Documentation Feedback

To provide feedback about Cisco technical documentation, use the feedback form available in the right pane of every online document.

Cisco Bug Search Tool

Cisco Bug Search Tool (BST) is a web-based tool that acts as a gateway to the Cisco bug tracking system that maintains a comprehensive list of defects and vulnerabilities in Cisco products and software. BST provides you with detailed defect information about your products and software.

Bias-Free Language

The documentation set for this product strives to use bias-free language. For purposes of this documentation set, bias-free is defined as language that does not imply discrimination based on age, disability, gender, racial identity, ethnic identity, sexual orientation, socioeconomic status, and intersectionality. Exceptions may be present in the documentation due to language that is hardcoded in the user interfaces of the product software, language used based on standards documentation, or language that is used by a referenced third-party product.

Cisco HyperFlex Systems Upgrade Guide for VMware ESXi, Release 4.5

New and Changed Information

• New and Changed Information, on page 1

New and Changed Information

The following table provides an overview of the new features and changes made to this guide for this current release.

Feature	Description	HX Release or Date Added	Where Documented
New guide	Upgrade content for Cisco HX Data Platform release 4.5(1a).	January 6, 2021	-

Overview

- About this Guide, on page 3
- Determining the Correct Upgrade Path for my HX Deployment, on page 3
- Upgrading from an Unsupported Cisco HyperFlex HX Data Platform Software Release, on page 4

About this Guide

This document is designed to guide Cisco HyperFlex (HX) users who are currently running HX Release 3.5(2a) or later and want to upgrade their environment to a more recent HX release.

If your cluster is managed by Intersight, please refer to Upgrading Cisco HyperFlex Edge Systems with Cisco Intersight.

On-premises HyperFlex upgrade:

- HyperFlex Data Platform Upgrades using HyperFlex Connect
- HyperFlex Edge Upgrades
- Upgrades for HyperFlex Stretched Clusters
- Split upgrade procedures

Determining the Correct Upgrade Path for my HX Deployment

Much of this document focuses on upgrading regular HyperFlex deployments using HyperFlex Connect. Many of the upgrade tasks are the same for Edge and Stretched Cluster configurations, but there are differences that should be noted. Use the information below to navigate through this document based on your specific configuration.

1. Select the Cisco HyperFlex Data Center release currently running in your environment and follow the upgrade workflow for your specific upgrade.

Cisco HyperFlex Data Center release currently running in your environment	Cisco Upgrade Guide	Supporting Upgrade Videos
Cisco HX Release 3.5(1a) and earlier	Cisco HyperFlex Systems Upgrade Guide for Unsupported Cisco HX Releases	Cisco Communities Data Center Videos
Cisco HX Release 3.5(2a) through 4.0(x)	Cisco HyperFlex System Upgrade Guide for VMware 4.5 (this guide). Continue to the next table to select your Deployment type.	Coming soon.

2. Verify the minimum supported version of ESXi (vSphere) for your target upgrade release, then proceed to step 3.

Target Release	Minimum Supported Version of ESXi (vSphere)
3.5(2a) - 4.0(2x)	6.0 U3
4.5(1a) or later	6.5 U3

3. Select your deployment type:

Deployment Type	Link to chapter in this guide
Classic HyperFlex Deployment	Prerequisites for Upgrading HyperFlex Software, on page 5
HyperFlex Edge Deployment	HyperFlex Edge Upgrade Overview, on page 31
HyperFlex Edge Upgrade through Intersight	Upgrading Cisco HyperFlex Edge Systems with Cisco Intersight
HyperFlex Stretched Clusters	Stretched Cluster Upgrade Overview, on page 39
Split-upgrade Procedures	Online Upgrade of HyperFlex Data Platform Software Only Using CLI, on page 49

Upgrading from an Unsupported Cisco HyperFlex HX Data Platform Software Release

Cisco HyperFlex users who need to upgrade their environment from a Cisco HyperFlex HX Data Platform software release that is past the last date of support, to the latest suggested release on the Cisco Software Download site, should follow the upgrade steps for their current release as defined in the Cisco HyperFlex Systems Upgrade Guide for Unsupported Cisco HX Releases Guide. The steps in this guide are not applicable for clusters running older software

Prerequisites and Guidelines

- Prerequisites for Upgrading HyperFlex Software, on page 5
- Upgrade Recommendations, on page 6

Prerequisites for Upgrading HyperFlex Software

The following tasks should be performed prior to beginning the upgrade process:

Important

Using VMware Update Manager (VUM) or VMware Lifecycle Manager (vLCM) for upgrading the ESXi on HyperFlex node is not supported. Using these upgrade methods may delete Cisco custom drivers and cause cluster outages. We recommend using Cisco Intersight or HyperFlex Connect for ESXi upgrades including the security patches from VMware or manually installing patches using the offline zip bundle with ESXCLI commands.

• Ensure Storage I/O Control (SIOC) is completely disabled on each HyperFlex datastore and the local datastore on each ESXi host in the HyperFlex cluster. This can be confirmed through the vCenter Web Client:

Datastores -> <datastore name> -> Configure -> General -> Datastore Capabilities -> Storage I/O Control -> Verify > both Status and Statistics Collection is set to **Disabled**.

Note Please refer to the VMware documentation site for more details and steps to disable SIOC.

Datastore Requirements:

- Clusters running HXDP Release 4.5(2a) or later can upgrade directly to 6.0(1a).
- Clusters running HXDP Release 4.0(2x) through 4.5(1x) can upgrade directly to 5.5(1a).
- HXDP Release 4.5 supports ESXi version 6.5 U3 and later only. If your current ESXi version is earlier than 6.5 U3, make sure to perform a combined upgrade of HXDP and ESXi to a target level 6.5 U3 or later.

• Review the Cisco HyperFlex Upgrade Guidelines in the Recommended Cisco HyperFlex HX Data Platform Software Releases - for Cisco HyperFlex HX-Series Systems.

SCVM Support

- SCVM VMware Tools upgrade: not supported
- · SCVM Hardware Version upgrade: not supported
- SCVM VMware Tools are used when creating HX native snapshots using the quiesce option.
- vCenter version check: Verify that the vCenter meets the minimum requirement for the ESXi version being upgraded to. See, VMware Product Interoperability Matrices to ensure compatibility between vCenter and ESXi.
- · Ensure all VM network port groups exist on all nodes in the cluster for vMotion compatibility.
- Ensure that the management and storage data VLANs are configured on the top-of-rack network switches to ensure uninterrupted connectivity during planned fabric failover.
- If using jumbo frames in your environment, ensure jumbo frames are enabled on the vMotion and data networks on the top of rack switch.
- Verify that the ESXi hosts are not in lockdown mode and SSH service is enabled and set to start and stop with the host for the duration of the upgrade. Lockdown mode can be re-enabled after the upgrade is complete along with disabling SSH service.
- Upgrading the VM compatibility version or hardware version of the Storage Controller Virtual Machine (SCVM) is not supported and should not be performed. This action is detrimental to the SCVM and will require a rebuild of the SCVM if performed.
- If you are using HX CSI then contact TAC.

Upgrade Recommendations

For upgrading supported releases, see the Recommended Cisco HyperFlex HX Data Platform Software Releases - for Cisco HyperFlex HX-Series Systems.

If you want to upgrade from a release that is no longer supported, see the Cisco HyperFlex Systems Upgrade Guide for Unsupported Cisco HX Releases.

Pre-Upgrade Health Check Utility

- Hypercheck: Pre-Upgrade Check Tool, on page 7
- Hypercheck Pre-Upgrade Utility for Cisco HX Release 4.5 and Later, on page 7
- Test Upgrade Eligibility, on page 7

Hypercheck: Pre-Upgrade Check Tool

Cisco recommends running Hypercheck health check tool before the upgrade to validate all upgrade requirements are met. The Hypercheck: HyperFlex and Pre-Upgrade Check Tool are automated health and pre-upgrade checks that are designed to ensure your clusters are healthy before you upgrade. It is imperative that this health check is not just performed, but that you take corrective action on any cluster that is found to be unhealthy. Correct all issues reported by the Hypercheck health check before continuing with the upgrade.

If you prefer not to run the Hypercheck tool, please refer to manual checklist in chapter 14. These checks are not as comprehensive as Hypercheck so manual validation is not recommended.

Hypercheck Pre-Upgrade Utility for Cisco HX Release 4.5 and Later

The HyperCheck 4.5 script is included with the product and Rest APIs integration has improved performance. When a cluster is deployed, Hypercheck is included as part of the cluster. New features and checks include: Cluster Information table, DR (local and remote network) and SED checks for users who have them enabled.

- **Step 1** Run the **hypercheck** command to start the checks.
- **Step 2** Once check is complete, verify results. If there are failures, perform the steps for any given workaround solutions, confirm the cluster storage capacity, and check settings. For more settings details see, Preparing for Upgrade, on page 9.

Test Upgrade Eligibility

Beginning with Cisco HyperFlex Release 4.0(2a), the Upgrade page displays the last cluster upgrade eligibility test result and last tested version of UCS server, HX data platform, and/or ESXi.

Before upgrading UCS server firmware, HyperFlex data platform, and/or ESXi, perform upgrade eligibility test in the Upgrade page to validate and check the cluster readiness and the infrastructure compatibility for an upgrade.

Note The Upgrade Eligibility test uses the validations included in the current running HyperFlex Data Platform version. It does not include newer validations that are present in the target HX version.

To perform upgrade eligibility test:

- 1. Select Upgrade > Test Upgrade Eligibility.
- 2. Select the UCS Server Firmware check box to test upgrade eligibility of UCS server firmware.

Enter the Cisco UCS Manager FQDN or IP address, username, and password. In the **Current Version** field, click **Discover** to choose the UCS firmware package version that need to be validated before upgrade.

3. Select the HX Data Platform check box to test upgrade eligibility of HyperFlex Data Platform.

Enter the vCenter username and password. Upload the Cisco HyperFlex Data Platform Upgrade Bundle that need to be validated before upgrade.

4. Select the ESXi check box to test upgrade eligibility of ESXi.

Enter the vCenter username and password. Upload the Cisco HyperFlex Custom Image Offline Bundle that need to be validated before upgrade.

5. Click Validate.

The progress of the upgrade eligibility test is displayed.

Preparing for Upgrade

- HyperFlex Upgrade Preparation, on page 9
- Checking Cluster Storage Capacity, on page 10
- Verify Health of an UCS Fabric Interconnect Cluster in Cisco UCS Manager, on page 10
- Viewing HyperFlex Cluster Health, on page 11
- Viewing ESX Agent Manager, on page 11

HyperFlex Upgrade Preparation

Note If you are upgrading one of the following rather than a HyperFlex standard cluster:

- For HyperFlex Edge clusters, see HyperFlex Edge Upgrade, on page 31.
- For Stretched clusters, see Stretched Cluster Upgrade, on page 39.
- For split-upgrade procedures, see HyperFlex Offline Upgrade Workflow, on page 49.

The following image describes the general upgrade workflow for a full-stack HyperFlex standard cluster.

HyperFlex Upgrade Workflow

The upgrade requires you to complete the following tasks in this order:

- 1. Complete all tasks in the Prerequisites section of this guide.
- 2. Run the Hypercheck Health & Pre-Upgrade tool to on your HyperFlex systems to ensure its stability and resiliency Hypercheck : Hyperflex Health & Pre-Upgrade Check Tool
- **3.** Verify that your VMware vCenter version is 6.5 U3 or later and that vCenter and your target ESXi version are compatible. See, *VMware Product Interoperability Matrices* on the VMware site. Also, verify the vCenter version is compatible with the target HXDP version.

Checking Cluster Storage Capacity

Cisco recommends that you check the cluster storage capacity before starting the upgrade of an existing installation of Cisco HX Data Platform. If the storage utilization in the cluster is equal to 76% or more (capacity + overhead), the upgrade validation fails.

Refer to the *HX Storage Cluster Overview* chapter in the Cisco HyperFlex Data Platform Administration Guide for background details about checking cluster storage capacity.

Perform the following validations on each HyperFlex node before starting the upgrade.

- Verify that the HyperFlex cluster is healthy and online.
- Verify all HyperFlex cluster nodes are connected to the vCenter and are online.
- Verify that DRS is enabled and set to fully automated if licensed for DRS. If DRS is Disabled, manual
 intervention is required to vMotion the VMs manually when prompted by the upgrade process.
- Verify vMotion is configured on all the nodes, If vMotion is not configured, see Verify vMotion Configuration for HX Cluster before starting the upgrade.
- Verify that ESXi Agent Manager (EAM) health is normal.
- Verify the health of the UCSM Fabric Interconnect cluster in Cisco UCS Manager.

Verify Health of an UCS Fabric Interconnect Cluster in Cisco UCS Manager

- Step 1Verify if the high availability status of the fabric interconnects shows that both the fabric interconnects are up and running.
See the Cisco UCS Manager System Monitoring Guide for more information.
- **Step 2** Verify that all servers have been discovered.
- **Step 3** Verify that the HyperFlex servers have no faults.
- **Step 4** Verify that vNIC faults are cleared to ensure VMware ESXi vSwitch uplinks are up and operational.
- **Step 5** Verify that the data path is up and running. See the Cisco UCS Manager Firmware Management Guide for more information.

Viewing HyperFlex Cluster Health

Using CLI

Log into any controller VM in the storage cluster. Run the command stcli cluster storage-summary --detail or hxcli cluster info [flags].

```
address: 192.168.100.82
name: HX-Cluster01
state: online
uptime: 0 days 12 hours 16 minutes 44 seconds
activeNodes: 5 of 5
compressionSavings: 78.1228617455
deduplicationSavings: 0.0
freeCapacity: 38.1T
healingInfo:
   inProgress: False
resiliencyDetails:
       current ensemble size:5
        # of ssd failures before cluster shuts down:3
        minimum cache copies remaining:3
        minimum data copies available for some user data:3
        minimum metadata copies available for cluster metadata:3
        # of unavailable nodes:0
        # of nodes failure tolerable for cluster to be available:2
        health state reason:storage cluster is healthy.
        # of node failures before cluster shuts down:3
        # of node failures before cluster goes into readonly:3
        # of hdd failures tolerable for cluster to be available:2
       # of node failures before cluster goes to enospace warn trying to move the existing
 data:na
        # of hdd failures before cluster shuts down:3
        # of hdd failures before cluster goes into readonly:3
        # of ssd failures before cluster goes into readonly:na
        # of ssd failures tolerable for cluster to be available:2
resiliencvInfo:
   messages:
     Storage cluster is healthy.
     state: healthy
     hddFailuresTolerable: 2
     nodeFailuresTolerable: 1
     ssdFailuresTolerable: 2
spaceStatus: normal
totalCapacity: 38.5T
totalSavings: 78.1228617455
usedCapacity: 373.3G
clusterAccessPolicy: lenient
dataReplicationCompliance: compliant
dataReplicationFactor: 3
```

Sample response that indicates the HyperFlex storage cluster is online and healthy.

Viewing ESX Agent Manager

If the HyperFlex cluster you are upgrading was deployed originally with HXDP Release 3.5(1x) or earlier, the HyperFlex controller VM is managed by the ESX Agent Manager (EAM). Alternatively, you can check

if the HyperFlex Controller VM is managed by EAM by logging into vCenter > Click on the HyperFlex Controller VM > Summary. If you see Managed By: vSphere ESX Agent Manager, your HyperFlex Controller VM is being managed by EAM and you should verify the EAM health by following the process below. Otherwise, this section should be skipped.

🚯 🛛 🖉 🗅	🔲 🍪 📇 🎯 Actio	ons 🔻			
Getting Started Summary Monitor	Configure Permissio	ons Snapshots	Datastores	Networks	Update Manag
Powered On Comp Mana VMw DNS	t OS: Ubuntu Linux (64- atibility: ESXi 6.0 and later ged By: vSphere ESX Age are Tools: Running, version: More info Vame: dresses: View all 4 IP addr	r (VM version 11) ent Manager 2147483647 (Guest M	Managed)		

Verifying EAM Health:

From the vSphere Web Client Navigator, select Administration > vCenter Server Extensions > vSphere ESX Agent Manager > Summary.

Verify that ESX Agent Manager (EAM) health is normal.

Download Software Bundles

• Downloading Software, on page 13

Downloading Software

For a successful HyperFlex upgrade, the Cisco HyperFlex System component bundles can be downloaded from the Cisco HyperFlex Download website:

- Step 1 Navigate to https://www.cisco.com/support and enter HX Data Platform in the Select a Product search bar. Click on the HyperFlex HX Data Platform downloads link
 Step 2 Click on the current Suggested Release version.
 Step 3 Click the cart icon for the latest Cisco HyperFlex Data Platform Upgrade Bundle for upgrading existing HyperFlex
- Step 3 Click the cart icon for the latest Cisco HyperFlex Data Platform Upgrade Bundle for upgrading existing HyperFlex clusters from a previous release (.tgz file).

Note Read through any Software Advisories to confirm whether any issues may apply to your environment before proceeding with the download.

- Step 4 Click the cart icon for the corresponding UCS Infrastructure Software Bundle based on the FI model.
- **Step 5** Click the cart icon for the Software for UCS B-Series and C-Series blade and rack-mounted servers.
- **Step 6** For upgrading vSphere, click on the cart icon for the latest HX Custom Image for ESXi Offline Bundle for Upgrading from prior ESXi versions.
- Step 7 Click on the cart icon at the stop of the screen to confirm the bundles and click Download All.
- **Step 8** Accept the license agreement and click **Ok** for each file to save it.

I

Upgrade UCS Infrastructure Firmware

- Upgrading UCS Infrastructure Firmware Workflow, on page 15
- Guidelines and Limitations, on page 15
- Upgrade UCS Infrastructure Firmware, on page 16

Upgrading UCS Infrastructure Firmware Workflow

Upgrade Type	Procedure
HyperFlex Clusters	See the workflow below.
HyperFlex Edge Upgrade Clusters	HyperFlex Edge Upgrade, on page 31
HyperFlex Stretched Clusters	Stretched Cluster Upgrade, on page 39
Split Upgrade Procedures	HyperFlex Offline Upgrade Workflow, on page 49

Perform the following tasks to upgrade UCS Infra Firmware:

- Review Prerequisites for Upgrading HyperFlex Software, on page 5 before beginning upgrade.
- Log into the UCSM Fabric Interconnect cluster IP address.
- Upload the appropriate Infra, B-Series, and C-Series bundles to the Fabric Interconnect.

Guidelines and Limitations

Consider the following before performing the UCS Infra Firmware upgrade:

- Ensure that the hx-storage-data and vMotion upstream switches are configured for **Jumbo Frames** before proceeding forward, otherwise the HyperFlex Cluster could suffer a network and storage outage during the upgrade window.
- You will lose connectivity to UCS Manager throughout the entire UCS infrastructure firmware upgrade. This is normal behavior.
- Verify that the Data path is ready. For for more information, see the Verification that the Data Path is Ready section in the Cisco UCS Manager Firmware Management Guide..

Upgrade UCS Infrastructure Firmware

Before you begin

Download the Infra, B-Series, and C-Series Fabric Interconnect upgrade bundles. For details, see Downloading Software, on page 13.

Step 1	Log on to UCS Manager to the Fabric Interconnect cluster IP address using admin privileges.		
Step 2	Navigate to Equipment > Firmware Management > Installed Firmware.		
Step 3	Expand U	JCS Manager and confirm the UCS Manager running version.	
Step 4	Navigate	to Download Tasks > Download Firmware.	
Step 5		b your saved Fabric Interconnect bundles and select the Infra A, B-Series, and C-Series bundles you previously ck Open and OK .	
Step 6	Once the Actions .	files have transferred, click on Firmware Auto Install and then Install Infrastructure Firmware under	
	Note	Review carefully all warnings and resolve any issues if required before proceeding.	
Step 7	Once any	issues are resolved (if any) select Ignore All and click Next.	
Step 8	Select the appropriate Infra Pack from the drop-down and check Upgrade Now and click Finish.		
	Note	You can click Yes to disregard the warning for the Service Pack not being selected.	
Step 9	Click on	the FSM tab to follow the upgrade progress. The upgrade takes some time to proceed.	
Step 10		he Pending Activities tab at the top and then Fabric Interconnects to verify that the data path is successfully from the Secondary Fabric Interconnect before you acknowledge the reboot of the Primary Fabric Interconnect.	
Step 11	Click Reboot Now and then click Yes and OK .		
	Note	During the course of the upgrade process, you will be logged out of the Fabric Interconnect UI. Log back into view the upgrade progress.	
Step 12	Once the	Upgrade process is completed, view the updated versions on the Installed Firmware tab.	

CHAPTER

Upgrade UCS Server Firmware, HX Data Platform and VMware vSphere - Combined Upgrade

- Upgrade Cisco UCS Firmware, HX Data Platform, and VMware vSphere Workflow, on page 17
- Guidelines and Limitations, on page 18
- Upgrading HyperFlex Data Platform Software, VMware ESXi, and Cisco UCS Server Firmware using HX Connect, on page 19

Upgrade Cisco UCS Firmware, HX Data Platform, and VMware vSphere Workflow

The Cisco HyperFlex "full-stack" upgrade process involves upgrading the following 3 components:

- · Cisco HyperFlex Data Platform
- VMware vSphere ESXi
- Cisco UCS Server Firmware

Cisco recommends upgrading all these 3 components in a combined upgrade from HyperFlex Connect. You can choose to upgrade one, two or all three components in the same upgrade workflow. If you are combining two or more components in a single upgrade process, follow the procedure below. Otherwise, navigate to Chapter 9 for individual component upgrade procedures.

This section describes the steps to perform a combined upgrade of HyperFlex Data Platform Software, VMware ESXi, and UCS Server firmware. In this process, the HyperFlex nodes will go through an optimized rolling reboot without any workload disruptions, by use of VMware vMotion.

Note As part of the Server Firmware upgrade operation initiated from HX Connect, some of the UCS policies may be updated to be compatible with the new HXDP version. These changes are applied only to the nodes that are part of the cluster being upgraded. It is highly recommended to use HX Connect to initiate the Server Firmware upgrade to avoid any policy drift.

Upgrade Type	Procedure
HyperFlex Clusters	See the workflow below.

Upgrade Type	Procedure
HyperFlex Edge Clusters	HyperFlex Edge Upgrade, on page 31
HyperFlex Stretched Clusters	Stretched Cluster Upgrade, on page 39
Split Upgrade Procedures	HyperFlex Offline Upgrade Workflow , on page 49

Perform the following tasks to upgrade UCS Firmware and HX Data Platform:

- Review Prerequisites for Upgrading HyperFlex Software, on page 5 before beginning upgrade.
- Log into HX Connect with admin privileges.
- Select the appropriate options from the Upgrade page.
- Upload the required files and complete the necessary user inputs.

Guidelines and Limitations

Consider the following before performing the upgrade:

• If DRS is *Enabled* and set to fully automatic mode, the VMs are automatically vMotioned to other hosts during the rolling upgrade process.

Note If DRS is *Disabled*, vMotion the VMs manually to continue the upgrade process when prompted. For more information, see VMware Documentation for Migration with vMotion.

- Downgrading ESXi and HXDP is not supported.
- Refer to the Release Notes for software compatibilities of HXDP, UCS firmware, and VMware ESX. Additionally, ensure vCenter is upgraded to a compatible version before upgrading ESXi. For details, see the Cisco HyperFlex Release Notes that correspond with your installation, Recommended Cisco HyperFlex HX Data Platform Software Releases for Cisco HyperFlex HX-Series Systems, and the *VMware Product Interoperability Matrix* on the VMware site.
- Do not manually upgrade UCS server firmware using the tools available in UCS Manager. Changes to
 policies in UCS Manager for HyperFlex servers are delivered through the orchestrated server firmware
 upgrade process. Manually performing firmware updates out of band will result in these important
 configuration updates being missing.
- During a HX 4.5 upgrade, the SSL certificates are regenerated and this causes an interruption with VEEAM integration until the new certificate is re-imported.
- If you are running a HyperFlex release that is earlier than release 3.5(1a) you must run the manual bootstrap process to upgrade the Cisco HX Data Platform. These procedures are covered in the Cisco HyperFlex Systems Upgrade Guide for Unsupported Cisco HX Releases Guide.

Upgrading HyperFlex Data Platform Software, VMware ESXi, and Cisco UCS Server Firmware using HX Connect

Before you begin

- Download the latest Cisco HX Data Platform Upgrade Bundle for upgrading existing clusters from previous release, from Downloading Software.
- Download the appropriate HX custom ESXi offline upgrade bundle from https://www.cisco.com/.
- Disable snapshot schedule, on the storage controller VM. SSH to HyperFlex cluster IP and run the command stcli snapshot-schedule -disable snapshot schedule.
- Pause replication using the run the stcli dp schedule pause command and enable it after upgrade using the stcli dp schedule resume command. For more detailed steps, see Pausing Replication.

Step 1 Log into HX Connect.

- a) Enter the administrative username and password.
- b) Click Login.
- **Step 2** In the Navigation pane, select **Upgrade**.
- **Step 3** On the **Select Upgrade Type** page, select **HX Data Platform**, **ESXi**, and **UCS Server Firmware** and complete the following fields:

Field	Essential Information	
UCS Manager Connectivity		
UCS Manager FQDN/IP	Enter the Cisco UCS Manager FQDN or IP address. Example: 10.193.211.120.	
User Name	Enter the Cisco UCS Manager <admin> username.</admin>	
Admin Password	Enter the Cisco UCS Manager <admin> password</admin>	
HX Server Firmware		
Discover	Click Discover to view the current UCS firmware package version.	

Field	Essential Information
M3/M4 Desired Version/M5 Desired Version (Depending on the nodes in the cluster)	Select the appropriate C-Series firmware versions. Optionally, if you have Compute only B-Series UCS blades in the cluster select the appropriate B-Series firmware version.
	Only C & B bundles uploaded to UCS Manager will be shown in the list. Return to Upgrading UCS Infrastructure Firmware Workflow, on page 15 if the desired version is not shown.
	Only compatible firmware versions are shown in the dropdown list. If the desired version is not displayed, confirm the compatibility between HXDP & Server Firmware in the Cisco HyperFlex Software Requirements and Recommendations document.

Note If the UI doesn't show your desired UCS server firmware version in dropdown, see HX Connect UCS Server Firmware Selection Dropdown Doesn't List the Firmware Version 4.1 or Above, on page 60.

Step 4 Upload the HyperFlex Data Platform upgrade package (storfs-package).

Field	Essential Information
Drag the HX file here or click to browse	Upload the latest Cisco HyperFlex Data Platform Upgrade Bundle for upgrading existing clusters with previous release.tgz package file from Download Software -HyperFlex HX Data Platform. Sample file name format: storfs-packages-4.5.1a-31601.tgz.
Current version	Displays the current HyperFlex Data Platform version.
Current cluster details	Lists the HyperFlex cluster details like the HyperFlex release and cluster upgrade state .
Bundle version	Displays the HyperFlex Data Platform version of the uploaded bundle.
(Optional) Checksum	The MD5 Checksum number is available by hovering over the filename in the Cisco.com Software Download section.
	This is an optional step that helps you verify the integrity of the uploaded upgrade package bundle

- **Step 5** Upload the ESXi offline upgrade bundle.
- **Step 6** Provide vCenter login credentials.

Field	Essential Information
User Name	Enter the vCenter <i><admin></admin></i> username.
Admin Password	Enter the vCenter <i><admin></admin></i> password.

- **Step 7** Click **Upgrade** to begin the first step of the combined upgrade process.
- **Step 8** The **Validation Screen** on the **Upgrade Progress** page displays the progress of the checks performed. Fix validation errors, if any.

- **Note** At this point, all pre-upgrade checks and validations will run, along with the initial upgrade stage. Within a few minutes, HX Connect returns and prompts the user to confirm and start the second stage of the upgrade. The upgrade is not complete until both steps are performed in the UI. The system should never be left in a state where only the first step of the upgrade is complete.
- **Note** Do not manually acknowledge servers in UCS Manager. While the servers enter a pending-ack state, the administrator should not manually intervene. The HyperFlex platform will automatically acknowledge each server at the correct time.
- **Note** As of HX 5.0(1b), an upgrade status appears providing the result of the last upgrade along with the versions that were upgraded (source and target versions for each component selected in the upgrade). You can dismiss this status only if it is successful. If the last upgrade fails, you will need to fix the issue. This banner is a reminder to take action to correct the upgrade.
- **Step 9** The HyperFlex Connect UI refreshes after the first step of the upgrade, and a banner pops up prompting you to provide the UCS and vCenter credentials and start the second stage of the upgrade process. Monitor the upgrade page and confirm that the upgrade is complete.

When upgrade is in progress, you may see an error message, Websocket connection failed. Automatic refresh disabled. You can either refresh the page or log out and log back in to clear the error message. You can safely ignore this error message.

What to do next

Proceed to Confirm That Upgrade Is Complete, on page 29 for post upgrade tasks once the upgrade is complete. If the upgrade fails, you can re-try the upgrade or contact Cisco TAC for further assistance. Running a cluster without remediation after an upgrade failure is not recommended. Care should be taken to fully complete the upgrade as soon as possible.

Upgrade UCS Server Firmware, HX Data Platform and VMware vSphere - Combined Upgrade

Upgrading HyperFlex Data Platform Software, VMware ESXi, and Cisco UCS Server Firmware using HX Connect

CHAPTER

Upgrade UCS Firmware, HX Data Platform and VMware vSphere - Individual Component Upgrade

- Overview, on page 23
- Cisco HyperFlex Data Platform Upgrade, on page 23
- Cisco HXDP Upgrade using HX Installer, on page 25
- Cisco UCS Server Firmware Upgrade, on page 26
- VMware vSphere/ESXi Upgrade, on page 27

Overview

Cisco recommends upgrading all these 3 components in a combined full-stack upgrade from HyperFlex Connect. You can choose to upgrade one, two or all three components at a time. If you are combining 2 or more components in a single upgrade process, follow procedures described in the previous chapter. Otherwise, follow below procedures for individual component upgrade one at a time.

Cisco HyperFlex Data Platform Upgrade

Before you begin

- Download the latest Cisco HX Data Platform Upgrade Bundle for upgrading existing clusters from previous releases, from Downloading Software, on page 13.
- Disable snapshot schedule, on the storage controller VM. SSH to the HyperFlex cluster IP and run the command stcli snapshot-schedule -disable snapshot schedule.
- Pause replication using the run the stcli dp schedule pause command and enable it after upgrade using the stcli dp schedule resume command. For more detailed steps, see Pausing Replication.

Step 1 Log into HX Data Platform.

a) Enter the administrative username and password.

- b) Click Login.
- **Step 2** In the Navigation pane, select **Upgrade**.
- Step 3 On the Select Upgrade Type page, select HX Data Platform and complete the following fields:

UI Element	Essential Information
Drag the HX file here or click to browse	Upload the latest <i>Cisco HyperFlex Data Platform Upgrade Bundle for upgrading</i> <i>existing clusters with previous release.tgz</i> package file from Download Software - HyperFlex HX Data Platform.
	Sample file name format: <i>storfs-packages-4.5.1a-31601.tgz.</i>
(Optional) Checksum field	The <i>MD5 Checksum number</i> is available by hovering over the filename in the Cisco Software Download section.
	This is an optional step that helps you verify the integrity of the uploaded upgrade package bundle.

Figure 1: Select Upgrade Type Page

= the Hyperflex Connect	ucs099_cluster 🛇 💿 🧟	
Deshboard	Select Upgrade Type Progress	
MONITOR	UCS Server Firmware	
全 Events	V POL Data Hatform	
Activity	Validating uploaded package	
ANALYZE Performance	Gunerowski 33.1a3118 Gunerodaan daala Buddewski KA	
PROTECT	2 Oxform	
MANAGE		
System information Datastores	Vector or ophenologies (Hingarent function for Vehanent ESD suggested) Vector Name Administratory Administrator	
Virtual Machines Vigrade	Lograde	
>_ web CU	b	
About	Custer Time : 12:05:0018 3:02:30 PM P3T	

Step 4 Enter the vCenter credentials.

UI Element	Essential Information
User Name field	Enter the vCenter <i><admin></admin></i> username.
Admin Password field	Enter the vCenter <i><admin></admin></i> password.

Step 5 Click **Upgrade** to begin the cluster upgrade process.

- **Step 6** The Validation screen on the **Upgrade Progress** page displays the progress of the checks performed. Fix validation errors, if any.
 - **Note** At this point, all pre-upgrade checks and validations are run, along with the initial upgrade stage. Within a few minutes, HX Connect returns and prompts you to confirm and start the second stage of the upgrade. The upgrade is not complete until both steps are performed in the UI. The system should never be left in a state where only the first step of the upgrade is complete.
- **Step 7** The HyperFlex Connect UI refreshes after the first step of the upgrade, and a banner pops up prompting you to provide the UCS and vCenter credentials and start the second stage of the upgrade process. Monitor the upgrade page and confirm that the upgrade is complete.

When upgrade is in progress, you may see an error message **Websocket connection failed.** Automatic refresh disabled. You can either refresh the page or log out and log back in to clear the error message. You can safely ignore this error message.

What to do next

Proceed to Confirm That Upgrade Is Complete, on page 29 for post upgrade tasks once the upgrade is complete. If the upgrade fails, you can re-try the upgrade or contact Cisco TAC for further assistance.

Note

Running a cluster without remediation after an upgrade failure is not recommended. Care should be taken to fully complete the upgrade as soon as possible.

Cisco HXDP Upgrade using HX Installer

The ability to upgrade HXDP and ESXi (optional) using the HX Installer was introduced in Cisco HyperFlex Release 6.0(1a).

Perform the following steps to upgrade HXDP and (optional) ESXi using the HX Data Platform Installer (OVA).

Before you begin

 Download the HXDP bundle from CCO https://software.cisco.com/download/home/286305544/type/ 286305994/.

SUMMARY STEPS

- **1.** Log in to the HX Data Platform Installer.
- **2.** Follow the **Upgrade Cluster** workflow for a standard cluster.
- **3.** On the **Credentials** view, type your vCenter and Hypervisor credentials in the field boxes for the cluster you intend to upgrade. Use the eye icon to show or hide the passwords.
- 4. Click the Continue button to discover the cluster and advance to the Upgrade Cluster view.
- 5. Type the cluster password in the **Password** box and click the **Continue** button.

- **6.** Check the box to start the optional ESXi upgrade on all nodes in the cluster. Once checked, either drag or browse to the local ESXi bundle to the highlighted box.
- 7. Use the Test Upgrade Eligibility button to test the HXDP and ESXi combination.
- 8. Click the Upgrade button to complete the upgrade.

DETAILED STEPS

Step 1	Log in to the HX Data Platform Installer.	
Step 2	2 Follow the Upgrade Cluster workflow for a standard cluster.	
Step 3	On the Credentials view, type your vCenter and Hypervisor credentials in the field boxes for the cluster you intend to upgrade. Use the eye icon to show or hide the passwords.	
Step 4	Click the Continue button to discover the cluster and advance to the Upgrade Cluster view. The Select a Cluster to Upgrade box appears.	
Step 5	Type the cluster password in the Password box and click the Continue button. The workflow advances to the Optional ESXi Upgrade Configuration view.	
Step 6	Check the box to start the optional ESXi upgrade on all nodes in the cluster. Once checked, either drag or browse to the local ESXi bundle to the highlighted box.	
Step 7	Use the Test Upgrade Eligibility button to test the HXDP and ESXi combination.	

To validate or upgrade the firmware version, use HX Connect.

Step 8 Click the **Upgrade** button to complete the upgrade.

Cisco UCS Server Firmware Upgrade

Before you begin

- Check and confirm the UCS B-Series and C-Series server firmware packages have been downloaded to the Fabric Interconnects.
- Disable snapshot schedule, on the storage controller VM. SSH to HyperFlex cluster IP and run the command stcli snapshot-schedule -disable snapshot schedule.

- a) Enter the administrative username and password.
- b) Click Login.
- **Step 2** In the Navigation pane, select **Upgrade**.
- Step 3 On the Select Upgrade Type page, select UCS Server Firmware, and complete the following fields:

Field	Essential Information
UCS Manager Connectivity	

Step 1 Log into HX Connect.

L

Field	Essential Information	
UCS Manager FQDN/IP	Enter the Cisco UCS Manager FQDN or IP address. Example: 10.193.211.120.	
User Name	Enter the Cisco UCS Manager <admin> username.</admin>	
Admin Password	Enter the Cisco UCS Manager <admin> password</admin>	
HX Server Firmware		
Discover	Click Discover to view the current UCS firmware package version.	
M3/M4 Desired Version/M5 Desired Version	Select the appropriate C-Series firmware versions.	
(Depending on the nodes in the cluster)	Optionally, if you have Compute only B-Series UCS blades in the cluster select the appropriate B-Series firmware version.	
	Only C & B bundles uploaded to UCS Manager will be shown in the list. Return to Upgrading UCS Infrastructure Firmware Workflow, on page 15 if the desired version is not shown.	
	Only compatible firmware versions are shown in the dropdown list. If the desired version is not displayed, confirm the compatibility between HXDP & Server Firmware in the Cisco HyperFlex Software Requirements and Recommendations document.	

Step 4 Click **Upgrade** to begin the UCS firmware upgrade process.

Step 5 The **Validation Screen** on the **Upgrade Progress** page displays the progress of the checks performed. Fix validation errors, if any. Monitor the upgrade page and confirm that the upgrade is complete.

When upgrade is in progress, you may see an error message, Websocket connection failed. Automatic refresh disabled. You can either refresh the page or log out and log back in to clear the error message. You can safely ignore this error message.

Note Do not manually acknowledge servers in UCS Manager. While the servers will enter a pending-ack state, the administrator should not manually intervene. The HyperFlex platform will automatically acknowledge each server at the correct time.

VMware vSphere/ESXi Upgrade

¢

Important

Using VMware Update Manager (VUM) or VMware Lifecycle Manager (vLCM) for upgrading the ESXi on HyperFlex node is not supported. Using these upgrade methods may delete Cisco custom drivers and cause cluster outages. We recommend using Cisco Intersight or HyperFlex Connect for ESXi upgrades including the security patches from VMware or manually installing patches using the offline zip bundle with ESXCLI commands.

Follow the procedure below to upgrade only VMware ESXi from HyperFlex Connect. This procedure can be followed for ESXi patch upgrades as well.

Upgrading vSphere requires you to complete the following tasks:

- Refer to the release documents for software compatibilities of HXDP, UCS, and VMware and confirm your vCenter is upgraded before you upgrade. For details, see the Release Notes for Cisco HX Data Platform for your release, Cisco HyperFlex Recommended Software Release and Requirements Guide, and VMware Product Interoperability Matrices.
- Log into HX Connect using admin privileges and navigate to the Upgrade page.

Before you begin

Download the appropriate HX custom ESXi offline upgrade bundle. For details, see Downloading Software, on page 13. Cisco does not recommend use of non-HX customized ESXi bundles, although it is supported. Using HX customized bundles ensures all the latest drivers are updated and compatibility with the HyperFlex hardware.

- **Step 1** Log into HX Connect with admin privileges.
- **Step 2** Navigate to the System Information tab and confirm the running Hypervisor version.
- **Step 3** Click on the Upgrade tab and select **ESXi**.
- Step 4 Click in the bundle version window and navigate to your previously saved ESXi offline bundle and click Open.
- **Step 5** Once the bundle is uploaded, enter your vCenter credentials and click **Upgrade**.

Note The upgrade process is non-disruptive and upgrades one server at a time.

Step 6 Refresh your browser screen to view the upgrade changes on the Dashboard tab.

Note Click on the System Information tab to confirm that all the nodes are online.

Post Upgrade Tasks

- Confirm That Upgrade Is Complete, on page 29
- Enable Snapshot Scheduler (Optional), on page 30
- Enable HyperFlex Software Encryption, on page 30

Confirm That Upgrade Is Complete

Step 1 Log into Cisco UCS Manager to ensure that the HX nodes have no pending server activities. From Servers tab > Servers > Pending Activities tab check for all server activities. Step 2 Confirm that the HX nodes match the expected firmware version. In Cisco UCS Manager, from Equipment > Firmware Management > Installed Firmware tab, verify for the correct firmware version. Step 3 Log into any controller VM through SSH. # ssh admin@controller vm ip Step 4 Confirm the HyperFlex Data Platform version. # hxcli cluster version Cluster version: 4.5(1a) Node hx220-m5-node1 version: 4.5(1a) Node hx220-m5-node3 version: 4.5(1a) Node hx220-m5-node3 version: 4.5(1a) Node hx220-m5-node4 version: 4.5(1a) Step 5 Verify that the HX storage cluster is online and healthy. # hxcli cluster info|grep -i health

Sample output: healthstate : healthy state: healthy storage cluster is healthy

Step 6 Verify that the upgrade is complete and is successful.

stcli cluster upgrade-status

```
Nodes up to date:
[HX-Cluster, HX-Node-1(1.1.1.1), HX-Node-2(1.1.1.2), HX-Node-3(1.1.1.3)]
Cluster upgrade succeeded.
```

Step 7

For each browser interface you use, empty the cache and reload the browser page to refresh the HX Connect content.

Enable Snapshot Scheduler (Optional)

If you had disabled snapshot scheduler before starting the upgrade, enable the schedule now. SSH to HyperFlex cluster IP and run the command *stcli snapshot-schedule –enable* snapshot schedule.

Enable HyperFlex Software Encryption

HyperFlex Software Encryption provides file-level end-to-end AES 256-bit encryption of data at-rest. You can leverage the capability of HyperFlex Software Encryption to protect the confidentiality of your data against device theft, such as drives, servers, or entire clusters. Encryption keys are securely and remotely stored by the Intersight Key Manager, available in both the Intersight SaaS and the Intersight virtual appliance.

To enable HyperFlex Software Encryption on your cluster, check that you meet the HX Data Platform and Intersight license requirements, see Cisco HyperFlex Systems Ordering and Licensing Guide. After confirming license requirements are met, to enable HyperFlex Software Encryption, you need to download the encryption package from My Cisco Entitlement, install the package, and then enable encryption from Intersight. For more information, see HyperFlex Software Encryption.

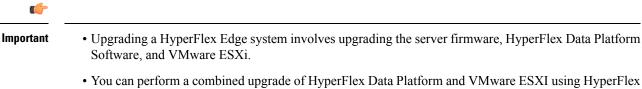

HyperFlex Edge Upgrade

- Overview, on page 31
- Cisco HyperFlex Edge Firmware Recommended Versions, on page 31
- Server Firmware Upgrade Using the Cisco Host Upgrade Utility Tool, on page 32
- Server Firmware Upgrade Using Cisco Integrated Management Controller Supervisor, on page 33
- Upgrading Server Firmware on a Cisco UCS C-Series Server Using the Cisco IMC Supervisor, on page 34
- Upgrading HyperFlex Edge Using HX Connect, on page 35
- Post Upgrade Tasks for HyperFlex Edge, on page 37

Overview

This section provides information related to upgrading a Cisco HyperFlex Edge system from the HX Connect. If your cluster was deployed using Cisco Intersight, please use Intersight to perform the cluster upgrade. For detailed upgrade prerequisites and instructions about upgrading Edge Clusters using Intersight.

- You can perform a combined upgrade of HyperFlex Data Platform and VMware ESXI using HyperFlex Connect or you can choose to perform a split upgrade.
- UCS Server firmware upgrade is not supported from HX Connect. Instead, perform the UCS server firmware upgrade separately using the Host Upgrade Utility (HUU) tool or the Integrated Management Controller (IMC) Supervisor.

Cisco HyperFlex Edge Firmware Recommended Versions

- Review the Cisco HyperFlex Release Notes for Cisco HX Data Platform that corresponds to the release for your planned upgrade.
- For upgrading supported releases, see the Cisco HyperFlex Software Requirements and Recommendations document.

- If you want to upgrade from a release that is no longer supported, see the Cisco HyperFlex Systems Upgrade Guide for Unsupported Cisco HX Releases.
- For HyperFlex Edge clusters that are upgraded using HX Connect, the HyperFlex Data Platform upgrade includes upgrade of the embedded storage firmware in addition to the HyperFlex Data Platform software. This embedded firmware upgrade includes updates to the SAS passthrough storage controller and associated drives (housekeeping, cache, and capacity) that run the distributed storage platform. A manual upgrade of these embedded firmware storage components via the HUU should not be performed. It is recommended to complete the server firmware upgrade using HX Connect. If a manual upgrade or downgrade of these storage components is required, ensure that you do the following:
 - If you are using the Host Update Utility (HUU) to upgrade chassis firmware, be sure to uncheck the option to upgrade the SAS controller and do not upgrade drives (except for the boot drive, if desired).
 - Avoid using the Upgrade All button in the HUU as this will include the storage controller by default.
 - Firmware management for these devices is handled by HyperFlex Data Platform automatically and should not be manually changed using other utilities. Only use the HUU to upgrade these components when deemed necessary for troubleshooting or as instructed by Cisco TAC.
 - For clusters running Cisco IMC version prior to version 4.1(3b), secure boot must be temporarily disabled to perform server firmware upgrade. Once Cisco IMC version 4.1(3b) version or later is running on all nodes in the cluster, secure boot can be enabled for firmware upgrade.

Server Firmware Upgrade Using the Cisco Host Upgrade Utility Tool

Step	Description	Reference
1.	Place a node in HX maintenance mode. Note Upgrade one node at a time, for the cluster to stay online during upgrade.	Entering Cisco HyperFlex Maintenance Mode
2.	Upgrade server firmware using the Host Upgrade Utility tool.	See Upgrading the Firmware on a Cisco UCS C-Series Server Using the HUU in the Cisco Host Upgrade Utility User Guide.
3.	Reboot the node back into ESXi. Exit HX maintenance mode.	
4.	Wait until the cluster becomes fully healthy.	Viewing HyperFlex Cluster Health, on page 11

The following table summarizes the server firmware upgrade workflow on Cisco HX Servers:

Step	Descript	tion	Reference
5.	Repeat steps 1-4 on the remaining HX nodes in a rolling fashion.		
	Note Ensure that you check the health state before entering maintenance mode on the next host in the cluster.		

You can find current and previous releases of the *Cisco Host Upgrade Utility User Guide* at this location: https://www.cisco.com/c/en/us/support/servers-unified-computing/ucs-c-series-rack-servers/ products-user-guide-list.html.

Server Firmware Upgrade Using Cisco Integrated Management Controller Supervisor

The following table summarizes the server firmware upgrade workflow on Cisco HX Servers:

Step	Description	Reference
1.	Place a node in HX maintenance mode.	
	Note Upgrade one node at a time, for the cluster to stay online during upgrade.	
2.	Create a rack group. Add servers to the IMC Supervisor inventory.	See Managing Server Discovery, Rack Groups, and Rack Accounts in the Cisco IMC Supervisor Rack-Mount Servers Management Guide.
3.	Configure auto-discovery profile.	See Configuring Auto Discovery Profile in the Cisco IMC Supervisor Rack-Mount Servers Management Guide.
4.	Run inventory on the rack group.	See Collecting Inventory for Rack Accounts or Rack Groups in the Cisco IMC Supervisor Rack-Mount Servers Management Guide.
5.	Create firmware profile.	Refer to the following tasks in the <i>Cisco IMC</i> Supervisor Rack-Mount Servers Management Guide:
		Adding Images to a Local Server
		• Uploading Images from a Local File System
		Adding Images from a Network Sever

Step	Descripti	on	Reference
6.	Upgrade firmware using IMC Supervisor, on the node put in maintenance mode.		See Upgrading Firmware in the Cisco IMC Supervisor Rack-Mount Servers Management Guide.
7.	Reboot the node back into ESXi. Exit HX maintenance mode.		
8.	Wait until the cluster becomes fully healthy.		
9.	Repeat step 6 on the remaining HX nodes in a rolling fashion.		
	Note	Ensure that you check the health state before entering maintenance mode on the next host in the cluster.	

You can find current and previous releases of the *Cisco IMC Supervisor Rack-Mount Servers Management Guide* here: https://www.cisco.com/c/en/us/support/servers-unified-computing/ integrated-management-controller-imc-supervisor/products-installation-and-configuration-guides-list.html.

Upgrading Server Firmware on a Cisco UCS C-Series Server Using the Cisco IMC Supervisor

If you are upgrading to Cisco IMC version 2.0(x), you must change the default Cisco IMC password.

Note Before upgrading Cisco IMC Supervisor and if a firmware profile was already set up, ensure that the Cisco.com credentials and proxy details are configured.

- Step 1 Choose Systems > Firmware Management.
- **Step 2** On the **Firmware Management** page, click **Firmware Upgrades**.
- **Step 3** Click **Run Upgrade**. A warning message appears, advising you that running the upgrade on the selected servers will cause the host to reboot into the firmware update tool. On completion of the firmware update, the servers will reboot back to the host OS.
- **Step 4** Click **OK** to confirm.
- **Step 5** On the **Upgrade Firmware** screen, complete the following:

Field	Description
Select Profile drop-down list	Choose a profile from the drop-down list.

Field	Description
Platform field	Click Select and choose the servers from the list. The list displays only those servers whose platforms match the one configured in the
Image Version field	selected profile.
Image Path field	
Schedule later check box	Check this check box and select an existing schedule to run an upgrade. You can also click the + icon to create a new schedule.

Step 6 Click Submit.

Upgrading HyperFlex Edge Using HX Connect

Cisco HyperFlex Edge cluster upgrade process involves upgrading the below 2 components:

- Cisco HyperFlex Data Platform
- VMware vSphere ESXi

You can combine HyperFlex Data Platform and VMware ESXi upgrade in a single combined upgrade for HyperFlex Edge clusters. Cisco recommends upgrading these 2 components in a combined upgrade from HyperFlex Connect. You can choose to upgrade one or two of these components at a time.

If you prefer to upgrade individual components one at a time, see VMware vSphere/ESXi Upgrade, on page 27. The component upgrade process for standard cluster and HyperFlex Edge cluster are the same.

This section describes the steps to perform a combined upgrade of HyperFlex Data Platform and VMware vSphere ESXi. In this process, the HyperFlex nodes will go through an optimized rolling reboot without any workload disruptions by use of VMware vMotion.

Note HyperFlex Edge clusters deployed via Intersight do not have upgrade capability from HyperFlex Connect. The upgrade is only supported through Intersight.

Step 1 Log into HX Connect.

- a) Enter the administrative username and password.
- b) Click **Login**.
- **Step 2** In the Navigation pane, select **Upgrade**.
- Step 3 On the Select Upgrade Type page, select HX Data Platform and ESXi and complete the following fields:
- **Step 4** Upload the HyperFlex Data Platform upgrade package (storfs-package).

Table 1: Upgrade HX Data Platform

UI Element	Essential Information
Drag the HX file here or click to browse	Upload the latest Cisco HyperFlex Data Platform Upgrade Bundle for upgrading existing clusters with previous release.tgz package file from Download Software - HyperFlex HX Data Platform.
	Sample file name format: storfs-packages-4.5.1a-31601.tgz.
Current version	Displays the current HyperFlex Data Platform version.
Current cluster details	Lists the HyperFlex cluster details like the HyperFlex release and cluster upgrade state.
Bundle version	Displays the HyperFlex Data Platform version of the uploaded bundle.
(Optional) Checksum field	The MD5 Checksum number is available by hovering over the filename in the Cisco.com Software Download section. This is an optional step that helps you verify the integrity of the uploaded upgrade package bundle

- **Step 5** Upload the VMware ESXi custom image offline upgrade bundle.
- **Step 6** Provide vCenter login credentials:

Essential Information	Essential Information
User Name field	Enter the vCenter <admin> username.</admin>
Admin Password field	Enter the vCenter <admin> password.</admin>

- **Step 7** Click **Upgrade** to begin the combined upgrade process.
- **Step 8** The Validation screen on the **Upgrade Progress** page displays the progress of the checks performed. Fix validation errors, if any.
 - Note At this point, all pre-upgrade checks and validations are running, along with the initial upgrade stage. Within a few minutes, HX Connect returns and prompts you to confirm and start the second stage of the upgrade. The upgrade is not complete until both steps are performed in the UI. The system should never be left in a state where only the first step of the upgrade is complete.
- **Step 9** The HyperFlex Connect UI refreshes after the first step of the upgrade, and a banner pops up prompting you to provide the UCS and vCenter credentials and start the second stage of the upgrade process. Monitor the upgrade page and confirm that the upgrade is complete.

When upgrade is in progress, you may see an error message **Websocket connection failed.** Automatic refresh disabled. You can either refresh the page or log out and log back in to clear the error message. You can safely ignore this error message. **Note** Proceed to Confirm That Upgrade Is Complete, on page 29 for post upgrade tasks once the upgrade is complete. If the upgrade fails, you can re-try the upgrade or contact Cisco TAC for further assistance.

Post Upgrade Tasks for HyperFlex Edge

After the upgrade is complete and the HyperFlex Edge cluster has been upgraded, log out and log back in to HX Connect to see the upgrade changes.

Step 1 Confirm that the HX nodes match the expected firmware version.

Check the firmware version in the IMC supervisor GUI or Cisco IMC UI to verify for the correct firmware version.

To view the firmware version, in the IMC Supervisor GUI, navigate to the **Systems** > **Firmware Management** tab. See Upgrading Firmware using IMC Supervisor for more details.

Step 2 Log into any controller VM through SSH.

ssh admin@controller_vm_ip

Step 3 Confirm the HyperFlex Data Platform version.

hxcli cluster version

Cluster version: 5.5(1a) Node hx220-m5-node-1 version: 5.5(1a) Node hx220-m5-node-3 version: 5.5(1a) Node hx220-m5-node-2 version: 5.5(1a) Node hx220-m5-node-4 version: 5.5(1a)

Step 4 Verify that the HX storage cluster is online and healthy.

hxcli cluster info|grep -i health

Sample output: healthstate : healthy state: healthy storage cluster is healthy

Step 5 For each browser interface you use, empty the cache and reload the browser page to refresh the HX Connect content.

Stretched Cluster Upgrade

- Overview, on page 39
- Upgrade Guidelines for Stretched Cluster, on page 40
- Upgrading HyperFlex Stretched Cluster Using HX Connect, on page 40
- Upgrading a Witness VM for HXDP Release 5.0(x) and Earlier, on page 42
- Manually Upgrading ESXi for Cisco HyperFlex Stretched Cluster, on page 44
- Configuring Stretched Cluster for UCS FW Upgrade, on page 45

Overview

This section provides information related to upgrading a Cisco HyperFlex Stretched Cluster. The procedure for performing a Stretched Cluster upgrade is similar to the regular HyperFlex cluster upgrade procedure.

Cisco HyperFlex Stretched cluster upgrade process involves upgrading the below 3 components:

- Cisco HyperFlex Data Platform
- VMware vSphere ESXi
- Cisco UCS Server Firmware

You can combine HyperFlex Data Platform and VMware ESXi upgrade in a single combined upgrade for HyperFlex Stretched clusters. Cisco recommends upgrading these 2 components in a combined upgrade from HyperFlex Connect. You can choose to upgrade one or two of these components at a time.

If you prefer to upgrade individual components one at a time, see Upgrade UCS Firmware, HX Data Platform and VMware vSphere - Individual Component Upgrade, on page 23. The component upgrade process for standard cluster and HyperFlex Stretched cluster are the same.

This section describes the steps to perform a combined upgrade of HyperFlex Data Platform and VMware vSphere ESXi. In this process, the HyperFlex nodes will go through an optimized rolling reboot without any workload disruptions by use of VMware vMotion.

Upgrade Guidelines for Stretched Cluster

(

- Important Do not upgrade HyperFlex Stretch clusters to HXDP 5.0(2b) See Software Advisory https://www.cisco.com/ c/en/us/td/docs/unified computing/ucs/sw/SA/sw-advisory-hyperflex-release-5-0-2b.html
 - Upgrade of UCS server firmware is not supported through HX Connect. UCS firmware upgrade must be done manually using Cisco UCS Manager. See Manage Firmware through Cisco UCS Manager.
 - Upgrade of the HyperFlex Witness node is not required when upgrading stretched clusters but is strongly recommended. Refer to the Cisco HyperFlex Software Requirements and Recommendations for the latest witness version available.
 - Hypercheck Health Check Utility— Cisco recommends running this proactive health check utility on your HyperFlex cluster prior to upgrade. For more details, see Hypercheck: Pre-Upgrade Check Tool, on page 7.

Upgrading HyperFlex Stretched Cluster Using HX Connect

Before you begin

- · Complete pre-upgrade validation checks.
- Download the latest *Cisco HX Data Platform Upgrade Bundle for upgrading existing clusters from previous releases*, from Software Download.
- Upgrade Cisco UCS Infrastructure.
- Upgrade UCS server firmware. For more information, see Manage Firmware through Cisco UCS Manager.
- Disable snapshot schedule, on the storage controller VM. SSH to HyperFlex cluster IP and run the command **stcli snapshot-schedule** –**disable** snapshot schedule.
- If DRS is *Enabled* and set to fully automatic mode, the VMs are automatically migrated to other hosts with vMotion.

Note

If DRS is *Disabled*, vMotion the VMs manually to continue the upgrade process when prompted. For more information, see VMware Documentation for Migration with vMotion.

- **Step 1** Log in to HX Connect.
 - a) Enter the administrative username and password.
 - b) Click Login.
- **Step 2** In the Navigation pane, select **Upgrade**.

Step 3 On the **Select Upgrade Type** page, select **HX Data Platform** and **ESXi** and complete the following fields:

Step 4 On the **Select Upgrade Type** page, select **HX Data Platform** and complete the following fields:

UI Element	Essential Information
Drag the HX file here or click to browse	Upload the latest Cisco HyperFlex Data Platform Upgrade Bundle for upgrading existing clusters with previous release.tgz package file from Download Software - HyperFlex HX Data Platform.
	Sample file name format: storfs-packages-4.5.1a-31601.tgz.
Current version	Displays the current HyperFlex Data Platform version.
Current cluster details	Lists the HyperFlex cluster details like the HyperFlex version and Cluster upgrade state .
Bundle version	Displays the HyperFlex Data Platform version of the uploaded bundle.
(Optional) Checksum field	The MD5 Checksum number is available by hovering over the filename in the Cisco.com Software Download section.
	This is an optional step that helps you verify the integrity of the uploaded upgrade package bundle.

Step 5 Upload the VMware ESXi custom image offline upgrade bundle.

Step 6 Provide vCenter login credentials:

Essential Information	Essential Information
User Name field	Enter the vCenter <admin> username.</admin>
Admin Password field	Enter the vCenter <admin> password.</admin>

- **Step 7** Click **Upgrade** to begin the combined upgrade process.
- **Step 8** The Validation screen on the **Upgrade Progress** page displays the progress of the checks performed. Fix validation errors, if any.
 - **Note** At this point, all pre-upgrade checks and validations are running, along with the initial upgrade stage. Within a few minutes, HX Connect returns and prompts you to confirm and start the second stage of the upgrade. The upgrade is not complete until both steps are performed in the UI. The system should never be left in a state where only the first step of the upgrade is complete.
- **Step 9** The HyperFlex Connect UI refreshes after the first step of the upgrade, and a banner pops up prompting you to provide the UCS and vCenter credentials and start the second stage of the upgrade process. Monitor the upgrade page and confirm that the upgrade is complete.

When upgrade is in progress, you may see an error message **Websocket connection failed.** Automatic refresh disabled. You can either refresh the page or log out and log back in to clear the error message. You can safely ignore this error message.

Note Perform post upgrade tasks once the upgrade is complete. If the upgrade fails, you can re-try the upgrade or contact Cisco TAC for further assistance.

Upgrading a Witness VM for HXDP Release 5.0(x) and Earlier

В	efore you begin
<u>_</u>	
Attention	This workflow is for use with existing Stretched Cluster installs (HXDP Release 5.0(x) and earlier). New Stretched Clusters installed using HXDP 5.5(1a) and later will auto-configure an Invisible Cloud Witness for site arbitration. Invisible Cloud Witness automatically runs the latest version, user maintenance of this component is not required.
	• Select the Witness VM version that supports the HXDP version you are upgrading to.
	For supported versions see the HX Data Platform Software Versions for HyperFlex Witness Node for Stretched Cluster section of the Cisco HyperFlex Software Requirements and Recommendations
	for your respective upgrade. • Upgrade HyperFlex Stretched Cluster.
	• The upgraded HyperFlex Stretched Cluster must be in healthy state. To check the health state of Stretched Cluster after upgrade, run the following command:
	root@StCtlVM:~# hxcli cluster info grep healthy
root@Witn Copy the e from where	e witness VM using SSH and execute the following command to stop the service exhibitor. essVM:~# service exhibitor stop whibitor.properties file available in the /usr/share/exhibitor/ path to a remote machine e you can retrieve the exhibitor.properties file.
/usr/shar	<witness-vm-ip>: e/exhibitor/exhibitor.properties user@<remote-machine>: y/exhibitor.properties</remote-machine></witness-vm-ip>
Log out fro	om the Witness VM. Power off and rename the Witness VM to WitnessVM.old.
Note	Confirm that the IP address of the old Witness VM is unreachable, using the ping command.
Deploy a n	ew Witness VM and configure the same IP address as the old Witness VM.
Note	If the IP address is not reachable, the Witness OVA deployment may contain stale entries in the /var/run/network directory. You must manually remove these entries and reboot the VM to have the assigned IP address become reachable on the network.
	To reboot the VM, open the VM console in vCenter/vSphere and execute the following command:

rm -rf /var/run/network/*
reboot

Step 1

Step 2

Step 3

Step 4

Step 5 Log into the new witness VM using SSH and execute the following command to stop the service exhibitor.

root@WitnessVM:~# service exhibitor stop

Step 6 Copy the exhibitor.properties file from the remote machine (copied in Step 2) to the /usr/share/exhibitor/ path of the new Witness VM.

```
scp /directory/exhibitor.properties root@<Witness-VM-IP>:
/usr/share/exhibitor/exhibitor.properties
```

Step 7 Verify if the following symlinks are preserved in the new Witness VM:

root@Cisco-HX-Witness-Appliance:~# cd /etc/exhibitor/ root@Cisco-HX-Witness-Appliance:/etc/exhibitor# ls -al total 8 drwxr-xr-x 2 root root 4096 Sep 11 13:00 . drwxr-xr-x 88 root root 4096 Sep 11 12:55 .. lrwxrwxrwx 1 root root 41 Sep 11 13:00 exhibitor.properties lrwxrwxrwx 1 root root 37 Jul 24 16:49 log4j.properties

If the symlinks are not available, execute the following command:

```
root@Cisco-HX-Witness-Appliance:/etc/exhibitor# ln
-s /usr/share/exhibitor/exhibitor.properties exhibitor.properties
root@Cisco-HX-Witness-Appliance:/etc/exhibitor# ln -s /usr/share/
exhibitor/log4j.properties log4j.properties
root@Cisco-HX-Witness-Appliance:/etc/exhibitor# ls -al total 8
drwxr-xr-x 2 root root 4096 Sep 11 13:00 .
drwxr-xr-x 88 root root 4096 Sep 11 12:55 .
lrwxrwxrwx 1 root root 41 Sep 11 13:00 exhibitor.properties
-> /usr/share/exhibitor/exhibitor.properties
lrwxrwxrwx 1 root root 37 Jul 24 16:49 log4j.properties
-> /usr/share/exhibitor/log4j.pr
```

Step 8 Important Skip this step if your upgrade is an HX Release prior to version 4.5(2a).

Get the cluster UUID value from /etc/springpath/clusteruuid file on any Controller VM and then edit /usr/share/zookeeper/conf/server.jaas.conf and replace HX PLACEHOLDER with Cluster UUID.

Example:

```
On any Storage Controller VM, get the contents of clusteruuid
file -cat /etc/springpath/clusteruuid 5b4f718033594dad:663273adab09777a
On the Witness VM, replace the HX_PLACEHOLDER value with the cluster
UUID -Before -QuorumServer {
        org.apache.zookeeper.server.auth.DigestLoginModule required
        user_hyperflex="HX_PLACEHOLDER";};QuorumLearner {
            org.apache.zookeeper.server.auth.DigestLoginModule required
            username="hyperflex"
            password="HX_PLACEHOLDER";};
After -QuorumServer {org.apache.zookeeper.server.auth.DigestLoginModule
        required user_hyperflex="5b4f718033594dad:663273adab09777a";};
        QuorumLearner { org.apache.zookeeper.server.auth.DigestLoginModule
        required
            username="hyperflex"
            password="Sb4f718033594dad:663273adab09777a";};
```

Step 9NoteThis step is required for users that are moving to Witness VM Node version 1.1.1 and later, if the Witness
VM being upgraded is a version previous to 1.1.1.

Run the /usr/share/springpath/storfs-misc/setexhibitorconfig.sh command to upgrade the Witness exhibitor configuration.

- Note The setexhibitorconfig.sh automates the process of editing the exhibitor.properties file, and replaces all of the data IP addresses with the management IP addresses for each corresponding controller VM.
- **Note** It is normal for this command to not show any output when upgrading from a Witness VM that is older than 1.1.1.

Step 10 Start the service exhibitor by executing the following command: root@Cisco-HX-Witness-Appliance:~# service exhibitor start

exhibitor start/running, process <ID>

Manually Upgrading ESXi for Cisco HyperFlex Stretched Cluster

- **Step 1** Select one of the hosts and put it in HX maintenance mode using the vSphere Web Client. After the host enters maintenance mode, complete the following steps.
- **Step 2** Copy files using SCP, start the SSH service in the destination ESXi hosts as well.

Note

• On HX240, you can use the local SpringpathDS datastore or a mounted HX datastore.

• On HX220, you can use either a mounted HX datastore or create a temporary RAM disk.

scp local filename user@server:/path/where/file/should/go

Step 3 Log into ESXi, and execute the following command to query the list of available image profiles and for profile name verification.

esxcli software sources profile list -d <location_of_the_esxi_zip_bundle_on_the_datastore>

Attention Full path must be used when running the esxcli software command.

Example:

Step 4 Run the following command to perform the upgrade.

esxcli software profile update -d <path to profile ZIP file> -p < profile name>

Example:

[root@HX-ESXi-01:/vmfs/volumes/la234567-89bc1234] esxcli software profile update -d
/vmfs/volumes/la234567-89bc1234/HX-Vmware-ESXi-7.0U3-20328353-Cisco-Custom-7.3.0.10.zip
-p HX-ESXi-7.0U3-20328353-Cisco-Custom-7.3.0.10

Step 5 After the ESXi host comes up, verify that the host has booted up with the correct version.

vmware -vl

Step 6 Exit maintenance mode using the vSphere Web Client.

Step 7 Ensure that the cluster becomes healthy between each ESXi upgrade.

hxcli cluster info [flags]

Step 8 Repeat this process for all hosts in the cluster in a sequence.

Note Make sure that the cluster becomes healthy between each ESXi upgrade.

Configuring Stretched Cluster for UCS FW Upgrade

During upgrade, the following customized UCS policies are validated and adjusted for HyperFlex:

- HFP (Host Firmware Package) Host Firmware Packages provide consistent firmware files for the multiple components of a HyperFlex node. This includes CIMC, BIOS, HBA and SAS Expander firmware, VIC and other components. Unlike typical UCS Host Firmware Packages, they also control disk firmware, due to the criticality of this to HyperFlex Data Platform. Note that Self Encrypting Drives (SED) firmware is controlled by HyperFlex Data Platform directly and not UCS Manager policies.
- VNIC Templates Virtual NIC (VNIC) templates provide consistent configuration of VNIC's between UCS fabrics. HyperFlex VNIC Templates are configured as redundancy pairs to ensure changes to HyperFlex VNIC's on one UCS fabric is applied to the other.
- Ethernet Adaptor Policies Ethernet Adaptor Policies provide performance related properties for HyperFlex VNIC's.
- BIOS Policies BIOS policies control configuration and performance of key hardware resources on a HyperFlex node, such as CPU and Memory. HyperFlex uses specific configuration to provide consistent high performance.
- VNIC/VHBA Placement Policies VNIC/VHBA placement policies determine the PCI addresses presented to the HyperFlex node for a given VNIC/VHBA. HyperFlex sets this in a consistent manner so further configuration can proceed successfully.

```
Step 2 Use the su diag Enter into the diag shell on a storage controller VM.<sup>1</sup>
```

- **Step 3** Run the following command: /usr/local/bin/hx.py --upgrade-cluster-config. This generates a file called "customer_site_config.json" and saves it in the /tmp directory.
- **Step 4** Edit the customer_site_config.json file to change the firmware version and the org name appropriately. For example:

Example:

"id": "Advanced", "collapse": true, "label": "Advanced",

Step 1 SSH to any CVM on a site and change directory into /tmp

¹ HXDP Release 5.0(2a) and later support the su diag command. For more information, see the Diag User Overview.

```
"groups": [
     {
       "id": "firmware",
       "label": "UCS Firmware",
        "items": [
          {
           "id": "version",
           "label": "UCS Firmware Version",
           "type": "text",
            "description": "UCS Firmware Version to be used on the HX servers",
            "placeholder": "ex: 3.2(2d)",
            "defaultValue": "3.2(2d)",
            "value": "4.1(1d)" #<<<<<---- Change this
          },
          {
            "id": "version-m5",
            "label": "UCS Firmware Version",
            "type": "text",
            "description": "UCS Firmware Version to be used on the M5 HX servers",
            "placeholder": "ex: 3.2(2d)",
            "defaultValue": "3.2(2d)",
            "value": "4.1(1i)" #<<<<----- Change this
          }
       ]
     },
      {
       "id": "org",
       "items": [
                  {
                       "id": "name",
                       "label": "Hyperflex Org name",
                        "type": "text",
                        "value": "Faridabad", #<<<<---- Change this
                       "description": "The name of the org in ucsm which is to be used for creation
of all the policies and profiles for this Hyperflex cluster"
                 }
       ]
     }
    1
Execute the command again and enter the UCSM IP and credentials.
For example:
/usr/local/bin/hx.py --upgrade-cluster-config
Example:
[root@SpringpathControllerVPORX5DWTC:/# /usr/local/bin/hx.py --upgrade-cluster-config
```

```
root@SpringpathControllerVPORX5DWTC:/# /usr/local/bin/hx.py --upgrade-cluster-config
[UCS Manager] [in_progress][ 0.00%][ETA: 0:18:00] Login to UCS API
UCS host name or virtual IP address: 10.42.17.11
Connecting to admin@10.42.17.11...
Password:
```

Step 6 Ensure that the command runs without any error. If there is an error, contact Cisco TAC.

Note Note that this command (hx.py) is being run for the first site FI domain. You need to run the same steps for the second site FI domain later.

- **Step 7** Perform the following steps in vCenter and UCSM:
 - a) Verify that Pending reboot appears in the pending activities of the UCSM.
 - b) Put one host in maintenance mode.
 - c) Reboot the server and then wait for the server to come online and cluster to be online/healthy.

Step 5

- d) Perform the same steps for the remaining nodes.
- **Step 8** Repeat Steps 4, 5 and 6 again for the other site.

HyperFlex Offline Upgrade Workflow

- Online Upgrade of HyperFlex Data Platform Software Only Using CLI, on page 49
- Offline Upgrade Guidelines, on page 52
- Offline Upgrade Process Workflow, on page 52
- Offline Upgrade Using CLI, on page 53

Online Upgrade of HyperFlex Data Platform Software Only Using CLI

4

Attention Cisco recommends upgrading the HyperFlex cluster using HyperFlex Connect UI. The procedure below lists the commands used for upgrading the HyperFlex cluster using CLI.

- 1. If UCSM (A-bundle) or UCS Server Firmware (C-bundle) upgrade is required, download Cisco UCS Infrastructure A, blade bundle B, and rack bundle C. See Software Download.
- 2. Upgrade Cisco UCS Infrastructure bundle as required. See Upgrade UCS Infrastructure Firmware, on page 16.
- 3. Log into CIP-M of the cluster with admin access and create a tmp directory i.e. /home/admin/tmp.
- 4. Copy the target storfs-package-<>.tgz to the tmp directory.
- 5. Copy the target Hypervisor upgrade bundle to the tmp directory.
- 6. Use stcli cluster upgrade --h command to check the usage of the command.
- 7. Use --dryrun to check if all the inputs to the command and upgrade compatibility before the actual upgrade initiates.
- 8. Perform the actual upgrade and follow the details mentioned in the following examples:

Note

- Step 1 and step 2 are required if UCS infra and UCS Server f/w upgrade need to be performed.
 - Step 5 is required if the Hypervisor upgrade needs to be performed.

Combined Upgrade of Cisco HX Data Platform, ESXi and Cisco UCS Firmware

M6 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor -location
/home/admin/tmp/<storfs package name> --hypervisor-bundle
/home/admin/tmp/<ESXi package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucsm6-fw-version <UCSM Firmware Version>
--vcenter-user administrator@vsphere.local
```

M6 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --hypervisor-bundle
/home/admin/tmp/HX-ESXi-6.7U3-17700523-Cisco-Custom-6.7.3.16-upgrade-bundle.zip
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucsm6fw-version '4.2(1i)'
--vcenter-user administrator@vsphere.local
```

M5 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor
--location /home/admin/tmp/<storfs package name> --hypervisor-bundle
/home/admin/tmp/<ESXi package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucsm5-fw-version <UCSM Firmware Version>
--vcenter-user administrator@vsphere.local
```

M5 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --hypervisor-bundle
/home/admin/tmp/HX-ESXi-6.7U3-17700523-Cisco-Custom-6.7.3.16-upgrade-bundle.zip
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucsm5fw-version '4.2(1i)'
--vcenter-user administrator@vsphere.local
```

M4 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor -location
/home/admin/tmp/<storfs package name> --hypervisor-bundle
/home/admin/tmp/<ESXi package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucs-fw-version <UCSM Firmware Version>
--vcenter-user administrator@vsphere.local
```

M4 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --hypervisor-bundle
/home/admin/tmp/HX-ESXi-6.7U3-17700523-Cisco-Custom-6.7.3.16-upgrade-bundle.zip
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucs-fw-version '4.2(1i)'
--vcenter-user administrator@vsphere.local
```

Combined Upgrade of Cisco HX Data Platform and ESXi

M6/M5/M4 Clusters:

```
# stcli cluster upgrade --components hxdp,hypervisor -location
/home/admin/tmp/<storfs package name> --hypervisor-bundle
/home/admin/tmp/<esxiupgrade_bundle.zip> --vcenter-user administrator@vsphere.local
```

Example:

```
~# stcli cluster upgrade --components hxdp,hypervisor -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --hypervisor-bundle
/home/admin/tmp/HX-ESXi-6.7U3-17700523-Cisco-Custom-6.7.3.16-upgrade-bundle.zip
--vcenter-user administrator@vsphere.local
```

Combined Upgrade of Cisco HX Data Platform and Cisco UCS Firmware

M6 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp -location
/home/admin/tmp/<storfs package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucsm6-fw-version <UCSM Firmware Version>
--vcenter-user administrator@vsphere.local
```

M6 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin
--ucsm6fw-version '4.2(li)' --vcenter-user administrator@vsphere.local
```

M5 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp --location
/home/admin/tmp/<storfs package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucsm5-fw-version <UCSM Firmware Version>
    --vcenter-user administrator@vsphere.local
```

M5 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp -location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --ucsm-host
eng-fil6.eng.storvisor.com --ucsm-user admin --ucsm5fw-version
'4.2(1i)' --vcenter-user administrator@vsphere.local
```

M4 Clusters:

```
# stcli cluster upgrade --components ucs-fw,hxdp --location
/home/admin/tmp/<storfs package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucs-fw-version <UCSM Firmware Version>
--vcenter-user administrator@vsphere.local
```

M4 Example:

```
~# stcli cluster upgrade --components ucs-fw,hxdp --location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --ucsm-host eng-fil6.eng.storvisor.com
--ucsm-user admin --ucs-fw-version '4.2(1i)' --vcenter-user administrator@vsphere.local
```

Upgrade of Cisco HX Data Platform

M6/M5/M4 Clusters:

```
# stcli cluster upgrade --components hxdp --location /home/admin/tmp/<storfs
package name> --vcenter-user administrator@vsphere.local
```

Example:

```
~# stcli cluster upgrade --components hxdp --location
/home/admin/tmp/storfs-packages-5.0.1a-40733.tgz --vcenter-user administrator@vsphere.local
```

Upgrade Cisco HX Data Platform Only Using GUI

Start upgrade of HX Data Platform only. See Upgrade Cisco UCS Firmware, HX Data Platform, and VMware vSphere Workflow.

Upgrade Cisco UCS Firmware Only Using GUI

Start upgrade of UCS firmware only. See Upgrade UCS Infrastructure Firmware.

Offline Upgrade Guidelines

Important Offline upgrade can be performed from HX Connect UI for either combined or split upgrade. Before you proceed, consider following guidelines: Cisco recommends performing online upgrade from HX Connect UI for hitless upgrade experience without any impact operations. Offline upgrade requires the cluster to be shutdown. Offline cluster upgrades require the node(s) to reboot. Applications running on the cluster during an offline upgrade are impacted because they do not have access to the HyperFlex storage during the cluster reboot. Nodes are upgraded with the new version of the Cisco HX Data Platform software and rebooted one at a time. Offline cluster upgrades with nested vCenter is not supported.

Offline Upgrade Process Workflow

Step	Description	Reference
1.	If UCSM (A-bundle) or UCS Server Firmware (C-bundle) upgrade is required, download Cisco UCS Infrastructure A, blade bundle B, and rack bundle C.	Software Download
2.	Upgrade Cisco UCS Infrastructure bundle as required.	Upgrade UCS Infrastructure Firmware, on page 16
3.	Launch the vSphere Web Client and power down all user VMs (HyperFlex Controller VMs should stay powered on) residing on HX servers and all user VMs running on HX datastores. This includes VMs running on Compute-only nodes. After the VMs are shut down, verify the health state of the cluster and perform a graceful shutdown.ImportantHyperFlex controller VMs (stCtlVMs) must remain powered on.	For more details, see Shut Down and Power Off the Cisco HX Storage Cluster.
4.	(Optional) SSH to cluster management IP as admin user and disable the snapshot schedule.	Run the command stcli snapshot-scheduledisable.

Step	Description	Reference
5.	Log into HX Connect as admin user and perform either a combined upgrade or an individual component upgrade.	For a combined upgrade see Upgrading HyperFlex Data Platform Software, VMware ESXi, and Cisco UCS Server Firmware using HX Connect, on page 19. For an individual component upgrade see Overview.
6.	Confirm the upgrade is complete and perform the post upgrade tasks .	Post Upgrade Tasks, on page 29
7.	Start the cluster.	Preparing for HX Storage Cluster Maintenance
8.	(Optional) Enable snapshot schedule if it was disabled previously in step 4.	Run the command stcli snapshot-scheduleenable.

Offline Upgrade Using CLI

C-

Important

If you need to perform a split upgrade, you must upgrade HX Data Platform first. After HX Data Platform is upgraded to Release 3.5(1x), you can perform a split upgrade of UCSM only and/or ESXi only.

Note Please make sure to update the UCS firmware version in all examples to the recommended version in the Release Notes.

Combined Upgrade of Cisco HX Data Platform, ESXi and Cisco UCS Firmware

M6 Servers

```
# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor --location /tmp/
<storfs package name> --hypervisor-bundle /tmp/<ESXi package name> --ucsm-host <IP/FQDN of
UCSM>
--ucsm-user <UCSM User> --ucsm6-fw-version <UCSM Firmware Version>
```

Example for M6 Servers:

```
~# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor --location
/tmp/storfs-packages-5.0.1a-19712.tgz --hypervisor-bundle /tmp/ESXi-6.7-U3-offline-bundle.zip
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucs6fw-version '4.0(2g)'
```

M5 Servers

```
# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor --location /tmp/
<storfs package name> --hypervisor-bundle /tmp/<ESXi package name> --ucsm-host <IP/FQDN of
UCSM>
--ucsm-user <UCSM User> --ucsm5-fw-version <UCSM Firmware Version>
```

Example for M5 Servers:

~# stcli cluster upgrade --components ucs-fw,hxdp,hypervisor --location
/tmp/storfs-packages-4.5.1a-19712.tgz --hypervisor-bundle /tmp/ESXi-6.7-U3-offline-bundle.zip
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucs5fw-version '4.0(2g)'

M4 Servers

```
# stcli cluster upgrade --components ucs-fw, hxdp, hypervisor --location/tmp/
<storfs package name, ESXi package name> --ucsm-host <IP/FQDN of UCSM>
--ucsm-user <UCSM User> --ucsfw-version <UCSM Firmware Version>
```

Example for M4 Servers:

```
~# stcli cluster upgrade --components ucs-fw, hxdp, hypervisor --location
/tmp/storfs-packages-4.5.1a-19712.tgz
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucsfw-version '4.0(2g)'
```

Combined Upgrade of Cisco HX Data Platform and ESXi

M5 Servers

```
# stcli cluster upgrade --components hxdp,hypervisor --location /tmp/
hxupgrade bundle.tgz --hypervisor-bundle /tmp/esxiupgrade bundle.zip
```

Example for M5 Servers:

~# stcli cluster upgrade --components hxdp,hypervisor --location /tmp/ hxupgrade bundle.tgz --hypervisor-bundle /tmp/esxiupgrade bundle.zip

M4 Servers

stcli cluster upgrade --components hxdp,hypervisor --location /tmp/ hxupgrade bundle.tgz --hypervisor-bundle /tmp/esxiupgrade bundle.zip

Example for M4 Servers:

~# stcli cluster upgrade --components hxdp,hypervisor --location /tmp/ hxupgrade bundle.tgz --hypervisor-bundle /tmp/esxiupgrade bundle.zip

Combined Upgrade of Cisco HX Data Platform and Cisco UCS Firmware

M5 Servers

stcli cluster upgrade --components hxdp,ucs-fw --location/tmp/ <storfs package name> --vcenter-user <vcuser> --ucsm-host <IP/FQDN of UCSM> --ucsm-user <UCSM User> --ucsm5-fw-version <UCSM Firmware Version>

M4 Servers

stcli cluster upgrade --components hxdp,ucs-fw --location/tmp/ <storfs package name> --vcenter-user <vcuser> --ucsm-host <IP/FQDN of UCSM> --ucsm-user <UCSM User> --ucsfw-version <UCSM Firmware Version>

Example for M4 Servers:

```
~# stcli cluster upgrade --components hxdp,ucs-fw --location
/tmp/storfs-packages-1.8.1c-19712.tgz --vcenter-user administrator@vsphere.local
--ucsm-host eng-fil6.eng.storvisor.com --ucsm-user admin --ucsfw-version '3.1(2b)'
```

Manual Pre-Upgrade Validations

- Overview, on page 55
- Checking Cluster Storage Capacity, on page 55

Overview

This section describes the manual pre-upgrade validations if you are unable to run the Hypercheck Health Check described in Hypercheck: Pre-Upgrade Check Tool, on page 7. Running Hypercheck is highly recommended over performing these checks manually.

Checking Cluster Storage Capacity

Cisco recommends that you check the cluster storage capacity before starting the upgrade of an existing installation of Cisco HX Data Platform. If the storage utilization in the cluster is above 70%, the upgrade validation fails.

When storage utilization in the cluster is above 70%, an offline upgrade is recommended.

Refer to the *HX Storage Cluster Overview* chapter in the Cisco HyperFlex Data Platform Administration Guide for background details about checking cluster storage capacity.

HyperFlex Upgrade Troubleshooting

- VMs Do Not Migrate During Upgrade, on page 57
- ESXi Host or HyperFlex Controllers In Lockdown Mode, on page 58
- Connection to HX Connect Lost During Upgrade, on page 58
- Failed to Upgrade HyperFlex VIBs, on page 59
- Upgrade to HyperFlex version 4.5 Failed with Could not open /vmfs/volumes/hxmigrate Error, on page 59
- HX Connect UCS Server Firmware Selection Dropdown Doesn't List the Firmware Version 4.1 or Above, on page 60
- Upgrade Fails in the Step Entering Cluster Node into Maintenance Mode, on page 60
- Maintenance Mode Not Automatic for Cluster Containing VMs with vGPUs Configured, on page 61

VMs Do Not Migrate During Upgrade

Description

Upgrading ESXi cluster fails with error "Node maintenance mode failed". This occurs in an online and healthy ESXi cluster where DRS and HA is enabled.

Action

Try the following workarounds in the following order:

- 1. If HA admission control policy is enabled and set to slot policy, change it to cluster resource percentage to tolerate one host failure and then retry upgrade.
- 2. Disable HA admission control policy or disable HA and then retry upgrade.
- **3.** Try powering off a few VMs to make sure there is enough failover capacity in the cluster to tolerate at least one node failure and then retry upgrade.

ESXi Host or HyperFlex Controllers In Lockdown Mode

Description

If the ESXi host is in lockdown mode, pre-upgrade validation will fail with the error message auth cancel.

Action

Enable/Disable Lockdown Mode mode on the ESXi host and enable it after the upgrade is successful.

Using HyperFlex Controller VMs

- 1. Log into HX Connect.
- 2. On the Navigation pane, select System Overview.
- **3.** On the **System Overview** tab, from the **Actions** drop-down list, you can enable or disable access to the controller VM using SSH as an administrator.

Using ESXi Hosts

- 1. Log into vSphere Web Client.
- 2. Browse to the host in the vSphere Web Client inventory.
- 3. Click the Manage tab and click Settings.
- 4. Under System, select Security Profile.
- 5. In the Lockdown Mode panel, click Edit.
- 6. Click Lockdown Mode and set the mode to Disabled.

Connection to HX Connect Lost During Upgrade

Description

Connection to HX Connect lost after pre-upgrade step from HX 3.5(2g) to HX 4.0(2a). During the upgrade, if there is an expired certificate in the upgrade source version, the browser will log user out after pre-upgrade step. This is accepted secure behavior since the certificate of the server has changed after pre-upgrade.

Action

Refresh the browser and login again.

Failed to Upgrade HyperFlex VIBs

Description

HXDP Upgrade to HX 4.5(1a) or above fails with error - "Failed to upgrade HyperFlex VIBs . Reason: Some(System error)".

The following error logs appear in the ESXi esxupdate.log file:

```
2020-12-01T11:59:22Z esxupdate: 333049: root: ERROR:
vmware.esximage.Errors.LiveInstallationError: ([], '([], "Error in running rm
/tardisks/scvmclie.v00:\\nReturn code: 1\\nOutput: rm: can\'t remove
\'/tardisks/scvmclie.v00\': Device or resource busy\\n\\nIt is not safe to continue. Please
reboot the host immediately to discard the unfinished update."
```

Action

Follow these steps to kill the process corresponding to getstctlvmlogs and retry the upgrade.

- 1. SSH to ESXi with root login.
- 2. Run the command ps -c | grep -e cisco -e springpath and note the process ID (PID). For example:

ps -c | grep -e cisco -e springpath

112056 112056 sh /bin/sh /opt/springpath/support/getstctlvmlogs

3. Kill the process using the command kill -9 <PID from previous command>. For example:

kill -9 112056

4. Go back to HX Connect or Intersight and retry the upgrade. If the issue still persists, please contact Cisco TAC for assistance.

Upgrade to HyperFlex version 4.5 Failed with Could not open /vmfs/volumes/hxmigrate Error

Description

HyperFlex Data Platform upgrade from pre-4.5 to 4.5 or later version Failed.

Error: stdout:, stderr: Could not open /vmfs/volumes/hxmigrate Error: No such file or directory.

Conditions

The ESXi node was rebooted manually during the autmatic Datastore migration as part of HX Data Platform upgrade. This could affect the cluster which has one or more M4 converged nodes or any generation compute only node booting from SD card.

Action

Retry the Upgrade.

HX Connect UCS Server Firmware Selection Dropdown Doesn't List the Firmware Version 4.1 or Above

Description

When you try to perform a combined upgrade from the HX Connect UI, the dropdown to select UCS server firmware doesn't show version 4.1 or later.

Action

Log into UCS Manager and confirm you have uploaded the UCS B and C firmware bundles to the Fabric Interconnect. If not, upload them and re-try the upgrade. If the UCS B and C firmware bundles are already uploaded to the Fabric Interconnect, apply below workaround to continue with upgrade.

- 1. From the HX Connect upgrade page, select HX Data Platform only.
- 2. Browse and select the appropriate HXDP upgrade package for your upgrade.²
- 3. Enter your vCenter credentials.
- 4. Click Upgrade. This will bootstrap the management components. Refresh the UI screen.
- 5. Once the UI is refreshed, try the combined upgrade procedure. You should now be able to see the UCS server firmware version 4.1 or above listed in the dropdown menu.

Upgrade Fails in the Step - Entering Cluster Node into Maintenance Mode

Description

Failure at the **Entering Cluster Node into Maintenance Mode** step is caused because of a MTU mismatch in the vSwitch and port-groups. If the cluster has a node that was added at a later point using the node expansion method, the newly added node may have the MTU set to 9000 while other nodes are set to MTU 1500.

Note

Below remediation is applicable only if your cluster has one or more nodes that were added as part of a cluster expansion, and they have the MTU set to 9000 while your original cluster nodes are set at a MTU of 1500. If this is not the scenario, please contact TAC for further assistance.

² The version must be HXDP 4.5 or later.

Action

- · Log into vCenter.
- · Check and confirm the MTU value set on all nodes.
- If the nodes that were part of the originally built cluster are set at a MTU of 1500 and some of the other nodes (nodes added later as part of cluster expansion) have the MTU set to 9000, change the MTU on all such nodes to 1500.
- Retry the upgrade.

Maintenance Mode Not Automatic for Cluster Containing VMs with vGPUs Configured

Description

For clusters that contain VMs with vGPUs configured, entering maintenance mode does not occur automatically even with DRS fully enabled. During rolling upgrades, it is necessary to manually handle these VMs to ensure that each ESXi host can enter maintenance mode and continue with the upgrade at the appropriate time.

Action

You can use one of these methods to proceed forward:

- 1. Manually vMotion the vGPU configured VMs to another ESXi host in the cluster.
- 2. Temporarily power off the vGPU configured VMs. They can be powered on again after the ESXi host reboots and rejoins the cluster

Note This is a limitation of DRS host evacuation and is documented, see "DRS fails to migrate vGPU enabled VM's automatically (66813) topic" on the VMware documentation site.
