## End-of-Sale for Cisco Managed CPE and CPE-as-a-Service Offers

Enterprises are looking to improve business agility and drive cost savings by using SDN/NFV technologies. They want Service Providers to help them achieve these objectives by offering Managed Services such as SD-WAN, Cloud VPN etc. Accordingly, Service Providers are evolving their Enterprise Services portfolio to address customer demands and generate new revenue streams.

We, at CMS, are also evolving our business services portfolio to align with these market needs, and have recently introduced Managed SD-WAN service. At the same time, to maintain portfolio simplicity and avoid potential offer overlaps, we are announcing End of Sale for Managed CPE (MCPE) and CPE-as-a-Service(CPEaaS) offerings with immediate effect.

There is no replacement planned for CPEaaS offer going forward.
