- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]"

replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent

infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and
You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of

such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

1.69 angular-route 1.2.28

1.69.1 Available under license :

No license file was found, but licenses were detected in source scan.

```
/**
 * @license AngularJS v1.2.28
 * (c) 2010-2014 Google, Inc. http://angularjs.org
 * License: MIT
 */
```

Found in path(s):

```

```
# packaged angular-route
```

This repo is for distribution on `npm` and `bower`. The source for this module is in the [main AngularJS repo](https://github.com/angular/angular.js/tree/master/src/ngRoute). Please file issues and pull requests against that repo.

```
## Install
```

You can install this package either with `npm` or with `bower`.

```
### npm
```

```
```shell
npm install angular-route
```
```

Add a ``<script>`` to your `index.html`:

```
```html
<script src="/node_modules/angular-route/angular-route.js"></script>
```
```

Then add `ngRoute` as a dependency for your app:

```
```javascript
angular.module('myApp', ['ngRoute']);
```
```

Note that this package is not in CommonJS format, so doing `require('angular-route')` will return `undefined`.

bower

```
```shell
bower install angular-route
```
```

Add a ``<script>`` to your `index.html`:

```
```html
<script src="/bower_components/angular-route/angular-route.js"></script>
```
```

Then add `ngRoute` as a dependency for your app:

```
```javascript
angular.module('myApp', ['ngRoute']);
```
```

Documentation

Documentation is available on the
[AngularJS docs site](<http://docs.angularjs.org/api/ngRoute>).

1.70.1 Available under license :

Jackson JSON processor

Jackson is a high-performance, Free/Open Source JSON processing library.

It was originally written by Tatu Saloranta (tatu.saloranta@iki.fi), and has been in development since 2007.

It is currently developed by a community of developers, as well as supported commercially by FasterXML.com.

Licensing

Jackson core and extension components may be licensed under different licenses.

To find the details that apply to this artifact see the accompanying LICENSE file.

For more information, including possible other licensing options, contact FasterXML.com (<http://fasterxml.com>).

Credits

A list of contributors may be found from CREDITS file, which is included in some artifacts (usually source distributions); but is always available from the source code management (SCM) system project uses.

This copy of Jackson JSON processor streaming parser/generator is licensed under the Apache (Software) License, version 2.0 ("the License").

See the License for details about distribution rights, and the specific rights regarding derivate works.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1

through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their

Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or

consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

^n`@suppress {checkTypes} checked by tsc`
^n`@license`
^nCopyright Google Inc. All Rights Reserved.
^nUse of this source code is governed by an MIT-style license that can be found in the LICENSE file at https://angular.io/license
^n`@experimental`
^n`@record`
^n`@whatItDoes`
`Location` is a service that applications can use to interact with a browser's URL.
^n`@description`
Depending on which `@link LocationStrategy` is used, `Location` will either persist to the URL's path or the URL's hash segment.
^nNote: it's better to use `@link Router#navigate` service to trigger route changes. Use `Location` only if you need to interact with or create normalized URLs outside of routing.
^n`Location` is responsible for normalizing the URL against the application's base href.
^nA normalized URL is absolute from the URL host, includes the application's base href, and has no trailing slash:
^n`~/my/app/user/123` is normalized
^n`~/my/app/user/123` is not normalized
^n`~/my/app/user/123` is not normalized
### Example
`@example`
common/location/ts/path_location_component.ts
region='LocationComponent'
`stable`
^nvar Location =
/** @class */ (function () {

@@description PathLocationStrategy` is a {@link LocationStrategy} used to configure the {@link Location} service to represent its state in the

[\[path\]\(https://en.wikipedia.org/wiki/Uniform_Resource_Locator#Syntax\)](https://en.wikipedia.org/wiki/Uniform_Resource_Locator#Syntax) of the browser's URL. If you're using PathLocationStrategy, you must provide a {@link APP_BASE_HREF} or add a base element to the document. This URL prefix that will be preserved when generating and recognizing URLs. For instance, if you provide an APP_BASE_HREF of `/my/app` and call location.go('/foo'), the browser's URL will become example.com/my/app/foo. Similarly, if you add <base href="/my/app"/> to the document and call location.go('/foo'), the browser's URL will become example.com/my/app/foo.

Example

date formats:\n * - `full` should contain long-weekday (EEEE), year (y), long-month (MMMM), day (d).\n *\n * For
example, English uses `EEEE, MMMM d, y`, corresponding to a date like\n * `Tuesday, September 14,
1999`.\n *\n * - `long` should contain year, long-month, day.\n *\n * For example, `MMMM d, y`, corresponding
to a date like `September 14, 1999`.\n *\n * - `medium` should contain year, abbreviated-month (MMM), day.\n
*\n * For example, `MMM d, y`, corresponding to a date like `Sep 14, 1999`.\n *\n * For languages that do not use
abbreviated months, use the numeric month (MM/M). For example,\n * `y/MM/dd`, corresponding to a date like
`1999/09/14`.\n *\n * - `short` should contain year, numeric-month (MM/M), and day.\n *\n * For example,
`M/d/yy`, corresponding to a date like `9/14/99`.\n *\n * \\\n * @experimental i18n support is experimental.\n *\n
* @param {?} locale\n * @param {?} width\n * @return {?} }\n *\n */\n\nfunction getLocaleDateFormat(locale, width) {\n
var /** @type {?} */ data = findLocaleData(locale);\n  return data[10 /* DateFormat */][width];\n}\n\n/**\n * Time
format that depends on the locale.\n *\n * The standard formats include four basic time formats:\n * - `full` should
contain hour (h/H), minute (mm), second (ss), and zone (zzzz).\n * - `long` should contain hour, minute, second, and
zone (z)\n * - `medium` should contain hour, minute, second.\n * - `short` should contain hour, minute.\n *\n * Note:
The patterns depend on whether the main country using your language uses 12-hour time or\n * not:\n * - For
12-hour time, use a pattern like `hh:mm a` using h to mean a 12-hour clock cycle running\n * 1 through 12
(midnight plus 1 minute is 12:01), or using K to mean a 12-hour clock cycle\n * running 0 through 11 (midnight
plus 1 minute is 0:01).\n * - For 24-hour time, use a pattern like `HH:mm` using H to mean a 24-hour clock cycle
running\n * 0 through 23 (midnight plus 1 minute is 0:01), or using k to mean a 24-hour clock cycle running\n * 1
through 24 (midnight plus 1 minute is 24:01).\n *\n * \\\n * @experimental i18n support is experimental.\n *\n * @param
{?} locale\n * @param {?} width\n * @return {?} }\n *\n */\n\nfunction getLocaleTimeFormat(locale, width) {\n  var /**
@type {?} */ data = findLocaleData(locale);\n  return data[11 /* TimeFormat */][width];\n}\n\n/**\n * Date-time
format that depends on the locale.\n *\n * The date-time pattern shows how to combine separate patterns for date
(represented by {1})\n * and time (represented by {0}) into a single pattern. It usually doesn't need to be changed.\n
*\n * What you want to pay attention to are:\n * - possibly removing a space for languages that don't use it, such as
many East Asian languages\n * - possibly adding a comma, other punctuation, or a combining word\n *\n * For
example:\n * - English uses `{1} 'at' {0}` or `{1}, {0}` (depending on date style), while Japanese uses\n *
`{1}{0}`.\n * - An English formatted date-time using the combining pattern `{1}, {0}` could be\n * `Dec 10, 2010,
3:59:49 PM`. Notice the comma and space between the date portion and the time\n * portion.\n *\n * There are four
formats (`full`, `long`, `medium`, `short`); the determination of which to use\n * is normally based on the date
style. For example, if the date has a full month and weekday\n * name, the full combining pattern will be used to combine
that with a time. If the date has\n * numeric month, the short version of the combining pattern will be used to
combine that with a\n * time. English uses `{1} 'at' {0}` for full and long styles, and `{1}, {0}` for medium and
short\n * styles.\n *\n * \\\n * @experimental i18n support is experimental.\n *\n * @param {?} locale\n * @param {?}

```

```

width\n * @return {?} \n *\nfunction getLocaleDateTimeFormat(locale, width) {\n  var /** @type {?} */ data =

Number format that depends on the locale.\n *\n * Numbers are formatted using patterns, like `#,###.00`. For
example, the pattern `#,###.00`\n * when used to format the number 12345.678 could result in `"12'345,67"`. That
would happen if the\n * grouping separator for your language is an apostrophe, and the decimal separator is a
comma.\n *\n * <b>Important:</b> The characters `.``,``,`0`,`#` (and others below) are special placeholders;\n *
they stand for the decimal separator, and so on, and are NOT real characters.\n * You must NOT "translate" the
placeholders; for example, don't change `.` to `,` even though in\n * your language the decimal point is written
with a comma. The symbols should be replaced by the\n * local equivalents, using the Number Symbols for your
language.\n *\n * Here are the special characters used in number patterns:\n *\n * | Symbol | Meaning |\n * |-----|-----|
\n * | . | Replaced automatically by the character used for the decimal point. |\n * | , | Replaced by the
"grouping" (thousands) separator. |\n * | 0 | Replaced by a digit (or zero if there aren't enough digits). |\n *
| # | Replaced by a digit (or nothing if there aren't enough). |\n * | ¤ | This will be replaced by a currency
symbol, such as $ or USD. |\n * | % | This marks a percent format. The % symbol may change position, but must
be retained. |\n * | E | This marks a scientific format. The E symbol may change position, but must be retained.
|\n * | ' | Special characters used as literal characters are quoted with ASCII single quotes. |\n *\n * You can
find more information\n * [on the CLDR website](http://cldr.unicode.org/translation/number-patterns)\n *\n *

  return NgForOfContext;
})();

```

The `NgForOf` directive instantiates a template once per item from an iterable. The context for each instantiated template inherits from the outer context with the given loop variable set to the current item from the iterable.

Local Variables

`NgForOf` provides several exported values that can be aliased to local variables:

- `$implicit: T`: The value of the individual items in the iterable (`ngForOf`).
- `ngForOf: NgIterable<T>`: The value of the iterable expression. Useful when the expression is more complex than a property access, for example when using the async pipe (`userStreams | async`).
- `index: number`: The index of the current item in the iterable.
- `first: boolean`: True when the item is the first item in the iterable.
- `last: boolean`: True when the item is the last item in the iterable.
- `even: boolean`: True when the item has an even index in the iterable.
- `odd: boolean`: True when the item has an odd index in the iterable.

```

<li *ngFor="let user of userObservable | async as users; index as i; first as isFirst">
  {{i}} / {{users.length}}. {{user}} <span *ngIf="isFirst">default</span>
</li>

```

Change Propagation

When the contents of the iterator changes, `NgForOf` makes the corresponding changes to the DOM:

- When an item is added, a new instance of the template is added to the DOM.
- When an item is removed, its template instance is removed from the DOM.
- When items are reordered, their respective templates are reordered in the DOM.
- Otherwise, the DOM element for that item will remain the same.

Angular uses object identity to track insertions and deletions within the iterator and reproduce those changes in the DOM. This has important implications for animations and any stateful controls (such as `<input>` elements which accept user input) that are present. Inserted rows can be animated in, deleted rows can be animated out, and unchanged rows retain any unsaved state such as user input.

It is possible for the identities of elements in the iterator to change while the data does not. This can happen, for example, if the iterator produced from an RPC to the server, and that RPC is re-run. Even if the data hasn't changed, the second response will produce objects with different identities, and Angular will tear down the entire DOM and rebuild it (as if all old elements were deleted and all new elements inserted). This is an expensive operation and should be avoided if possible.

To customize the default tracking algorithm, `NgForOf` supports `trackBy` option. `trackBy` takes a function which has two arguments: `index` and `item`. If `trackBy` is given, Angular tracks changes by the return value of the function.

Syntax

```

<li *ngFor="let item of items; index as i; trackBy: trackByFn">...</li>

```

With `<ng-template>` element:

```

<ng-template ngFor let-item [ngForOf]="items" let-i="index" [ngForTrackBy]="trackByFn">
  <li>...</li>
</ng-template>

```

Example

See a [live demo](http://plnkr.co/edit/KVuXxDp0qinGDyo307QW?p=preview) (<http://plnkr.co/edit/KVuXxDp0qinGDyo307QW?p=preview>) for a more detailed example.

    /**\n
    * Conditionally

```

includes a template based on the value of an `expression`.
`ngIf` evaluates the `expression` and then renders the `then` or `else` template in its place when expression is truthy or falsy respectively. Typically the `then` template is the inline template of `ngIf` unless bound to a different value. The `else` template is blank unless it is bound.
Most common usage
The most common usage of the `ngIf` directive is to conditionally show the inline template as seen in this example:

```

<div *ngIf="condition">...</div>

```

Showing an alternative template using `else`
If it is necessary to display a template when the `expression` is falsy use the `else` template binding as shown. Note that the `else` binding points to a `` labeled `#elseBlock`.
The template can be defined anywhere in the component view but is typically placed right after `ngIf` for readability.

```

<div *ngIf="condition">...</div>
<ng-template #elseBlock>...</ng-template>

```

Using non-inlined `then` template
Usually the `then` template is the inlined template of the `ngIf`, but it can be changed using a binding (just like `else`). Because `then` and `else` are bindings, the template references can change at runtime as shown in this example.

```

<div *ngIf="condition">...</div>
<ng-template #thenBlock>...</ng-template>
<ng-template #elseBlock>...</ng-template>

```

Storing conditional result in a variable
A common pattern is that we need to show a set of properties from the same object. If the object is undefined, then we have to use the safe-traversal-operator `?.` to guard against dereferencing a `null` value. This is especially the case when waiting on async data such as when using the `async` pipe as shown in following example.

```

Hello {{ (userStream|async)?.last }}, {{ (userStream|async)?.first }}!

```

There are several inefficiencies in the above example:

- We create multiple subscriptions on `userStream`. One for each `async` pipe, or two in the example above.
- We cannot display an alternative screen while waiting for the data to arrive asynchronously.
- We have to use the safe-traversal-operator `?.` to access properties, which is cumbersome.
- We have to place the `async` pipe in parenthesis.

A better way to do this is to use `ngIf` and store the result of the condition in a local variable as shown in the the example below:

```

<div *ngIf="condition">...</div>
<ng-template [ngIf]="condition"><div>...</div></ng-template>

```

Syntax
Simple form:

```

<div *ngIf="condition">...</div>

```

Form with an else block:

```

<div *ngIf="condition; else elseBlock">...</div>
<ng-template #elseBlock>...</ng-template>

```

Form with a `then` and `else` block:

```

<div *ngIf="condition; then thenBlock else elseBlock">...</div>
<ng-template #thenBlock>...</ng-template>
<ng-template #elseBlock>...</ng-template>

```

Form with storing the value locally:

```

<div *ngIf="condition as value; else elseBlock">{{ value }}</div>
<ng-template #elseBlock>...</ng-template>

```

```

```

DOM sub-trees that match the switch expression's pluralization category. To use this directive you must provide a container element that sets the `[ngPlural]` attribute to a switch expression. Inner elements with a `[ngPluralCase]` will display based on their expression - if `[ngPluralCase]` is set to a value starting with `=`, it will only display if the value matches the switch expression exactly - otherwise, the view will be treated as a "category match", and will only display if exact value matches aren't found and the value maps to its category for the defined locale. See <http://cldr.unicode.org/index/cldr-spec/plural-rules>

```

 @whatItDoes Formats a date according to locale rules.
 @howToUse `date_expression` | date[:format[:timezone[:locale]]]
 @description
 Where: `expression` is a date object or a number (milliseconds since UTC epoch) or an ISO string (https://www.w3.org/TR/NOTE-datetime).
 `format` indicates which date/time components to include. The format can be predefined as shown below (all examples are given for `en-US`) or custom as shown in the table.
 - `short`: equivalent to `M/d/yy, h:mm a` (e.g. `6/15/15, 9:03 AM`)
 - `medium`: equivalent to `MMM d, y, h:mm:ss a` (e.g. `Jun 15, 2015, 9:03:01 AM`)
 - `long`: equivalent to `MMMM d, y, h:mm:ss a z` (e.g. `June 15, 2015 at 9:03:01 AM GMT+1`)
 - `full`: equivalent to `EEEE, MMMM d, y, h:mm:ss a zzzz` (e.g. `Monday, June 15, 2015 at 9:03:01 AM GMT+01:00`)
 - `shortDate`: equivalent to `M/d/yy` (e.g. `6/15/15`)
 - `mediumDate`: equivalent to `MMM d, y` (e.g. `Jun 15, 2015`)
 - `longDate`: equivalent to `MMMM d, y` (e.g. `June 15, 2015`)
 - `fullDate`: equivalent to `EEEE, MMMM d, y` (e.g. `Monday, June 15, 2015`)
 - `shortTime`: equivalent to `h:mm a` (e.g. `9:03 AM`)
 - `mediumTime`: equivalent to `h:mm:ss a` (e.g. `9:03:01 AM`)
 - `longTime`: equivalent to `h:mm:ss a z` (e.g. `9:03:01 AM GMT+1`)
 - `fullTime`: equivalent to `h:mm:ss a zzzz` (e.g. `9:03:01 AM GMT+01:00`)
 - `timezone` to be used for formatting. It understands UTC/GMT and the continental US time zone abbreviations, but for general use, use a time zone offset, for example, `+0430` (4 hours, 30 minutes east of the Greenwich meridian)
 If not specified, the local system timezone of the end-user's browser will be used.
 - `locale` is a string defining the locale to use (uses the current LOCALE_ID by default)

| Field Type | Format | Description |
|---------------------------------|---------------------------------|---|
| Example Value | | |
| | | Era G, GG & GGG Abbreviated |
| | AD | GGGG Wide |
| | Anno Domini | GGGGG Narrow |
| | A | Year y Numeric: |
| minimum digits | 2, 20, 201, 2017, 20173 | yy |
| Numeric: 2 digits + zero padded | 02, 20, 01, 17, 73 | |
| yyy | Numeric: 3 digits + zero padded | 002, 020, 201, 2017, 20173 |
| | yyyy | Numeric: 4 digits or more + zero padded |
| | Month | M Numeric: 1 digit |
| | MM | Numeric: 2 digits + zero padded |
| | MMM | Abbreviated |
| | MMMM | Wide |
| | MMMMM | Narrow |
| | Month standalone | L Numeric: 1 digit |
| | LL | Numeric: 2 digits + zero padded |
| | LLL | Abbreviated |
| | LLLL | Wide |
| | LLLLL | Narrow |
| | Week of year | w Numeric: minimum digits |
| | ww | Numeric: 2 digits + zero padded |
| 01... 53 | Week of month | W Numeric: 1 digit |
| 1... 5 | Day of month | d Numeric: minimum digits |
| 1 | dd | Numeric: 2 digits + zero padded |
| 01 | Week day | E, EE & EEE Abbreviated |

| | | | |
|--|--|--|--|
| Tue | \n * | EEEE | Wide |
| Tuesday | \n * | EEEEE | Narrow |
| T | \n * | EEEEEEE | Short |
| Tu | \n * Period | a, aa & aaa | Abbreviated |
| am/pm or AM/PM | \n * | aaaa | Wide (fallback to `a` when missing) |
| ante meridiem/post meridiem | \n * | aaaaa | Narrow |
| a/p | \n * Period* | B, BB & BBB | |
| Abbreviated | mid. | \n * | BBBB |
| Wide | am, pm, midnight, noon, morning, afternoon, evening, night | \n * | |
| BBBBB | Narrow | md | \n * Period |
| standalone* b, bb & bbb | Abbreviated | mid. | \n * |
| bbbb | Wide | am, pm, midnight, noon, morning, afternoon, evening, night | \n * |
| bbbbbb | Narrow | md | |
| \n * Hour 1-12 | h | Numeric: minimum digits | 1, 12 |
| \n * | hh | Numeric: 2 digits + zero padded | 01, 12 |
| \n * Hour 0-23 | H | Numeric: minimum digits | 0, 23 |
| \n * | HH | Numeric: 2 digits + zero padded | 00, 23 |
| \n * Minute | m | Numeric: minimum digits | |
| 8, 59 | \n * | mm | Numeric: 2 digits + zero padded |
| 08, 59 | \n * Second | s | Numeric: minimum digits |
| 0... 59 | \n * | ss | Numeric: 2 digits + zero padded |
| 00... 59 | \n * Fractional seconds | S | Numeric: 1 digit |
| 0... 9 | \n * | SS | Numeric: 2 digits + zero padded |
| padded | 00... 99 | \n * | SSS Numeric: 3 digits |
| + zero padded (= milliseconds) | 000... 999 | \n * Zone | z, zz & zzz |
| Short specific non location format (fallback to O) | GMT-8 | \n * | |
| zzzz | Long specific non location format (fallback to OOOO) | GMT-08:00 | |
| \n * | Z, ZZ & ZZZ ISO8601 basic format | -0800 | |
| \n * | ZZZZ Long localized GMT format | GMT-8:00 | |
| \n * | ZZZZZ ISO8601 extended format + Z indicator for offset 0 (= XXXXX) | -08:00 | |
| \n * | O, OO & OOO Short localized GMT format | | |
| GMT-8 | \n * | OOOO Long localized GMT format | |
| GMT-08:00 | \n * | \n * \n * \n * | When the expression is a ISO string without time (e.g. 2016-09-19) the time zone offset is not \n * applied and the formatted text will have the same day, month and year of the expression. |

\n * WARNINGS:\n * - this pipe has only access to en-US locale data by default. If you want to localize the dates\n * in another language, you will have to import data for other locales.\n * See the [{@linkDocs guide/i18n#i18n-pipes "I18n guide"}](#) to know how to import additional locale\n * data.\n * - Fields suffixed with * are only available in the extra dataset.\n * See the [{@linkDocs guide/i18n#i18n-pipes "I18n guide"}](#) to know how to import extra locale\n * data.\n * - this pipe is marked as pure hence it will not be re-evaluated when the input is mutated.\n * Instead users should treat the date as an immutable object and change the reference when the\n * pipe needs to re-run (this is to avoid reformatting the date on every change detection run\n * which would be an expensive operation).\n * \n * ### Examples\n * \n * Assuming `dateObj` is (year: 2015, month: 6, day: 15, hour: 21, minute: 43, second: 11)\n * in the `_local_` time and locale is 'en-US':\n * \n *

```

```

* Timezone of the formatted text will be the local system timezone of the end-user's machine.\n * When the expression is a ISO string without time (e.g. 2016-09-19) the time zone offset is not\n * applied and the formatted text will have the same day, month and year of the expression.\n * WARNINGS:\n * - this pipe is marked as pure hence it will not be re-evaluated when the input is mutated.\n * Instead users should treat the date as an immutable object and change the reference when the\n * pipe needs to re-run (this is to avoid reformatting the date on every change detection run\n * which would be an expensive operation).\n * - this pipe uses the Internationalization API. Therefore it is only reliable in Chrome and Opera\n * browsers.\n * ### Examples\n * Assuming `dateObj` is (year: 2010, month: 9, day: 3, hour: 12 PM, minute: 05, second: 08)\n * in the `_local_` time and locale is 'en-US':\n *

@@ngModule CommonModule
@@whatItDoes Formats a number according to locale rules.
@@howToUse `number_expression | number[:digitInfo[:locale]]`
Formats a number as text. Group sizing and separator and other locale-specific configurations are based on the active locale where `expression` is a number. - `digitInfo` is a `string` which has a following format:   

{minIntegerDigits}.{minFractionDigits}-{maxFractionDigits}
- `minIntegerDigits` is the minimum number of integer digits to use. Defaults to `1`. - `minFractionDigits` is the minimum number of digits after fraction. Defaults to `0`. - `maxFractionDigits` is the maximum number of digits after fraction. Defaults to `3`. - `locale` is a `string` defining the locale to use (uses the current {@link LOCALE_ID} by default). For more information on the acceptable range for each of these numbers and other details see your native internationalization library.

It encodes inheritance,\n     properties, and events.\n     * ## Overview\n     * Each line represents one kind of element. The\n     `element_inheritance` and properties are joined\n     using `element_inheritance|properties` syntax.\n     * ##

```

Element Inheritance

The `element_inheritance`` can be further subdivided as

`element1,element2,...^parentElement``. Here the individual elements are separated by ``` (commas). Every element in the list has identical properties.

An `element`` may inherit additional properties from `parentElement``. If no `parentElement`` is specified then `""` (blank) element is assumed.

NOTE: The blank element inherits from root `[Element]`` element, the super element of all elements.

NOTE: An element prefix such as `:svg:`` has no special meaning to the schema.

Properties

Each element has a set of properties separated by ``` (commas). Each property can be prefixed by a special character designating its type:

- (no prefix): property is a string.
- `-`*``: property represents an event.
- `-`!``: property is a boolean.
- `-`#``: property is a number.
- `-`%``: property is an object.

Query

The class creates an internal squas representation which allows to easily answer the query of if a given property exist on a given element.

NOTE: We don't yet support querying for types or events.

NOTE: This schema is auto extracted from `schema_extractor.ts`` located in the test folder, see `dom_element_schema_registry_spec.ts``

* Please make sure to keep to edits in sync with the source file.\n *^n * Source:\n *
https://github.com/webcomponents/webcomponentsjs/blob/4efecd7e0e/src/ShadowCSS/ShadowCSS.js\n *^n * The
original file level comment is reproduced below\n *^n/*\n * This is a limited shim for ShadowDOM css styling.\n
https://dvcs.w3.org/hg/webcomponents/raw-file/tip/spec/shadow/index.html#styles\n\n The intention here is to
support only the styling features which can be\n relatively simply implemented. The goal is to allow users to avoid
the\n most obvious pitfalls and do so without compromising performance significantly.\n For ShadowDOM styling
that's not covered here, a set of best practices\n can be provided that should allow users to accomplish more
complex styling.\n\n The following is a list of specific ShadowDOM styling features and a brief\n discussion of the
approach used to shim.\n\n Shimmed features:\n\n * :host, :host-context: ShadowDOM allows styling of the

```

shadowRoot's host element using the :host rule. To shim this feature, the :host styles are reformatted and prefixed with a given scope name and promoted to a document level stylesheet. For example, given a scope name of .foo, a rule like this:

```

:host {
  background: red;
}

```

becomes:

```

.foo {
  background: red;
}

```

* encapsulation: Styles defined within ShadowDOM, apply only to dom inside the ShadowDOM. Polymer uses one of two techniques to implement this feature. By default, rules are prefixed with the host element tag name as a descendant selector. This ensures styling does not leak out of the 'top' of the element's ShadowDOM. For example,

```

div {
  font-weight: bold;
}

```

becomes:

```

x-foo div {
  font-weight: bold;
}

```

Alternatively, if WebComponents.ShadowCSS.strictStyling is set to true then selectors are scoped by adding an attribute selector suffix to each simple selector that contains the host element tag name. Each element in the element's ShadowDOM template is also given the scope attribute. Thus, these rules match only elements that have the scope attribute. For example, given a scope name of x-foo, a rule like this:

```

div {
  font-weight: bold;
}

```

becomes:

```

div[x-foo] {
  font-weight: bold;
}

```

Note that elements that are dynamically added to a scope must have the scope selector added to them manually.

* upper/lower bound encapsulation: Styles which are defined outside a shadowRoot should not cross the ShadowDOM boundary and should not apply inside a shadowRoot. This styling behavior is not emulated. Some possible ways to do this that were rejected due to complexity and/or performance concerns include: (1) reset every possible property for every possible selector for a given scope name; (2) re-implement css in javascript. As an alternative, users should make sure to use selectors specific to the scope in which they are working.

* ::distributed: This behavior is not emulated. It's often not necessary to style the contents of a specific insertion point and instead, descendants of the host element can be styled selectively. Users can also create an extra node around an insertion point and style that node's contents via descendent selectors. For example, with a shadowRoot like this:

```

<style>
  ::content(div) {
    background: red;
  }
</style>
<content></content>

```

could become:

```

<style>
  /*@polyfill .content-container div * ^
  ::content(div) {
    background: red;
  }
</style>
<div class="content-container">
<content></content>
</div>

```

Note the use of @polyfill in the comment above a ShadowDOM specific style declaration. This is a directive to the styling shim to use the selector in comments in lieu of the next selector when running under polyfill.

```

    if (opt_userInfo != null) {
      out.push(opt_userInfo + '@');
    }
    out.push(opt_domain);
  }
  if (opt_port != null) {
    out.push(': ' + opt_port);
  }
  if (opt_path != null) {
    out.push(opt_path);
  }
  if (opt_queryData != null) {
    out.push('? ' + opt_queryData);
  }
  if (opt_fragment != null) {
    out.push('# ' + opt_fragment);
  }
  return out.join('');
}

```

A regular expression for breaking a URI into its component parts.

```

@@link
http://www.gbiv.com/protocols/uri/rfc/rfc3986.html#RFC2234

```

As the "first-match-wins" algorithm is identical to the "greedy" disambiguation method used by POSIX regular expressions, it is natural and commonplace to use a regular expression for parsing the potential five components of a URI reference. The following line is the regular expression for breaking-down a well-formed URI reference into its components.

```

^((?:[^\s:/#\?]+)?(?:/[^\s#]*)?(?:[^\s#]*)(\?([^\s#]*)?(\#[^\s]*)?)?)$

```

The numbers in the second line above are only to assist readability; they indicate the reference points for each subexpression (i.e., each paired parenthesis). We refer to the value matched for subexpression <n> as \$<n>.

For example, matching the above expression to `http://www.ics.uci.edu/pub/ietf/uri/#Related` results in the following subexpression matches:

```

$1 = http
$2 = http
$3 = //www.ics.uci.edu
$4 = www.ics.uci.edu
$5 = /pub/ietf/uri
$6 = <undefined>
$7 = <undefined>
$8 = #Related
$9 = Related

```

where <undefined> indicates that the component is not present, as is the case for the query component in the above example. Therefore, we can determine the value of the five components as

```

scheme = $2
authority = $4
path = $5
query = $7
fragment = $9

```

The regular expression has been modified slightly to expose the userInfo, domain, and port separately from the authority. The modified version yields

```

$1 = http
scheme
$2 = <undefined>
userInfo
$3 = www.ics.uci.edu
domain | authority
$4 = <undefined>
port
$5 = /pub/ietf/uri/
path
$6 = <undefined>
query without ?
$7 = Related
fragment without #

```

```

@internal
* \nvar _splitRe = new RegExp('^ + (?:' + ([^\s:/#.]+) + // scheme - ignore special characters
'?:/' + ([^\s#]*) + // userInfo
'([\\w\\d\\-\\.\\u0100-\\uffff.%]*)' + // domain - restrict to letters,
'?:([0-9]+)' + // port
'?' + ([^\s#]+)' + // path
'?:\\?([^\s#]*)' + // query
'?:#[^\s]*)' + // fragment
'$');

```

Splits a URI into its component parts. Each component can be accessed via the component indices; for example:

```

goog.uri.utils.split(someStr)[goog.uri.utils.ComponentIndex.QUERY_DATA];

```

The URI string to examine.

@return {?} Each component still URI-encoded. Each component that is present will contain the encoded value, whereas components that are not present will be undefined or empty, depending on the browser's regular expression implementation. Never null, since arbitrary strings may still look like path names.

```

function _split(uri) {
  return /** @type {?} */ ((uri.match(_splitRe)));
}

```

Removes dot segments in given path component, as described in RFC 3986, section 5.2.4.

@param {?} path A non-empty path component.

@return {?} Path component with removed dot segments.

```

function _removeDotSegments(path) {
  if (path == '/')
    return '/';
  var /** @type {?} */ leadingSlash = path[0] ==

```

\n * An
interface that a function passed into {@link forwardRef} has to implement.\n *
\n * ### Example\n *
\n *
{\\@example core/di/ts/forward_ref/forward_ref_spec.ts region='forward_ref_fn'}\n *
{\\@experimental\n *
@record\n *
\n * Allows to refer to references which are not yet defined.\n * For instance, `forwardRef`
is used when the `token` which we need to refer to for the purposes of\n * DI is declared,\n * but not yet defined. It
is also used when the `token` which we use when creating a query is not\n * yet defined.\n *
\n * ### Example\n *
\n *
{\\@example core/di/ts/forward_ref/forward_ref_spec.ts region='forward_ref'}\n *
{\\@experimental\n *
@param
?} forwardRefFn\n * @return ?\n *
function forwardRef(forwardRefFn) {\n  (** @type {?} */
(forwardRefFn)).__forward_ref__ = forwardRef;\n  (** @type {?} */ (forwardRefFn)).toString = function () {\n
return stringify(this());\n  };
\n  return (** @type {?} */ (** @type {?} */ (forwardRefFn)));\n}
\n * Lazily
retrieves the reference value from a forwardRef.\n * Acts as the identity function when given a non-forward-ref
value.\n *
\n * ### Example ([live demo](http://plnr.co/edit/GU72mJrk1fiodChcmiDR?p=preview))\n *
\n *
{\\@example core/di/ts/forward_ref/forward_ref_spec.ts region='resolve_forward_ref'}\n *
\n * See: {\\@link
forwardRef}\n *
{\\@experimental\n *
@param {?} type\n * @return ?\n *
function resolveForwardRef(type)
{\n  if (typeof type === 'function' && type.hasOwnProperty('__forward_ref__') &&\n    type.__forward_ref__
=== forwardRef) {\n    return (** @type {?} */ (type));\n  }\n  else {\n    return type;\n  }\n}

```

constructor dependencies.
 In typical use, application code asks for the dependencies in the constructor and they are resolved by the `Injector`.
 Example (live demo)(<http://plnr.co/edit/jzjec0?p=preview>)
 The following example creates an `Injector` configured to create `Engine` and `Car`.
 typescript

```

  @Injectable()
  class Engine {}
  @Injectable()
  class Car {
    constructor(public engine: Engine) {}
  }
  var injector = ReflectiveInjector.resolveAndCreate([Car, Engine]);
  var car = injector.get(Car);
  expect(car instanceof Car).toBe(true);
  expect(car.engine instanceof Engine).toBe(true);
  
```

 Notice, we don't use the `new` operator because we explicitly want to have the `Injector` resolve all of the object's dependencies automatically.
 @deprecated from v5 - slow and brings in a lot of code, Use `Injector.create` instead.

/** @class */ (function (_super) {\n __extends(ViewRef, _super);\n function ViewRef() {\n return _super
!== null && _super.apply(this, arguments) || this;\n }\n return ViewRef;\n})(ChangeDetectorRef);\n\n/**\n *
Represents an Angular View.\n *\n * <!-- TODO: move the next two paragraphs to the dev guide -->\n * A View is
a fundamental building block of the application UI. It is the smallest grouping of\n * Elements which are created and
destroyed together.\n *\n * Properties of elements in a View can change, but the structure (number and order) of
elements in\n * a View cannot. Changing the structure of Elements can only be done by inserting, moving or\n *
removing nested Views via a {@link ViewContainerRef}. Each View can contain many View Containers.\n * <!--
/TODO -->\n *\n * #### Example\n *\n * Given this template...\n *\n * ```\n * Count: {{items.length}}\n * \n *
<li *ngFor="let item of items">{{item}}\n * \n * ```\n *\n * We have two {@link TemplateRef}s:\n
*\n * Outer {@link TemplateRef}:\n * ```\n * Count: {{items.length}}\n * \n * <ng-template ngFor let-item
[ngForOf]="items"></ng-template>\n * \n * ```\n *\n * Inner {@link TemplateRef}:\n * ```\n *
{{item}}\n * ```\n *\n * Notice that the original template is broken down into two separate {@link
TemplateRef}s.\n *\n * The outer/inner {@link TemplateRef}s are then assembled into views like so:\n *\n * ```\n *
<!-- ViewRef: outer-0 -->\n * Count: 2\n * \n * <ng-template view-container-ref></ng-template>\n * <!--
ViewRef: inner-1 -->first<!-- /ViewRef: inner-1 -->\n * <!-- ViewRef: inner-2 -->second<!--
/ViewRef: inner-2 -->\n * \n * <!-- /ViewRef: outer-0 -->\n * ```\n * \n *\n * @experimental\n *
@abstract\n * ^\nvar EmbeddedViewRef = /** @class */ (function (_super) {\n __extends(EmbeddedViewRef, _super);\n
function EmbeddedViewRef() {\n return _super !== null && _super.apply(this, arguments) || this;\n }\n return
