been corrupted during download.

If the SHA512 checksum does not match, we advise you to not attempt upgrading any systems with the corrupted software image. Download the software again and verify the SHA512 checksum again. If there is a constant mismatch, please open a case with the Cisco Technical Assistance Center.

Certificate Validation

SMF software images are signed via x509 certificates. Please view the .README file packaged with the software for information and instructions on how to validate the certificates.

Open Bugs for this Release

None in this release.

Resolved Bugs for this Release

The following table lists the known bugs that are resolved in this specific software release.

NOTE: This software release may contain bug fixes first introduced in other releases. Additional information for all resolved bugs for this release are available in the [Cisco Bug Search Tool](#).

Bug ID	Headline	Behavior Change
CSCvy59735	[cn-sgw-infra]- Failure when MBRequest is received less number of bearer context - BGIPC improvement	No
CSCvz65102	TMO Rating Failures in 80 PODS - Add stats (BEMS01322676)	No
CSCvz72223	[SMF]:When 5g modify is suspended and resumed, ebi- >qosFlow update is not happening.	No
CSCvz78232	[SMF]: UDM subscription fetch shouldn't include PLMN	No
CSCvz78238	[SMF]: DCR stats not pegged if Voice Call is active and Vedio call is terminated	No
CSCvz83328	SMF needs to handle back to back Ue init pdu mod and svc request to setup n3	No
CSCvz83692	[SMF]:SMF sends UBR with existing Packet Filter ID	No
CSCvz86149	[SMF]: PDU establishment collision with Service req	No
CSCvz86155	[SMF]: PDU establishment no response from Access	No
CSCvz87130	[GR-SVI] BFD Link failure observed, when we add/delete/modify the policy	No
CSCvz87483	PCF Fail-open :unHndlTrans for UE init modify - BEMSS01341412	No

Operator Notes

Cloud Native Product Version Numbering System

The **show helm list** command displays detailed information about the version of the cloud native product currently deployed.

The appropriate version number field increments after a version has been released. The new version numbering format is a contiguous sequential number that represents incremental changes between releases. This format facilitates identifying the changes between releases when using Bug Search Tool to research software releases.

Release Package Descriptions

[Table 2](#) provides descriptions for the software packages that are available with this release.

Table 2 - Release Package Information

Software Packages	Description
ccg.<version>.SPA.tgz	The SMF offline release signature package. This package contains the SMF deployment software as well as the release signature, certificate, and verification information.

NOTE: The *ccg.<version>.SPA.tgz* software package is common to both the cnSGW and SMF 5G Network Functions (NF). The deployment and configuration procedure determines the NF deployment.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, refer to <https://www.cisco.com/c/en/us/support/index.html>.
