It encodes inheritance, properties, and events.\n *\n * ## Overview\n *\n * Each line represents one kind of element. The `element_inheritance` and properties are joined using `element_inheritance|properties` syntax.\n *\n * ## Element Inheritance\n *\n * The `element_inheritance` can be further subdivided as `element1,element2,...^parentElement`.\n *\n * Here the individual elements are separated by `,` (commas). Every element in the list has identical properties.\n *\n * An `element` may inherit additional properties from `parentElement` If no `^parentElement` is specified then `""` (blank) element is assumed.\n *\n * NOTE: The blank element inherits from root `[Element]` element, the super element of all elements.\n *\n * NOTE an element prefix such as `:svg:` has no special meaning to the schema.\n *\n * ## Properties\n *\n * Each element has a set of properties separated by `,` (commas). Each property can be prefixed by a special character designating its type:\n *\n * - (no prefix): property is a string.\n *\n * - `*`: property represents an event.\n *\n * - `!`: property is a boolean.\n *\n * - `#`: property is a number.\n *\n * - `%`: property is an object.\n *\n * ## Query\n *\n * The class creates an internal squas representation which allows to easily answer the query of if a given property exist on a given element.\n *\n * NOTE: We don't yet support querying for types or events.\n *\n * NOTE: This schema is auto extracted from `schema_extractor.ts` located in the test folder, see `dom_element_schema_registry_spec.ts`\n *\n\nvar SCHEMA = [\n '[Element]|textContent,%classList,className,id,innerHTML,*beforecopy,*beforecut,*beforepaste,*copy,*cut,*paste,*search,*selectstart,*webkitfullscreenchange,*webkitfullscreenerror,*wheel,outerHTML,#scrollLeft,#scrollTop,scrollLeft',\n '*message,*mozfullscreenchange,*mozfullscreenerror,*mozpointerlockchange,*mozpointerlockerror,*webkitcontextcreationerror,*webkitcontextlost,*webkitcontextrestored',\n '[HTMLInputElement]^([Element])|accessKey,contentEditable,dir,!draggable,!hidden,innerText,lang,*abort,*auxclick,*blur,*cancel,*canplay,*canplaythrough,*change,*click,*close,*contextmenu,*cuechange,*dblclick,*drag,*dragend,*dragenter,*dragleave,*dragover,*dragstart,*drop,*durationchange,*emptied,*ended,*error,*focus,*gotpointercapture,*input,*invalid,*keydown,*keypress,*keyup,*load,*loadeddata,*loadedmetadata,*loadstart,*lostpointercapture,*mousedown,*mouseenter,*mouseleave,*mousemove,*mouseout,*mouseover,*mouseup,*mousewheel,*pause,*play,*playing,*pointercancel,*pointerdown,*pointerenter,*pointerleave,*pointermove,*pointerout,*pointerover,*pointerup,*progress,*ratechange,*reset,*resize,*scroll,*seeked,*seeking,*select,*show,*stalled,*submit,*suspend,*timeupdate,*toggle,*volumechange,*waiting,outerText,!spellcheck,%style,#tabIndex,title,!translate',\n

The goal is to allow users to avoid the most obvious pitfalls and do so without compromising performance significantly. For ShadowDOM styling that's not covered here, a set of best practices can be provided that should allow users to accomplish more complex styling.\n * The following is a list of specific ShadowDOM styling features and a brief discussion of the approach used to shim.\n * Shimmed features:\n * :host, :host-context: ShadowDOM allows styling of the shadowRoot's host element using the :host rule. To shim this feature, the :host styles are reformatted and prefixed with a given scope name and promoted to a document level stylesheet. For example, given a scope name of .foo, a rule like this:\n * :host {\n * background: red;\n * }\n * becomes:\n * .foo {\n * background: red;\n * }\n * encapsulation: Styles defined within ShadowDOM, apply only to dom inside the ShadowDOM. Polymer uses one of two techniques to implement this feature. By default, rules are prefixed with the host element tag name as a descendant selector. This ensures styling does not leak out of the 'top' of the element's ShadowDOM. For example,\n * div {\n * font-weight: bold;\n * }\n * becomes:\n * x-foo div {\n * font-weight: bold;\n * }\n * Alternatively, if WebComponents.ShadowCSS.strictStyling is set to true then selectors are scoped by adding an attribute selector suffix to each simple selector that contains the host element tag name. Each element in the element's ShadowDOM template is also given the scope attribute. Thus, these rules match only elements that have the scope attribute. For example, given a scope name of x-foo, a rule like this:\n * div {\n * font-weight: bold;\n * }\n * becomes:\n * div[x-foo] {\n * font-weight: bold;\n * }\n * Note that elements that are dynamically added to a scope must have the scope selector added to them manually.\n * upper/lower bound encapsulation: Styles which are defined outside a shadowRoot should not cross the ShadowDOM boundary and should not apply inside a shadowRoot. This styling behavior is not emulated. Some possible ways to do this that were rejected due to complexity and/or performance concerns include: (1) reset every possible property for every possible selector for a given scope name; (2) re-implement css in javascript. As an alternative, users should make sure to use selectors specific to the scope in which they are working.\n * ::distributed: This behavior is not emulated. It's often not necessary to style the contents of a specific insertion point and instead, descendants of the host element can be styled selectively. Users can also create an extra node around an insertion point and style that node's contents via descendent selectors. For example, with a shadowRoot like this:\n * <style>\n * ::content(div) {\n * background: red;\n * }\n * </style>\n * <content></content>\n * could become:\n * <style>\n * /*@polyfill .content-container div *\n * ::content(div) {\n * background: red;\n * }\n * </style>\n * <div class="content-container">\n * <content></content>\n * </div>\n * Note the use of @polyfill in the comment above a ShadowDOM specific style declaration. This is a directive to the styling shim to use the selector in comments in lieu of the next

```

```

/**\n
 * A regular expression for breaking a URI into its component parts.\n
 * \n
 * {\\@link
http://www.gbiv.com/protocols/uri/rfc/rfc3986.html#RFC2234} says\n
 * As the "first-match-wins" algorithm is
identical to the "greedy"\n
 * disambiguation method used by POSIX regular expressions, it is natural and\n
 *
commonplace to use a regular expression for parsing the potential five\n
 * components of a URI reference.\n
 * \n
 * The following line is the regular expression for breaking-down a\n
 * well-formed URI reference into its
components.\n
 * \n
 * <pre>\n
 * ^(([^:/?#]+):)?(//([^/?#]*))?(\\?([^#]*)?)(#(?:.)*?)?\n
 * 12 3 4 5
6 7 8 9\n
 * </pre>\n
 * \n
 * The numbers in the second line above are only to assist readability; they\n
 * indicate
the reference points for each subexpression (i.e., each paired\n
 * parenthesis). We refer to the value matched for
subexpression <n> as $<n>.\n
 * For example, matching the above expression to\n
 * <pre>\n
 * http://www.ics.uci.edu/pub/ietf/uri/#Related\n
 * </pre>\n
 * results in the following subexpression matches:\n
 *
<pre>\n
 * $1 = http:\n
 * $2 = http\n
 * $3 = //www.ics.uci.edu\n
 * $4 = www.ics.uci.edu\n
 * $5 =
/pub/ietf/uri\n
 * $6 = <undefined>\n
 * $7 = <undefined>\n
 * $8 = #Related\n
 * $9 = Related\n
 * </pre>\n
 *
where <undefined> indicates that the component is not present, as is the\n
 * case for the query component in the
above example. Therefore, we can\n
 * determine the value of the five components as\n
 * <pre>\n
 * scheme =
$2\n
 * authority = $4\n
 * path = $5\n
 * query = $7\n
 * fragment = $9\n
 * </pre>\n
 * \n
 * The regular
expression has been modified slightly to expose the\n
 * userInfo, domain, and port separately from the authority.\n
 * \n
 * The modified version yields\n
 * <pre>\n
 * $1 = http
scheme\n
 * $2 = <undefined> userInfo -\n
 *

```

```

$3 = www.ics.uci.edu domain | authority\n * $4 = <undefined> port -/\n * $5 = /pub/ietf/uri/ path\n *
$6 = <undefined> query without ?\n * $7 = Related fragment without #\n * </pre>\n * \\@internal\n

```

ensure that `wtfLeave` gets called can negatively impact the performance of your application. For this reason we recommend that you don't add them to ensure that `wtfLeave` gets called. In production `wtfLeave` is a noop so try-finally block has no value. When debugging perf issues, skipping `wtfLeave`, do an exception, will produce incorrect trace, but presence of exception signifies logic error which needs to be fixed before the app should be profiled. Add try-finally only when you expect that an exception is expected during normal execution while profiling.

```

Use by directives and components to emit custom Events.

Examples
In the following example, `Zippy` alternatively emits `open` and `close` events when its title gets clicked:

```

@Component({
  selector: 'zippy',
  template:
`<div class="zippy">
  <div (click)="toggle()">Toggle</div>
  <div [hidden]="!visible">
    <ng-content></ng-content>
  </div>
`})
export class Zippy {
  visible: boolean = true;
}
@Output() open: EventEmitter<any> = new EventEmitter();
@Output() close: EventEmitter<any> = new EventEmitter();
toggle() {
  this.visible = !this.visible;
  if (this.visible) {
    this.open.emit(null);
  } else {
    this.close.emit(null);
  }
}

```

The events payload can be accessed by the parameter `sevent` on the components output event handler:

```

<zippy (open)="onOpen($event)" (close)="onClose($event)"></zippy>

```

Uses Rx.Observable but provides an adapter to make it work as specified here: <https://github.com/jhusain/observable-spec>
Once a reference implementation of the spec is available, switch to it.

```

An injectable service for executing work inside or outside of the Angular zone.
The most common use of this service is to optimize performance when starting a work consisting of one or more asynchronous tasks that don't require UI updates or error handling to be handled by Angular. Such tasks can be kicked off via {@link #runOutsideAngular} and if needed, these tasks can reenter the Angular zone via {@link #run}.
- docs explaining zones and the use of zones in Angular and change-detection
- link to runOutsideAngular/run (throughout this file!)
### Example
import {Component, NgZone} from '@angular/core';
import {NgIf} from '@angular/common';
@Component({
  selector: 'ng-zone-demo',
  template: `
    <h2>Demo: NgZone</h2>
    <p>Progress: {{progress}}%</p>
    <p *ngIf="progress >= 100">Done processing {{label}} of Angular zone!</p>
    <button (click)="processWithinAngularZone()">Process within Angular zone</button>
    <button (click)="processOutsideOfAngularZone()">Process outside of Angular zone</button>
  `
})
export class NgZoneDemo {
  progress: number = 0;
  label: string;
  constructor(private _ngZone: NgZone) {}
  // Loop inside the Angular zone
  // so the UI DOES refresh after each setTimeout cycle
  processWithinAngularZone() {
    this.label = 'inside';
    this.progress = 0;
    this._increaseProgress(() => console.log('Inside Done!'));
  }
  // Loop outside of the Angular zone
  // so the UI DOES NOT refresh after each setTimeout cycle
  processOutsideOfAngularZone() {
    this.label = 'outside';
    this.progress = 0;
    this._ngZone.runOutsideAngular(() => {
      this._increaseProgress(() => {
        // reenter the Angular zone and display done
        this._ngZone.run(() => {
          console.log('Outside Done!');
        });
      });
    });
  }
  _increaseProgress(doneCallback: () => void) {
    this.progress += 1;
    console.log(`Current progress: ${this.progress}%`);
    if (this.progress < 100) {
      window.setTimeout(() => this._increaseProgress(doneCallback), 10);
    } else {
      doneCallback();
    }
  }
}

An unmodifiable list of items that Angular keeps up to date when the state of the application changes.
The type of object that `@@link ViewChildren`, `@@link ContentChildren`, and `@@link QueryList` provide.
Implements an iterable interface, therefore it can be used in both ES6 javascript `for (var i of items)` loops as well as in Angular templates with `*ngFor="let i of myList"`.
Changes can be observed by subscribing to the changes `Observable`.
NOTE: In the future this class will implement an `Observable` interface.

Example ([live demo](http://plnkr.co/edit/RX8sJnQYI9FWuSCWme5z?p=preview))

```

typescript
@Component({...})
class Container {
  @@ViewChildren(Item) items: QueryList<Item>;
}

```

```

 // Given a directive type, this function returns the bit in an injector's bloom filter that should be used to
 // determine whether or not the directive is present. When the directive was added to the bloom filter, it was
 // given a unique ID that can be retrieved on the class. Since there are only BLOOM_SIZE slots per bloom filter,
 // the directive's ID must be modulo-ed by BLOOM_SIZE to get the correct bloom bit (directives share slots after
 // BLOOM_SIZE is reached).
 * @param {?} type The directive type
 * @return {?} The bloom bit to check for the directive
 */
function bloomHashBit(type) {
 var id = /** @type {?} */ id = /** @type {?} */ (type)[NG_ELEMENT_ID];
 return typeof id === 'number' ? id % BLOOM_SIZE : null;
}

Finds the closest injector that might have a certain directive. Each directive corresponds to a bit in an injector's bloom filter. Given the bloom bit to check and a starting injector, this function traverses up injectors until it finds an injector that contains a 1 for that bit in its bloom filter. A 1 indicates that the injector may have that directive. It only may have the directive because directives begin to share bloom filter bits after the BLOOM_SIZE is reached, and it could correspond to a different directive sharing the bit.
Note: We can skip checking further injectors up the tree if an injector's cbf structure has a 0 for that bloom bit. Since cbf contains the merged value of all the parent injectors, a 0 in the bloom bit indicates that the parents definitely do not contain the directive and do not need to be checked.
 * @param {?} startInjector
 * @param {?} bloomBit The bit to check in each injector's bloom filter
 * @return {?} An injector that might have the directive
 */

```

`[\@myAnimationTrigger]="myStatusExp">...</div>`

**## Disable Animations**

A special animation control binding called `[\@.disabled]` can be placed on an element which will then disable animations for any inner animation triggers situated within the element as well as any animations on the element itself.

When true, the `[\@.disabled]` binding will prevent all animations from rendering. The example below shows how to use this feature:

```

<div [\@.disabled]="isDisabled">
 <div [\@childAnimation]="exp"></div>
</div>

```

The `[\@childAnimation]` trigger will not animate because `[\@.disabled]` prevents it from happening (when true). Note that `[\@.disabled]` will only disable all animations (this means any animations running on the same element will also be disabled).

**Disabling Animations Application-wide**

When an area of the template is set to have animations disabled, **all** inner components will also have their animations disabled as well. This means that all animations for an angular application can be disabled by placing a host binding set on `[\@.disabled]` on the topmost Angular component.

```

import {Component, HostBinding} from '@angular/core';
@Component({
 selector: 'app-component',
 templateUrl: 'app.component.html'
})
class AppComponent {
 [\@HostBinding('[\@.disabled]')]
 public animationsDisabled = true;
}

```

**What about animations that us `query()` and `animateChild()`?**

Despite inner animations being disabled, a parent animation can `{[\@link query query]}` for inner elements located in disabled areas of the template and still animate them as it sees fit. This is also the case for when a sub animation is queried by a parent and then later animated using `{[\@link animateChild animateChild]}`.

**Experimental Animation support is experimental.**

**@param {?} name @param {?} definitions @return {?}**

```

function trigger$(name, definitions) {
 return {
 type: 7 /* Trigger */,
 name: name,
 definitions: definitions,
 options: {}
 };
}

```

**animate** is an animation-specific function that is designed to be used inside of Angular's animation DSL language. If this information is new, please navigate to the [Component#animations component animations metadata page](#) to gain a better understanding of how animations in Angular are used.

**animate** specifies an animation step that will apply the provided `styles` data for a given amount of time based on the provided `timing` expression value. Calls to `animate` are expected to be used within `{[\@link sequence an animation sequence]}`, `{[\@link group group]}`, or `{[\@link transition transition]}`.

**Usage**

The `animate` function accepts two input parameters: `timing` and `styles`:

- `timing` is a string based value that can be a combination of a duration with optional delay and easing values. The format for the expression breaks down to `duration delay easing` (therefore a value such as `1s 100ms ease-out` will be parse itself into `duration=1000, delay=100, easing=ease-out`). If a numeric value is provided then that will be used as the `duration` value in millisecond form.
- `styles` is the style input data which can either be a call to `{[\@link style style]}` or `{[\@link keyframes keyframes]}`. If left empty then the styles from the destination state will be collected and used (this is useful when describing an animation step that will complete an animation by `{[\@link transition#the-final-animate-call animating to the final state]}`).

**typescript** // various functions for specifying timing data

```

animate(500, style(...))
animate("1s", style(...))
animate("100ms 0.5s", style(...))
animate("5s ease", style(...))
animate("5s 10ms cubic-bezier(.17,.67,.88,.1)", style(...))

```

either `style()` or `keyframes()` can be used

```

animate(500, style({ background: "red" }))
animate(500, keyframes([
 style({ background: "blue" }),
 style({ background: "red" })
]))

```

**example**

```

core/animation/ts/dsl/animation_example.ts
region='Component'
[\@experimental Animation support is experimental]
@param {?} timings
@param {=} styles
@return {?}
function animate$(timings, styles) {
 if (styles === void 0) {
 styles = null;
 }
 return {
 type: 4 /* Animate */,
 styles: styles,
 timings: timings
 };
}

```

**group** is an animation-specific function that is designed to be used inside of Angular's animation DSL language. If this information is new, please navigate to the [Component#animations component animations metadata page](#) to gain a better understanding of how animations in Angular are used.

**group** specifies a list of animation steps that are all run in parallel. Grouped animations are useful when a series of styles must be animated/closed off at different starting/ending times.

The `group` function can either be

used within a `{@link sequence}` or a `{@link transition}` and it will only continue to the next instruction once all of the inner animation steps have completed.

**Usage**

The `steps` data that is passed into the `group` animation function can either consist of `{@link style}` or `{@link animate}` function calls. Each call to `style()` or `animate()` within a group will be executed instantly (use `{@link keyframes}` or a `{@link animate#usage}` with a delay value) to offset styles to be applied at a later time).

```

typescript
group([
 animate("1s", { background: "black" })
 animate("2s", { color: "white" })
])

```

**Example** `core/animation/ts/dsl/animation_example.ts` `region='Component'`

**Experimental** Animation support is experimental.

**@param** `{?}` `steps`

**@param** `{?}` `options`

**@return** `{?}`

```

function group$1(steps, options) {
 if (options === void 0) {
 options = null;
 }
 return { type: 3 /* Group */, steps: steps, options: options };
}

```

`sequence` is an animation-specific function that is designed to be used inside of Angular's animation DSL language. If this information is new, please navigate to the `Component#animations` component animations metadata page to gain a better understanding of how animations in Angular are used.

`sequence` Specifies a list of animation steps that are run one by one. (`sequence` is used by default when an array is passed as animation data into `{@link transition}`.)

The `sequence` function can either be used within a `{@link group}` or a `{@link transition}` and it will only continue to the next instruction once each of the inner animation steps have completed.

To perform animation styling in parallel with other animation steps then have a look at the `{@link group}` animation function.

**Usage**

The `steps` data that is passed into the `sequence` animation function can either consist of `{@link style}` or `{@link animate}` function calls. A call to `style()` will apply the provided styling data immediately while a call to `animate()` will apply its styling data over a given time depending on its timing data.

```

typescript
sequence([
 style({ opacity: 0 })
 animate("1s", { opacity: 1 })
])

```

**Example** `core/animation/ts/dsl/animation_example.ts` `region='Component'`

**Experimental** Animation support is experimental.

**@param** `{?}` `steps`

**@param** `{?}` `options`

**@return** `{?}`

```

function sequence$1(steps, options) {
 if (options === void 0) {
 options = null;
 }
 return { type: 2 /* Sequence */, steps: steps, options: options };
}

```

`style` is an animation-specific function that is designed to be used inside of Angular's animation DSL language. If this information is new, please navigate to the `Component#animations` component animations metadata page to gain a better understanding of how animations in Angular are used.

`style` declares a key/value object containing CSS properties/styles that can then be used for `{@link state}` animation states, within an `{@link sequence}` animation sequence, or as styling data for both `{@link animate}` and `{@link keyframes}`.

**Usage**

`style` takes in a key/value string map as data and expects one or more CSS property/value pairs to be defined.

```

typescript
// string values are used for css properties
style({ background: "red", color: "blue" })
// numerical (pixel) values are also supported
style({ width: 100, height: 0 })

```

**Auto-styles (using `*`)**

When an asterisk (`*`) character is used as a value then it will be detected from the element being animated and applied as animation data when the animation starts.

This feature proves useful for a state depending on layout and/or environment factors; in such cases the styles are calculated just before the animation starts.

```

typescript
// the steps below will animate from 0 to the // actual height of the element
style({ height: 0 })
animate("1s", style({ height: "*" }))

```

**Example** `core/animation/ts/dsl/animation_example.ts` `region='Component'`

**Experimental** Animation support is experimental.

**@param** `{?}` `tokens`

**@return** `{?}`

```

function style$1(tokens) {
 return { type: 6 /* Style */, styles: tokens, offset: null };
}

```

`state` is an animation-specific function that is designed to be used inside of Angular's animation DSL language. If this information is new, please navigate to the `Component#animations` component animations metadata page to gain a better understanding of how animations in Angular are used.

`state` declares an animation state within the given trigger. When a state is active within a component then its associated styles will persist on the element that the trigger is attached to (even when the animation ends).

To animate between states, have a look at the `{@link transition}` DSL function. To register states to an animation trigger please have a look at the `{@link trigger}`

```

*function transition$(stateChangeExpr, steps, options) {
 if (options === void 0) { options = null; }
 return {
 type: 1 /* Transition */,
 expr: stateChangeExpr,
 animation: steps,
 options: options
 };
}

```

`animation` is an animation-specific function that is designed to be used inside of Angular's animation DSL language. `var myAnimation = animation(...)` is designed to produce a reusable animation that can be later invoked in another animation or sequence. Reusable animations are designed to make use of animation parameters and the produced animation can be used via the `useAnimation` method.

```

var fadeAnimation = animation([
 style({ opacity: '0' }),
 animate('{{ time }}', style({ opacity: '1' })),
 { params: { time: '1000ms', start: 0, end: 1 }}
]);

```

If parameters are attached to an animation then they act as **default parameter values**. When an animation is invoked via `useAnimation` then parameter values are allowed to be passed in directly. If any of the passed in parameter values are missing then the default values will be used.

```

useAnimation(fadeAnimation, {
 params: {
 time: '2s',
 start: 1,
 end: 0
 }
})

```

If one or more parameter values are missing before animated then an error will be thrown.

**@experimental Animation support is experimental.**

```

@param {?} steps
@param {?=} options
@return {?}

```

`animateChild` is an animation-specific function that is designed to be used inside of Angular's animation DSL language. It works by allowing a queried element to execute its own animation within the animation sequence. Each time an animation is triggered in angular, the parent animation will always get priority and any child animations will be blocked. In order for a child animation to run, the parent animation must query each of the elements containing child animations and then allow the animations to run using `animateChild`.

The example HTML code below shows both parent and child elements that have animation triggers that will execute at the same time.

```

<!-- parent-child.component.html -->
<button (click)="exp = ! exp">Toggle</button>
<div [!@parentAnimation]="exp">
 <header>Hello</header>
 <div [!@childAnimation]="exp">
 one
 </div>
 <div [!@childAnimation]="exp">
 two
 </div>
 <div [!@childAnimation]="exp">
 three
 </div>
</div>

```

Now when the `exp` value changes to true, only the `parentAnimation` animation will animate because it has priority. However, using `query` and `animateChild` each of the inner animations can also fire:

```

ts
// parent-child.component.ts
import { trigger, transition, animate, style, query, animateChild } from '@angular/animations';
@Component({
 selector: 'parent-child-component',
 animations: [
 trigger('parentAnimation', [
 transition('false => true', [
 query('header', [
 style({ opacity: 0 }),
 animate(500, style({ opacity: 1 })),
]),
 query('@childAnimation', [
 animateChild(),
]),
 trigger('childAnimation', [
 transition('false => true', [
 style({ opacity: 0 }),
 animate(500, style({ opacity: 1 })),
]),
]),
]),
],
),
 class: ParentChildCmp {
 exp: boolean = false;
 }
})

```

In the animation code above, when the `parentAnimation` transition kicks off it first queries to find the header element and fades it in. It then finds each of the sub elements that contain the `@childAnimation` trigger and then allows for their animations to fire.

This example can be further extended by using stagger:

```

ts
query('@childAnimation',
stagger(100, [
 animateChild()
]))

```

Now each of the sub animations start off with respect to the `100ms` staggering step.

**## The first frame of child animations**

When sub animations are executed using `animateChild` the animation engine will always apply the first frame of every sub animation immediately at the start of the animation sequence. This way the parent animation does not need to set any initial styling data on the sub elements before the sub animations kick off.

In the example above the first frame of the `childAnimation`'s `false => true` transition consists of a style of `opacity: 0`. This is applied immediately when the `parentAnimation` animation transition sequence starts. Only then when the `@childAnimation` is queried and called with `animateChild` will it then animate to its destination of `opacity: 1`.

Note that this feature designed to be used alongside `@link query query()` and it will only work with animations that are assigned using the Angular animation DSL (this means that CSS keyframes and transitions are not handled by this API).

```

```

`\\@stable` \* `@record` \* `^` \* `\\` \* Marker interface for a value that's safe to use as HTML. `\\@stable` \* `@record` \* `^` \* `\\` \* Marker interface for a value that's safe to use as style (CSS). `\\@stable` \* `@record` \* `^` \* `\\` \* Marker interface for a value that's safe to use as JavaScript. `\\@stable` \* `@record` \* `^` \* `\\` \* Marker interface for a value that's safe to use as a URL linking to a document. `\\@stable` \* `@record` \* `^` \* `\\` \* Marker interface for a value that's safe to use as a URL to load executable code from. `\\@stable` \* `@record` \* `^` \* `\\` \* `DomSanitizer` helps preventing Cross Site Scripting Security bugs (XSS) by sanitizing values to be safe to use in the different DOM contexts. For example, when binding a URL in an `<a [href]="someValue">` hyperlink, `someValue` will be sanitized so that an attacker cannot inject e.g. a `javascript:` URL that would execute code on the website. In specific situations, it might be necessary to disable sanitization, for example if the application genuinely needs to produce a `javascript:` style link with a dynamic value in it. Users can bypass security by constructing a value with one of the `bypassSecurityTrust...` methods, and then binding to that value from the template. These situations should be very rare, and extraordinary care must be taken to avoid creating a Cross Site Scripting (XSS) security bug! When using `bypassSecurityTrust...`, make sure to call the method as early as possible and as close as possible to the source of the value, to make it easy to verify no security bug is created by its use. It is not required (and not recommended) to bypass security if the value is safe, e.g. a URL that does not start with a suspicious protocol, or an HTML snippet that does not contain dangerous code. The sanitizer leaves safe values intact.

`\\@security` Calling any of the `bypassSecurityTrust...` APIs disables Angular's built-in sanitization for the value passed in. Carefully check and audit all values and code paths going into this call. Make sure any user data is appropriately escaped for this security context. For more detail, see the [Security Guide](http://g.co/ng/security).

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
  - (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
  - (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
  - (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
  - (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not

pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special,

incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

## END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache Groovy is an effort undergoing incubation at The Apache Software  
Foundation (ASF) sponsored by the Apache Incubator PMC. Incubation is required

of all newly accepted projects until a further review indicates that the infrastructure, communications, and decision making process have stabilized in a manner consistent with other successful ASF projects. While incubation status is not necessarily a reflection of the completeness or stability of the code, it does indicate that the project has yet to be fully endorsed by the ASF.

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the

editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the

Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

## END OF TERMS AND CONDITIONS

### APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the

same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License");  
you may not use this file except in compliance with the License.  
You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. See the License for the specific language governing permissions and limitations under the License.

-----

#### ANTLR 2 License

Antlr2 is released in the public domain.  
See licenses/antlr2-license.txt for details.

-----

#### ASM 4 License

ASM 4 uses a 3-clause BSD license. For details, see licenses/asm-license.txt.

-----

#### JLine2 Patch License

The following class within this product:

`org.codehaus.groovy.tools.shell.completion.FileNameCompleter`

was derived from JLine 2.12, and the following patch:

<https://github.com/jline/jline2/issues/90>

JLine2 is made available under a BSD License.

For details, see licenses/jline2-license.

-----

#### JSR223 License

The following classes within this product:

org.codehaus.groovy.jsr223.GroovyCompiledScript  
org.codehaus.groovy.jsr223.GroovyScriptEngineFactory  
org.codehaus.groovy.jsr223.GroovyScriptEngineImpl

were derived from reference implementation files developed by Sun in collaboration with the Groovy community. The reference implementation has a BSD-style license. Details can be found in: licenses/jsr223-license.txt

-----  
normalize.css License

The stylesheet.css file (originally normalize.css) is used by the groovydoc and docgenerator components for groovy-jdk/gapi documentation. It is made available under a MIT License. Details: licenses/normalize-stylesheet-license.txt

ASM 4 License

ANTLR 2 License

We reserve no legal rights to the ANTLR--it is fully in the public domain. An individual or company may do whatever they wish with source code distributed with ANTLR or the code generated by ANTLR, including the incorporation of ANTLR, or its output, into commercial software.

We encourage users to develop software with ANTLR. However, we do ask that credit is given to us for developing ANTLR. By "credit", we mean that if you use ANTLR or incorporate any source code into one of your programs (commercial product, research project, or otherwise) that you acknowledge this fact somewhere in the documentation, research report, etc... If you like ANTLR and have developed a nice tool with the output, please mention that you developed it using ANTLR. In addition, we ask that the headers remain intact in our source code. As long as these guidelines are kept, we expect to continue enhancing this system and expect to make other tools available as they are completed.

In countries where the Public Domain status of the work may not be valid, the author grants a copyright licence to the general public to deal in the work without restriction and permission to sublicense derivatives under the terms of any (OSI approved) Open Source licence.

The Python parser generator code under antlr/actions/python/ is covered by the 3-clause BSD licence (this part is included in the binary JAR files); the run-time part under lib/python/ is covered by the GNU GPL, version 3 or later (this part is not included in the binary JAR files). See [1] for the full details.

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

# 1.167 xz-java 1.5

## 1.167.1 Available under license :

No license file was found, but licenses were detected in source scan.

```
/*
 * DeltaOutputStream
 *
 * Author: Lasse Collin <lasse.collin@tukaani.org>
 *
 * This file has been put into the public domain.
 * You can do whatever you want with this file.
 */
```

Found in path(s):

```
* /opt/cola/permits/1021437194_1611277404.24/0/xz-1-5-sources-jar/org/tukaani/xz/DeltaOutputStream.java
```

No license file was found, but licenses were detected in source scan.

```
/**
 * XZ data compression support.
 *
 * <h4>Introduction</h4>
 * <p>
 * This aims to be a complete implementation of XZ data compression
```

```

* in pure Java. Features:
*
* Full support for the .xz file format specification version 1.0.4
* Single-threaded streamed compression and decompression
* Single-threaded decompression with limited random access support
* Raw streams (no .xz headers) for advanced users, including LZMA2
* with preset dictionary
*
* <p>
* Threading is planned but it is unknown when it will be implemented.
* <p>
* For the latest source code, see the
* home page of XZ for Java.
*
* <h4>Getting started</h4>
* <p>
* Start by reading the documentation of { @link org.tukaani.xz.XZOutputStream}
* and { @link org.tukaani.xz.XZInputStream}.
* If you use XZ inside another file format or protocol,
* see also { @link org.tukaani.xz.SingleXZInputStream}.
*
* <h4>Licensing</h4>
* <p>
* XZ for Java has been put into the public domain, thus you can do
* whatever you want with it. All the files in the package have been
* written by Lasse Collin and/or Igor Pavlov.
* <p>
* This software is provided "as is", without any warranty.
*/

```

Found in path(s):

## 1.170 angular 1.2.28

### 1.170.1 Available under license :

No license file was found, but licenses were detected in source scan.

```
packaged angular
```

This repo is for distribution on `npm` and `bower`. The source for this module is in the [main AngularJS repo](<https://github.com/angular/angular.js>).

Please file issues and pull requests against that repo.

```
Install
```

You can install this package either with `npm` or with `bower`.

```
npm
```

```
```shell  
npm install angular  
```
```

Then add a ``<script>`` to your `index.html`:

```
```html  
<script src="/node_modules/angular/angular.js"></script>  
```
```

Note that this package is not in CommonJS format, so doing `require('angular')` will return `undefined`. If you're using [Browserify](https://github.com/substack/node-browserify), you can use [exposify](https://github.com/thlorenz/exposify) to have `require('angular')` return the `angular` global.

```
bower
```

```
```shell  
bower install angular  
```
```

Then add a ``<script>`` to your `index.html`:

```
```html  
<script src="/bower_components/angular/angular.js"></script>  
```
```

```
Documentation
```

Documentation is available on the [AngularJS docs site](http://docs.angularjs.org/).

```
License
```

\*

\* Strict Contextual Escaping (SCE) is a mode in which AngularJS requires bindings in certain

\* contexts to result in a value that is marked as safe to use for that context. One example of

\* such a context is binding arbitrary html controlled by the user via `ng-bind-html`. We refer

\* to these contexts as privileged or SCE contexts.

\*

\* As of version 1.2, Angular ships with SCE enabled by default.

\*

\* Note: When enabled (the default), IE8 in quirks mode is not supported. In this mode, IE8 allows  
\* one to execute arbitrary javascript by the use of the expression() syntax. Refer  
\* <<http://blogs.msdn.com/b/ie/archive/2008/10/16/ending-expressions.aspx>> to learn more about them.  
\* You can ensure your document is in standards mode and not quirks mode by adding `<!doctype html`  
\* to the top of your HTML document.

\*

\* SCE assists in writing code in way that (a) is secure by default and (b) makes auditing for  
\* security vulnerabilities such as XSS, clickjacking, etc. a lot easier.

\*

\* Here's an example of a binding in a privileged context:

\*

\* ```

```
* <input ng-model="userHtml">
* <div ng-bind-html="userHtml"></div>
```

\* ```

\*

\* Notice that `ng-bind-html` is bound to `userHtml` controlled by the user. With SCE  
\* disabled, this application allows the user to render arbitrary HTML into the DIV.  
\* In a more realistic example, one may be rendering user comments, blog articles, etc. via  
\* bindings. (HTML is just one example of a context where rendering user controlled input creates  
\* security vulnerabilities.)

\*

\* For the case of HTML, you might use a library, either on the client side, or on the server side,  
\* to sanitize unsafe HTML before binding to the value and rendering it in the document.

\*

\* How would you ensure that every place that used these types of bindings was bound to a value that  
\* was sanitized by your library (or returned as safe for rendering by your server?) How can you  
\* ensure that you didn't accidentally delete the line that sanitized the value, or renamed some  
\* properties/fields and forgot to update the binding to the sanitized value?

\*

\* To be secure by default, you want to ensure that any such bindings are disallowed unless you can  
\* determine that something explicitly says it's safe to use a value for binding in that  
\* context. You can then audit your code (a simple grep would do) to ensure that this is only done  
\* for those values that you can easily tell are safe - because they were received from your server,  
\* sanitized by your library, etc. You can organize your codebase to help with this - perhaps  
\* allowing only the files in a specific directory to do this. Ensuring that the internal API  
\* exposed by that code doesn't markup arbitrary values as safe then becomes a more manageable task.

\*

\* In the case of AngularJS' SCE service, one uses { @link ng.\$sce#trustAs \$sce.trustAs }  
\* (and shorthand methods such as { @link ng.\$sce#trustAsHtml \$sce.trustAsHtml }, etc.) to  
\* obtain values that will be accepted by SCE / privileged contexts.

\*

\*

\* ## How does it work?

\*

\* In privileged contexts, directives and code will bind to the result of { @link ng.\$sce#getTrusted  
\* \$sce.getTrusted(context, value) } rather than to the value directly. Directives use { @link  
\* ng.\$sce#parse \$sce.parseAs } rather than `parse` to watch attribute bindings, which performs the

```

* { @link ng.$sce#getTrusted $sce.getTrusted } behind the scenes on non-constant literals.
*
* As an example, { @link ng.directive:ngBindHtml ngBindHtml } uses { @link
* ng.$sce#parseAsHtml $sce.parseAsHtml(binding expression) }. Here's the actual code (slightly
* simplified):
*
* ```
* var ngBindHtmlDirective = ['$sce', function($sce) {
* return function(scope, element, attr) {
* scope.$watch($sce.parseAsHtml(attr.ngBindHtml), function(value) {
* element.html(value || "");
* });
* };
* }];
* ```
*
* ## Impact on loading templates
*
* This applies both to the { @link ng.directive:ngInclude `ng-include` } directive as well as
* `templateUrl`'s specified by { @link guide/directive directives }.
*
* By default, Angular only loads templates from the same domain and protocol as the application
* document. This is done by calling { @link ng.$sce#getTrustedResourceUrl
* $sce.getTrustedResourceUrl } on the template URL. To load templates from other domains and/or
* protocols, you may either either { @link ng.$sceDelegateProvider#resourceUrlWhitelist whitelist
* them } or { @link ng.$sce#trustAsResourceUrl wrap it } into a trusted value.
*
* *Please note*:
*
* The browser's
* [Same Origin Policy](https://code.google.com/p/browsersec/wiki/Part2#Same-origin_policy_for_XMLHttpRequest)
* and [Cross-Origin Resource Sharing (CORS)](http://www.w3.org/TR/cors/)
* policy apply in addition to this and may further restrict whether the template is successfully
* loaded. This means that without the right CORS policy, loading templates from a different domain
* won't work on all browsers. Also, loading templates from `file://` URL does not work on some
* browsers.
*
* ## This feels like too much overhead for the developer?
*
* It's important to remember that SCE only applies to interpolation expressions.
*
* If your expressions are constant literals, they're automatically trusted and you don't need to
* call ` $sce.trustAs ` on them (remember to include the `ngSanitize` module) (e.g.
* `

Open Source Used In Appdynamics_JS_Agent 23.8.0 2317

```

\* The included { @link ng.\$sceDelegate \$sceDelegate } comes with sane defaults to allow you to load templates in `ng-include` from your application's domain without having to even know about SCE. It blocks loading templates from other domains or loading templates over http from an https served document. You can change these by setting your own custom { @link ng.\$sceDelegateProvider#resourceUrlWhitelist whitelists } and { @link ng.\$sceDelegateProvider#resourceUrlBlacklist blacklists } for matching such URLs.

\* This significantly reduces the overhead. It is far easier to pay the small overhead and have an application that's secure and can be audited to verify that with much more ease than bolting security onto an application later.

\* <a name="contexts"></a>

\* ## What trusted context types are supported?

| Context              | Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| `\$sce.HTML`         | For HTML that's safe to source into the application. The { @link ng.directive:ngBindHtml ngBindHtml } directive uses this context for bindings. If an unsafe value is encountered and the { @link ngSanitize \$sanitize } module is present this will sanitize the value instead of throwing an error.                                                                                                                                                                                       |
| `\$sce.CSS`          | For CSS that's safe to source into the application. Currently unused. Feel free to use it in your own directives.                                                                                                                                                                                                                                                                                                                                                                            |
| `\$sce.URL`          | For URLs that are safe to follow as links. Currently unused ( `<a href=` and `<img src=` sanitize their urls and don't constitute an SCE context.                                                                                                                                                                                                                                                                                                                                            |
| `\$sce.RESOURCE_URL` | For URLs that are not only safe to follow as links, but whose contents are also safe to include in your application. Examples include `ng-include`, `src` / `ngSrc` bindings for tags other than `IMG` (e.g. `IFRAME`, `OBJECT`, etc.) <br><br>Note that `\$sce.RESOURCE_URL` makes a stronger statement about the URL than `\$sce.URL` does and therefore contexts requiring values trusted for `\$sce.RESOURCE_URL` can be used anywhere that values trusted for `\$sce.URL` are required. |
| `\$sce.JS`           | For JavaScript that is safe to execute in your application's context. Currently unused. Feel free to use it in your own directives.                                                                                                                                                                                                                                                                                                                                                          |

\* ## Format of items in { @link ng.\$sceDelegateProvider#resourceUrlWhitelist resourceUrlWhitelist }/{ @link ng.\$sceDelegateProvider#resourceUrlBlacklist Blacklist } <a name="resourceUrlPatternItem"></a>

\* Each element in these arrays must be one of the following:

\* - **'self'**

\* - The special **string**, **'self'**, can be used to match against all URLs of the **same domain** as the application document using the **same protocol**.

\* - **String** (except the special value **'self'**)

\* - The string is matched against the full **normalized / absolute URL** of the resource being tested (substring matches are not good enough.)

\* - There are exactly **two wildcard sequences** - **'\*'** and **'\*\*'**. All other characters match themselves.

\* - **'\*'**: matches zero or more occurrences of any character other than one of the following 6 characters: **':'**, **"/**, **','**, **'?'**, **'&'** and **'|'**. It's a useful wildcard for use in a whitelist.

\* - **'\*\*'**: matches zero or more occurrences of **any** character. As such, it's not

\* not appropriate to use in for a scheme, domain, etc. as it would match too much. (e.g.  
 \* `http://*.example.com/` would match `http://evil.com/?ignore=.example.com/` and that might  
 \* not have been the intention.) Its usage at the very end of the path is ok. (e.g.  
 \* `http://foo.example.com/templates/`).

\* - **RegExp** (\*see caveat below\*)

\* - **Caveat**: While regular expressions are powerful and offer great flexibility, their syntax  
 \* (and all the inevitable escaping) makes them *harder to maintain*. It's easy to  
 \* accidentally introduce a bug when one updates a complex expression (imho, all regexes should  
 \* have good test coverage.). For instance, the use of ``` in the regex is correct only in a  
 \* small number of cases. A ``` character in the regex used when matching the scheme or a  
 \* subdomain could be matched against a ``` or literal ``` that was likely not intended. It  
 \* is highly recommended to use the string patterns and only fall back to regular expressions  
 \* if they as a last resort.

\* - The regular expression must be an instance of `RegExp` (i.e. not a string.) It is  
 \* matched against the *entire* *normalized / absolute URL* of the resource being tested  
 \* (even when the `RegExp` did not have the `^`` and `$`` codes.) In addition, any flags  
 \* present on the `RegExp` (such as `multiline`, `global`, `ignoreCase`) are ignored.

\* - If you are generating your JavaScript from some other templating engine (not  
 \* recommended, e.g. in issue [#4006](https://github.com/angular/angular.js/issues/4006)),  
 \* remember to escape your regular expression (and be aware that you might need more than  
 \* one level of escaping depending on your templating engine and the way you interpolated  
 \* the value.) Do make use of your platform's escaping mechanism as it might be good  
 \* enough before coding your own. e.g. Ruby has  
 \* `[Regexp.escape(str)]`(<http://www.ruby-doc.org/core-2.0.0/Regexp.html#method-c-escape>)  
 \* and Python has `[re.escape]`(<http://docs.python.org/library/re.html#re.escape>).  
 \* Javascript lacks a similar built in function for escaping. Take a look at Google  
 \* Closure library's `[goog.string.regExpEscape(s)]`(  
 \* [http://docs.closure-library.googlecode.com/git/closure\\_goog\\_string\\_string.js.source.html#line962](http://docs.closure-library.googlecode.com/git/closure_goog_string_string.js.source.html#line962)).

\*  
 \* Refer `{ @link ng.$sceDelegateProvider $sceDelegateProvider }` for an example.

\*  
 \* **## Show me an example using SCE.**

\*  
 \* `<example module="mySceApp" deps="angular-sanitize.js">`  
 \* `<file name="index.html">`  
 \* `<div ng-controller="myAppController as myCtrl">`  
 \* `<i ng-bind-html="myCtrl.explicitlyTrustedHtml" id="explicitlyTrustedHtml"></i><br><br>`  
 \* `<b>User comments</b><br>`  
 \* By default, HTML that isn't explicitly trusted (e.g. Alice's comment) is sanitized when  
 \* `$sanitize` is available. If `$sanitize` isn't available, this results in an error instead of an  
 \* exploit.  
 \* `<div class="well">`  
 \* `<div ng-repeat="userComment in myCtrl.userComments">`  
 \* `<b>{{ userComment.name }}</b>:`  
 \* `<span ng-bind-html="userComment.htmlComment" class="htmlComment"></span>`  
 \* `<br>`  
 \* `</div>`  
 \* `</div>`

```

* </div>
* </file>
*
* <file name="script.js">
* var mySceApp = angular.module('mySceApp', ['ngSanitize']);
*
* mySceApp.controller("myAppController", function myAppController($http, $templateCache, $sce) {
* var self = this;
* $http.get("test_data.json", {cache: $templateCache}).success(function(userComments) {
* self.userComments = userComments;
* });
* self.explicitlyTrustedHtml = $sce.trustAsHtml(
* '<span onmouseover="this.textContent="Explicitly trusted HTML bypasses ' +
* 'sanitization."">Hover over this text.');
* });
* </file>
*
* <file name="test_data.json">
* [
* { "name": "Alice",
* "htmlComment":
* "Is <i>anyone</i> reading this?"
* },
* { "name": "Bob",
* "htmlComment": "<i>Yes!</i> Am I the only other one?"
* }
*]
* </file>
*
* <file name="protractor.js" type="protractor">
* describe('SCE doc demo', function() {
* it('should sanitize untrusted values', function() {
* expect(element.all(by.css('.htmlComment')).first().getInnerHtml())
* .toBe('Is <i>anyone</i> reading this?');
* });
*
* it('should NOT sanitize explicitly trusted values', function() {
* expect(element(by.id('explicitlyTrustedHtml')).getInnerHtml()).toBe(
* '<span onmouseover="this.textContent="Explicitly trusted HTML bypasses ' +
* 'sanitization."">Hover over this text.');
* });
* });
* </file>
* </example>
*
*
*
* ## Can I disable SCE completely?

```

```

*
* Yes, you can. However, this is strongly discouraged. SCE gives you a lot of security benefits
* for little coding overhead. It will be much harder to take an SCE disabled application and
* either secure it on your own or enable SCE at a later stage. It might make sense to disable SCE
* for cases where you have a lot of existing code that was written before SCE was introduced and
* you're migrating them a module at a time.
*
* That said, here's how you can completely disable SCE:
*
* ```
* angular.module('myAppWithSceDisabledmyApp', []).config(function($sceProvider) {
* // Completely disable SCE. For demonstration purposes only!
* // Do not use in new projects.
* $sceProvider.enabled(false);
* });
* ```
*
*/

USING IDSWITCH GENERATOR TOOL

Usage:

```
java org.mozilla.javascript.tools.idswitch.Main <SINGLE-JAVA-SOURCE>
```

The main purpose of this utility is to generate Java code to map strings to some ids that can be used, for example, in a switch statement.

The utility scans the input file for lines with the following structure:

```
// #string_id_map#
... <DEFINITION AREA>
// #generated#
...<GENERATED AREA>
// #/generated#
... <DEFINITION AREA>
// #/string_id_map#
```

Then every line in <DEFINITION AREA> is scanned for the pattern:

```
^[\t]*Id_([0-9a-zA-Z_]+)[\t]*=.*$
```

Each such patterns adds a mapping from string \$1 to Id\_\ $\backslash$ \$ or if the line also contains the pattern

```
//\s*#string=\s*(\[^\#\]+\)\s*#, then it adds map of $1 in this pattern to Id_\ \backslash $
```

After that lines in <GENERATED AREA> are replaced by a code block that sets variable "id" to Id\_<name> if variable "s" equals <name> (or value defined by //string=...# construction in the line with Id\_<name>) or 0 otherwise.

If the new code for <GENERATED AREA> is identical to old one, the file is not touched otherwise

<GENERATED AREA> is overwritten by the new code and a time stamp is appended after #generated#.

For example, if file x.java contains:

```
// #string_id_map#

private int getId(String s) {
 int id;
// #generated# Initial version
// #/generated#
 return id;
}

private static final int
 Id_x = 1,
 Id_y = 2,
 Id_hello = 3, // #string = Hello, World! #
 Id_symbols = 4, // #string=<<*Symbols*>>#
 Id_nice = 5,
 Id_for = 6,
 Id_bar = 7;
```

```
// #/string_id_map#

....

private double getFieldValue(String s) {

// #string_id_map#
final int
 Id_field1 = 1,
 Id_field2 = 2,
 Id_field3 = 3,
 Id_one_more_field = 4; // #string = ONE%MORE%FIELD#

 int id;
// #generated# Initial version
// #/generated#
// #/string_id_map#
 switch (id) {
 case Id_field1: return field1;
 case Id_field2: return field2;
 case Id_field3: return field3;
 case Id_one_more_field: return one_more_field;
 }
 throw new RuntimeException("No such field");
}
}
```

then invocation

```
java org.mozilla.javascript.tools.idswitch.Main x.java
```

would replace that by a code fragment similar to:

```
// #string_id_map#

private int getId(String s) {
 int id;
// #generated# Last update: 2001-05-25 18:00:24 GMT+02:00
 L0: { id = 0; String X = null; int c;
 L: switch (s.length()) {
 case 1: c=s.charAt(0);
 if (c=='x') { id=Id_x; break L0; }
 else if (c=='y') { id=Id_y; break L0; }
 break L;
 case 3: c=s.charAt(0);
 if (c=='b') { if (s.charAt(2)=='r' && s.charAt(1)=='a') {id=Id_bar; break L0;} }
 else if (c=='f') { if (s.charAt(2)=='r' && s.charAt(1)=='o') {id=Id_for; break L0;} }
 break L;
 }
 }
}
```

```

 case 4: X="nice";id=Id_nice; break L;
 case 13: c=s.charAt(0);
 if (c=='<') { X="<<*Symbols*>>";id=Id_symbols; }
 else if (c=='H') { X="Hello, World!";id=Id_hello; }
 break L;
 }
 if (X!=null && X!=s && !X.equals(s)) id = 0;
 }
}
// #generated#
return id;
}

private static final int
 Id_x = 1,
 Id_y = 2,
 Id_hello = 3, // #string = Hello, World! #
 Id_symbols = 4, // #string=<<*Symbols*>>#
 Id_nice = 5,

```
/**
```

```
* This interface defines a protocol for the reporting of
```

```
* errors during JavaScript translation in IDE-mode.
```

```
* If the {@link org.mozilla.javascript.Parser}'s error reporter is
```

```
* set to an instance of this interface, then this interface's
```

```
* {@link #warning} and {@link #error} methods are called instead
```

```
* of the {@link org.mozilla.javascript.ErrorReporter} versions. <p>
```

```
*
```

```
* These methods take a source char offset and a length. The
```

```
* rationale is that in interactive IDE-type environments, the source
```

```
* is available and the IDE will want to indicate where the error
```

```
* occurred and how much code participates in it. The start and length
```

```
* are generally chosen to fit within a single line, for readability,
```

```
* but the client is free to use the AST to determine the affected
```

```
* node(s) from the start position and change the error or warning's
```

```
* display bounds.<p>
```

```
*
```

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,

worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. **Trademarks.** This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. **Disclaimer of Warranty.** Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

## END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

### TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

#### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
  
8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
  
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[ ]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.
