## About the Cisco Vulnerability Database

The Cisco vulnerability database (VDB) is a database of known vulnerabilities to which hosts may be susceptible, as well as fingerprints for operating systems, clients, and applications. The system uses the VDB to help determine whether a particular host increases your risk of compromise.

Cisco issues periodic updates to the VDB. The time it takes to update the VDB and its associated mappings on the Firepower Management Center depends on the number of hosts in your network map. As a rule of thumb, divide the number of hosts by 1000 to determine the approximate number of minutes to perform the update.

You can find VDB updates on the [VDB Software Downloads page](#) on Cisco.com.

# About the Cisco Firepower Application Detector Reference

The *Cisco Firepower Application Detector Reference* contains the release notes and information about the application detectors supported in the VDB release. For each application listed in the reference, you can find the following information:

- **Description**—A brief description of the application.
- **Categories**—A general classification for the application that describes its most essential function. Example categories include web services provider, e-commerce, ad portal, and social networking.
- **Tags**—Predefined tags that provide additional information about the application. Example tags include webmail, SSL protocol, file sharing/transfer, and displays ads. An application can have zero, one, or more tags.
- **Risk**—The likelihood that the application is used for purposes that might be against your organization's security policy. The risk levels are Very High, High, Medium, Low, and Very Low.
- **Business Relevance**—The likelihood that the application is used within the context of your organization's business operations, as opposed to recreationally. The relevance levels are Very High, High, Medium, Low, and Very Low.

# Supported Platforms and Software Versions

This guide relates to Vulnerability Database Updates installed via the following software versions on the following platforms:

## **Sourcefire 3D System/Firepower System Version 5.x:**

- Cisco FireSIGHT Management Centers (formerly Defense Centers)

## **Firepower Version 6.x:**

- Cisco Firepower Management Centers (formerly Defense Centers/FireSIGHT Management Centers)

## Supported Detector Types

The following Detector Types are supported:

- application protocol
- client
- web application

# Total Applications Supported in Vulnerability Database Update 339

Cisco Vulnerability Database (VDB) Update 339 supports 3,593 applications.

# Vulnerability Database Update 339 Changelog

This section describes the changes from VDB 338 (1:00:29 PM on September 24th, 2020 UTC) to VDB 339 (9:41:10 PM on November 5th, 2020 UTC).

## For Assistance

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information about Cisco Firepower devices, see What's New in [Cisco Product Documentation](#).

Subscribe to What's New in Cisco Product Documentation, which lists all new and revised Cisco technical documentation, as an RSS feed and deliver content directly to your desktop using a reader application. The RSS feeds are a free service. If you have any questions or require assistance with Cisco ASA devices, please contact Cisco Support:

- Note: To open a TAC request, you must first register for a Cisco.com user ID
- Once you have a Cisco.com user ID, you may initiate or check on the status of a service request [online](#) or contacting the TAC by phone:
